the order desk again. Once again they had no record of the order or my
letter. This is close to two months after the original order and the
solution is once again - send another copy of my visa statement to them.

This seems to be a little too much - by the time I pay for the calls, mail
etc the costs are going to be quite high and I am looking at no resoulution
for 2 - 3 more weeks perhaps. Is this a common problem with the ARRL
publications group in others' experience? I would have to say I could not
recommend this method of ordering to anyone else esp when I am billed but
there is no record of the order even.

Surely it is better to find the mic gain pot inside the rig and just
turn it down slightly? I am not familiar with that type of HT but

can't imagine Yaesu have left out that setting from the mic circuit.

>the complaining, do something, be somebody.

This strikes me as a very good point. In CT we have a very
solid repeater club. They run a great repeater, we have a few
foxhunters, and a few packeteers. The membership seems to be
looking for more activities, but the club is interested in running
repeaters. Point being... the club has no responsibility to meet
any other needs. There is no implicit democratic structure, and if
you don't like it, find a club that fits your needs.

You will find a different make-up from club to club, and finding
one that does the things of interest to you will (may) take time.
I recommend asking some current members about activities, support,
rules, and organization prior to shelling out any cash. If you do
join and don't like it, just let your membership lapse. pretty simple.

Subject: OMNI-V and grounding problem?

First, the background for my story:

Second story ham shack, no cold water pipes, about 20'
to nearest Earth ground, maybe more.

Antenna is a dipole in the attic, just overhead. Don't
worry, I keep to QRP.

Equipment:

Ten Tec 961 power supply, Ten Tec OMNI V, MFJ-949 tuner,
MFJ-931 arti ground with counterpoise wire.

Symptoms:

With radio, power supply, and tuner in use, no ground braid,
touching the front (bare aluminum) of the case causes the
Power output meter (and reflected power AND Ic) to increase.

Transmitting into the dummy load results in no fluctuations
when touching the case.

When the ground braid is hooked up, joining the radio, power
supply, tuner, and arti ground (no counterpoise hooked up yet)
the problem is still present, except that simply touching ANY
portion of the ground braid causes the fluctuation to occur.

Obviously, it's not that any part of the case is floating.

CONTINUING: HOOKED UP THE ARTI GROUND...

Tune for maximum ground current, and when achieved, the
case should be "at relative zero potential." Touching
the case STILL has an effect on the meter. Actual power
output (forward) at the tuner is not affected, although
the rig shows higher forward AND reverse power and a
higher Ic.

If one fiddles with the arti ground capacitance controls,
it can usually be set such that touching the ground system
has little or no effect on the measured quantities, but
this is NOT at maximum ground current (no even close).

Obviously, my body's stray capacitance is changing the
characteristics of the "ground" system. But why would
the meter care? Obviously it would, and the radio's
circuits would "see" something changing and react. Any
guesses what's actually happening here?

Technical replies are welcome, the more the better.

I think what you are talking about is "Trunked Land mobile radio." It is
a system by which many users can share a group of freqs by having a computer
at the transmitter control which freqs the radios use. They all listen to
a data channel for instructions from the head unit. That way fire, rescue,
police, etc can share 5-10 freqs and fully utilize them (and selectively
intercommunicate) instead of having 25-50 separate rarely-used freqs laying
around. Cell phone technology is very similar to trunked systems. See the
description in Radio Shack's "Police Call".

The advanced written test is much longer and has more technical questions.
If you pass the advanced written, the extra written should be quite simple.
The code tests for both are the same level of difficulty.

Jeff,
I took the advanced 19 years ago and the extra 7 years ago.
I currently VE in my area. In my opinion (IMHO), I think the advanced
is more technical and the extra is more operational. I think the
questions, or at least most of them, on the extra test are rediculous,
but took me longer to learn because I don't think I ever heard of them before
nor have I used them since ;-).

The Advanced is harder in my opinion. More hard theory. The VE rule
questions on the Extra are more 'common sense' than the rule questions on
the Advanced.

Now if I could just get that 20wpm
Galen, KF0YJ

Date: 18 Oct 1994 15:27:11 GMT
From: ham@wam.umd.edu (Scott Richard Rosenfeld)
Subject: Which is harder ADVANCED OR EXTRA TEST? The Advanced.

The Advanced exam is MUCH harder than the Extra exam. Heavy on the
circuit analysis and calculations/formulae, light on the theory.

As an Advanced class, your privileges are pretty similar to the
General privs. But when you get to Extra, there's a significant
jump, such as being able to launch satellites, be a VE for all
classes, etc. Anyway, the General to Advanced jump is just a written
test. Advanced to Extra is a two-parter, kind of a "double-filter"
if you will.

Advanced is much more difficult than Extra.

From: kebsch@pdb.sni.de
Message-ID: <385i4i$p79@nanette.pdb.sni.de>
Source record: 258105

Hi,

I am looking for a good logbook program (shareware?). It should run with
MS-Windows 3.x. If there is a super great MS-DOS version available .., Ok!

(Sorry for my English :-)

It should have this features:

+ Operator profile

+ Logbook Data Entry

Callsign, Date, Time (from/to), Frequency (or Band), Mode, Report, Power,
Name, QTH,
QSL exchange: Y/N
Yes: via Bureau
via Manager: Callsign
Direct: Callbook or Address (data entry),
QSL: sent/received
Notes: 'unlimited entry' would be fine
Default entries: Date (Time(s)?), Band, Mode, Power, QSL-ing.
Would be nice:
+ last QSO at (-/date, band or freq.)
+ good for dxcc, iota, ..
+ powerfull interface to a callbook CD
+ radioclub station logbook: operator is: Callsign (+ Name)

+ Logbook Data Management: Modify, Delete, QSL(-ing), etc. ...

Very important for me are configurable listings (screen, printer, to file)

+ which data I wish to see (Callsign, date, frequency, QSL-ing, ..)
+ show it at position ..
+ in order of (Callsign, date, frequency, QSL-ing, ...)
+ date window: from .. to
+ prefix window: only that prefix, from .. to .., lists (from .. to ..)
+ frequency/band window: only that band, lists (ie.: 20,17,15)
+ QSL-ing windows: QSL-ing via bureau
QSL-ing via manager
QSL-ing direct
+ QSL window: sent/received
+ award window ("let me see DXCC or IOTA or ..")

=> => window combinations should be possible!

+ Data Backup Feature
+ Data Interface: listing to file :-)

Any recommendation? :-)

Have fun ..
Waldemar

Sure, nothing wrong with that, but it seemed Mike was complaining
that the repeater users were preventing him from DXing. That sounds
like he intended to use the repeater frequency for simplex communications.

>guess what ..... LASER DOPPLER RADAR. Raytheon may be awarded this project.

Laser doppler radar *does* exist, and is being used by a few US police departments. (I've handled one of the units used by the Georgia State Patrol.) This is totally different from the old VASCAR time and distance equipment. However, local TV doppler weather radar is *not* laser, it's Ka band equipment manufactured by Harris. (I service this stuff.) The FAA windshear measuring radar is also *not* laser. It's UHF RF at 449.0 MHz (right in the amateur 70 cm band's repeater input segment, not pretty).

The laser speed measuring doppler radar unit I handled has a TV camera sensitive to the IR frequency used by the laser unit as an aiming device. You can clearly see the spot reflected off the car in the viewfinder. The unit is setup so the officer can videotape the bust. The speed reads out in characters keyed into the video picture. If you try to stealth the car, it's obvious in the camera viewfinder, and all the officer has to do is move the point of aim slightly, to a piece of chrome, the windshield, a headlight, a parking light reflector, etc until he sees the spot reflection, then he's got you.

The only way I can see to beat this system is an active IR jammer. It'd have to be really powerful too because even a functioning headlight, which pumps out lots of IR, won't blind the system.

One way broadcasts are prohibited except under certain restricted
conditions. Your proposed use doesn't fall into that category.
You *could* be in a two way contact with another amateur and
talk *about* things you'd like to tell your brother-in-law. If
he *happened* to be listening, he'd get the message. Now this
is called a strawman transaction under the law, but it's unlikely
the FCC would prosecute.

>Whatsgoinon?!

Most repeater controllers mask inputed Touchtones (tm). This is to
provide a bit of security for control functions of the repeater that
may be entered on the input frequency. That makes TT signaling schemes
via repeater fail.

Source record: 258194

This is a "known" problem with TS-120S transceivers. Contact Kenwood and they will send you a sheet explaining the problem and giving you the "fix" for it. It involves changing a couple of diodes, moving a couple of wires, and installing a small capacitor. Apparently the problem is caused by the diodes aging.

>What can be done? Has anyone else had (and solved) a similar problem.
>Please, no comments about calling the FCC, since they certainly would be

Good luck. I had some fierce QRM (nor QRN... N=natural, M=manmade)
a few months ago. I called the power company and made a point of NOT
mentioning the fact I was a ham. I told them it was interfering with
the TV (oh my GOD!!) and the AM bdcst band. The investigator was out
3 days later, and a week after that a crew came out and replaced
the lightning arrestor on the pole. They even gave me the bad arrestor.
At that time I told them I was a ham and described how bad the QRM
was on the amateur bands.

Three weeks later the problem resurfaced. I have called a few times
to complain but have not been given the time of day. I believe they
put amateur band QRM complaints on very low priority.

If you're getting interference on your tv set, you're in luck. Play
that up when you complain and don't mention you're an amateur radio
op!

First just about any electronics store in Causeway Bay or in Kowloon
will have ham Hts, sconners, and the like. There is also a good
electronics area called Sham Shui Po. I have been to HK to by
electronics and my friends have bought ham gear there. Go ahead and
bargin with the dealers and make sure you get what you want.

There is no rule as to what color the lights turn. Some communities
have set it up so that the lights in all direction turn red. This stops
all traffic and the emergancy vehicles can drive on through without to
much fear of an idiot thinking he can beat the lights.

When a friend of mine couldn't get help from the power company, he
wrote a letter to the FCC outlining the problem and copied the CEO
of the power company. I assume the FCC was too busy to act on the
letter, but someone at the main office of the power company
saw the copy of the letter and the power company fixed the problem.
This was a large, regional power company, but a similar technique
might work for a city power company.

>Radio Service. If you want to be bigoted, I won't try to stop you. But,
>for everybody's sake, keep your ignorance and hatred to yourself.

This is a bunch of crap. Ignorance and hatred? Come on, you fool, its not ignorance and hatred, its pure and simple disgust at the thought of someone being perverted and the system allowing, no forcing others to accept that perversion as socially acceptable behavior. You faggots are doing something that goes against every conceivable law, whether it be moral, natural, biological, legal, or religious. I don't hate you, I don't hate anyone. Hate is what the gays have for those like me. But that doesn't mean that I have to tolerate your presence or like being forced to treat you and you sickening ilk as "normal" and "acceptable alternative".

"...beaten, ...or killed..." I agree that this is wrong and I would defend you if I were to witness this. I think it was Voltaire who said "I will fight to the death against what you say, but I will defend to the death your right to say it." "Hounded, harassed"? You got it. Being queer is not your right. You are adversely effecting me. You have caused my health insurance rates to skyrocket; you have caused the quality of health care to plummet due to the fact that you are spreading disease. You have begun the disintegration of the moral fabric of this country by disrupting the family and burdening society with yet another special interest group that has only hedonistic self interest at heart.

Lets face it - your whole motive for being what you are is to attract attention to yourself and to saturate yourself in a selfcentered social order that cares nothing but for its own motives and "feels-good" self

interest.

I have nothing but pity and disgust for you and your kind. I view you and your kind as no different than any other sex-criminal such as child molesters, beasteality practitioners or rapists. You got a problem, and you wont admit it. Somehow, the incomprehensible winds of political correctness have blown your way. I hope that we can fix this situation and get you some help before its too late.

What does this have to do with Amatuer radio? Nothing, except unfortunately that I had hoped that there would be some organization such as the ARRL that would have the guts to stand up and say NO, we will not conform to PC and support homosexuality. I had hoped that there would be safe refuge from the sickening weirdness and hell-bent evil of homosexuality in the health and wholesomeness of the airwaves. But it is not to be. I suppose that things will have to decay further before the average man in the street says "Hey, I've had enough and this has got to stop!"

May God have pity on your troubled souls,

This message is reguarding my everlasting desire for N6UZS, Richard Clark's anus. We have many regular encounters. Since I have popped up, numberous others have popped up, such as WD4A, WD5000 & WD500 to name a few. This is to let you know, thanks to richard clark, homosexulality is alive & well in ham radio... on the 147.435 repeater in Los angeles, CA.

I urge all gay hams to contact richard clark if you are seeking anal pleasures.... Like me, enroute to 501 west brentwood in orange, ca at this time.

Those that dont know about the 147.435 repeater: It is mostly non-homosexual, except when richard clark & is wd40 buddies are out. The rest of the time it is jammed by KD6KEK in marina del rey, ca (frank richard). Other jammers who are closer to the machine, so they can do more damage, but who arent on the radio all day (usually) are KC6PQW ted sorensen the tird and this PUU guy. Thank god jeffery bregal KD6NBD is in jail (we hope). The 435 repeater in LA, CA certainly seems to attract the worst in ham radio.

To find out more about the anon service, send mail to help@anon.penet.fi.
Due to the double-blind, any mail replies to this message will be anonymized,
and an anonymous id will be allocated automatically. You have been warned.
Please report any problems, inappropriate use etc. to admin@anon.penet.fi.

I haven't beated, hounded or harrassed anyone. I just don't see the
need to make such a big deal about *forcing* normal people to accept
your behavior and give you special privileges for something you choose
to do with your sex life. I don't see hetero monagamous men coming out
of the closet proclaiming, "I take my SO up the old dirt road once in a
while and I'm proud of it! You better accept that and give me what I
want or else!"

>By the way, while I don't have definitive numbers, I hear that about 10% of

Source record: 258037

In Southern California a simple phone call to Southern Calif. Edison will usually result in the problem being taken care of in less than a week. That is unless you live in a City such as Anaheim which owns its own Utilities, and they wont recoginize they have a responsibility to keep the lines, insulators and transformers clean and not inhibit your listening pleasure... I have had occasion to confront them several times about the interference, when I got no results I contacted the PUC and informed them of the problem and then informed the City of Anaheim that I would be making my payments directly to the PUC until the matter was resolved, and that would be followed with a letter of complaint to the local FCC Field Office stating that they are causing interference to a duly licensed Amatuer Station and had taken no steps to correct the problem. It then took less than a week to get the offending street lights fixed and a transformer replaced.. On the other side of the coin we operate an HF station at work, and power is supplied by S. C. E. and when power line noise interferes, a simple phone call to them and a team is usually out in less than two days and the problem corrected in less than a week. I found this true in Washington State also.. So if you are not getting satisfaction from your local power company, send a letter to the PUC in your area, followed up by a letter to your local FCC field office. I think you will be suprised, the same approach works with the Phone companies here, a quick call and outline the problem and they will suppress right up to where the wires enter your house, dont give up and pretty soon you should be as noise free as they can make the lines.

Good luck - I have never received a QSL card from this guy.

Also note that IRCs are NG in South Africa/Namibia, so send CA$H.

1035. GB2RS News 23rd October 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-20 18:24:03 UTC
From: dave@llondel.demon.co.uk
Message-ID: <782702643snx@llondel.demon.co.uk>
Source record: 258246
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 23rd of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

Britain has experienced the best tropo conditions for years,

The RSGB has published its Annual Report,

and Reading has won NFD for the fourth year running.

During the week ending the 15th of October, a major tropo opening affected all bands from two metres up to the microwave bands. For much of the week the bands were open right across Europe. Signal levels were the strongest that many people can remember, and even UHF broadcast Television was seriously affected. The lift conditions covered much of the UK and extended into Central Europe and enabled many operators to experience really good propagation for the first time. At its peak many Novices and others were able to work into the Netherlands, Belgium and Germany with a watt or two.

The November edition of Radio Communication and the RSGB Annual Report was posted to all RSGB members at the beginning of last week. The Annual Report includes the notice of this years Annual Meeting as well as full details of the RSGB Council Election. Any member who has not received their Annual Report by the end of this week is asked to contact RSGB HQ for a replacement copy.

November's RadCom includes a full report on HF National Field Day. And the winner for the fourth year running is the Reading and District Amateur Radio Club. Restricted section winner was Gravesend Radio Society, and Echelford won the QRP section. A view of the Reading NFD station at sunset appears on the cover of this years RSGB Annual Report.

The 1995 RSGB President, Clive Trotman, GW4YKL, is to be installed at a reception and dinner during the evening of the 14th of January 1995 at Bridgend, Mid Glamorgan. Anyone requiring tickets should contact Fay Huxley at RSGB Headquarters.

The Jersey two metre repeater, GB3GJ, is now operational from a new site, after a long absence. The repeater is on channel R2. Further details and/or reports should go to the repeater keeper GJ0NSG, who is NOT QTHR, but can be reached via PO Box 704, Jersey JE4 8ZZ.

Two-metre repeater, GB3HS, operated by the East Yorkshire Repeater Group is now operational. The repeater is located north west of Hull and operates on channel R2. Further details and/or reports should go to the repeater keeper G7JZD via packet @ GB7HUL or to G6JFJ whose address is correct in the RSGB Call Book.

Another repeater operated by the East Yorkshire Repeater Group is GB3HA which is once more operational after a refurbishment. The repeater is located at north east of Hull and operates on channel RB6. Further details and/or reports should go to the repeater keeper G4YTV, whose address is correct in the RSGB Call Book.

The Orkneys two-metre repeater, GB3OC, operated by the Orkney and Caithness Repeater Group was returned to service last weekend after undergoing a complete overhaul. The repeater is located near Kirkwall and operates on channel R2. Further details and/or reports to be sent to the repeater keeper GM4TYU whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Macau, G3SXW and G3TXF will sign XX9TSX and XX9TXF respective from Taipa Island from now until Thursday the 27th of October. Activity will be on all bands, CW only. Check these frequencies:- 1.827, 3.507, 7.007, 10.107, 14.023, 18.073, 21.023 and 24.893MHz.

From St Martin, K1VSJ is active as PJ7/K1VSJ from now until Monday the 24th of October on all bands 40 to 10 metres.

And from Aruba, N4YKD will be active as either P40KD or P4/N4YKD from next Sunday the 30th, until Saturday the 5th of November.

Next the Rally News:

We know of no rallies for today, Sunday the 23rd, but the following Sunday, the 30th of October, there is the Hornsea Amateur Radio Club (East Yorkshire) Radio Rally. This is to be held at The Floral Hall, Hornsea, near Kingston upon Hull. Doors open at 11am, or from 10.30am for disabled visitors. The event features trade stands, a bring and buy stall and special interest groups which includes ATV. Refreshments will be available and talk- in will be on two metres, channel S22. Further details from Duncan, G3TLI on 0194 532588.

Now news of a Rally cancellation and change of contact details:

The Leeds and District Amateur Radio Society wishes to announce that due to circumstances beyond its control the Christmas Rally, scheduled for the 4th of December 1994 has had to be cancelled. Further details from G0IBU who is QTHR.

The Bishop Auckland Amateur Radio Club Radio Rally which is to be held on Sunday the 20th of November has a change of contact person, the new contact is Nick Dingle, G1XNI on 01388 488533.

Now for the HF contest news:

The CQ Worldwide DX SSB Contest takes place from 0001 on Saturday the 29th until 2359 on Sunday the 30th of October. This involves all bands 160 - 10 metres but excluding the WARC bands. See the October RadCom page 18 for further details.

The SWL Challenge takes place during the weekend of the CQ WW DX Contest. See October RadCom page 25 for full details.

The Worked All Britain LF CW Contest takes place next Sunday the 30th from 1400 to 1800 UTC on the 160, 80 and 40 metre bands. There are sections for Fixed, Portable, Mobile and SWL stations. Full details are available from Gordon, G4SKQ whose address is correct in the RSGB Call Book or via packet at GB7SYP.

Next some VHF contest news:

The next RSGB 432MHz Cumulative Contest is on Thursday, the 27th of October, from 2030 to 2300 local time. See the July edition of RadCom, page 82 for further details.

Another RSGB 10GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC next Sunday the 30th. See April's RadCom for details.

The second RSGB 1.3GHz and 2.3GHz Fixed and Listeners Contest takes place next Sunday the 30th from 1700 to 2100 local time. See September's RadCom for details.

The fifth and final event of the RSGB 144MHz CW Cumulative Contest will take place from 2030 to 2300 local time, on Monday the 31st of October. General rules will apply. Use 4422 summary sheet to show scores for each day, and the best three days will be totalled. Please send all logs plus a single 427 cover sheet for entry. Rule 10 applies. There are two sections; the first for single operator or portable entries, and the other for listeners. The Adjudicator is David Johnson, G4DHF, 65 West Street, Bourne, Lincolnshire PE10 9PA.

And now the solar factual data:

The period from the 10th to the 16th of October saw a slight and very welcome rise in both the sunspot indices and solar flux. The geomagnetic field declined from unsettled to quiet levels. This resulted in a considerable improvement in the higher HF bands. The sunspot indices increased every day and peaked up to 98 on the 15th, the highest level since last July, giving a mean of 84 for the period. The solar flux increased slightly from 87 units on the 9th up to 93 units by the 15th, giving an average of 90 units for the period. On the 12th, two very small class B type flares took place which helped both the solar and x-ray flux levels to increase. The electron fluence has declined by two orders of magnitude and is now about normal for this part of the cycle, the recent very high levels have seriously affected many satellites as well as the higher HF bands. The 90 day average of solar flux on the 16th was 79 units.

The geomagnetic field started the period at active levels, with the Ap index being up to 22 units on the 11th before declining to quiet levels of only 3 units by the 16th. The period averaged 13.7 units. The state has been nil nothing to report. The x-ray flux has remained high throughout the period, reaching B1.5 on the 14th, and averaging B1.2 for the period. This has resulted in considerable improvement on the higher HF bands with 21 MHz being open to North America from most of Europe, and 28 MHz being open to Africa most afternoons. The aa indices for the period from the 4th to the 10th of October, as supplied by the British Geological Survey declined from sub storm levels on the 5th of 58.5 nanoTeslas to just unsettled by the 9th of 18.7 nanoTeslas. The average for the period was 42.8 nanoTeslas, about K4.

I'll repeat the figures. Spots - 84; Flux - 90; Ap index - 13.7; X-ray flux - B1.2.

Now the ionospheric data for Central France.

With the seasonal changes now having an effect, the F2 daytime frequencies at Poitiers, as reported by Meudon, increased almost every day. The average was 7.0MHz, though the 14th was up to 8.3 MHz, the highest level since last July. The darkness hour lows averaged 2.5 MHz but were down to 1.9 MHz on the 12th. The highs are now taking place between 1200 and 1500 hours, with the darkness hour lows around 0500 hours.

I'll repeat the figures. Highs - 7.0MHz; Lows - 2.5MHz.

And lastly the solar forecast.

This week the quiet side of the sun should be looking our way. Solar flux levels are expected be in the mid 70s. The geomagnetic field is expected to be active due to the passage of a coronal hole today, then declining to just unsettled or quiet levels for the rest of the week. Ionospheric MUFs during daylight in the south are expected to reach 25MHz, with darkness hour MUFs being about 8 MHz. Some east/west openings could occur during the afternoon periods on the higher bands.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Juliet and G7 Tango Uniform series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Lima series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

The other thing people have tried is to use a moving reflector.
Doppler systems depend on getting a lock on the frequency difference
between the forward and reflected beam. (you can't directly
count the waves in optical or near optical systems (at least
not recently)). So if you add a strong more or less random
component to the reflected beam you make the lock harder to get.
One of the engineers involved in inverse scattering was having
his students design such reflectors - because the wave length
is small they don't have to be much bigger than say fuzz dice ;-).

1038. Yaesu 757 + GXII ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-20 19:07:35 UTC
From: randster@bga.com
Message-ID: <386f5n$iq3@edwin.bga.com>
Source record: 258231
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

After looking at a 757GXII that was for sale, and looking at back issues of QST for review articles, can anyone tell me why the 757 was re-released as the GXII? Was it to fix some kind of bug? Its production run didn't last very long, did it?

It looks and acts like a great radio to have, as far as used equipment goes, but are there problems to be encountered down-the-road?

My coverage of QST is limited, only back to '86, and I wasn't able to find an article on it in any of the end-of-year directories; the adverts don't show many GXII's. Wasn't able to find a review of the 757, either.

Is this a good used radio to buy? Opinions/comments welcomed! Tnx. 73.

1039. Re: Yaesu 5200 Mods- Still Looking

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-20 19:11:48 UTC
From: Mike@g4kfk.demon.co.uk
Message-ID: <782680308snz@g4kfk.demon.co.uk>
Source record: 258248

Hi Bill,

> I posted this week looking for any mods for the Yaesu 5200 but have not
> heard from anyone... Is there a FAQ? Can someone send me a file?

What? Again? Well I did reply ... but seems you didn't get it...

The following article was extracted from FT5200.ARJ, available from The CQ Centre BBS (details below). Usual caveats apply:

**QUOTE

Here are a couple of modifications/options for the New Yaesu FT-5200 Dual Band 2M/440 Tranceiver.

To expand the RF coverage so you can take advantage of MARS/CAP or service uses follow the steps provided.

****** CAUTION * * Follow proper ESD procedures to prevent Electro-Static Discharge damage to semi-conductor components! *******

a. Remove Power.
b. Release and remove the front control head from the radio.
c. Remove the six screws from the top cove and the six screws from the bottom cover.
d. Carefully remove the top and bottom covers (careful not to drop out the speaker).
e. Remove the two screws and front control head mounting plate from the radio.
f. Locate solder pads 1 - 7 (Standard jumpered pads are 2 and 7 only)
g. sing a low wattage(30-40W) soldering iron and good electronic grade rosin core solder, Solder jump pads 1, 3, and 6. (Now pads 1, 2, 3, 6 and 7 are jumpered)
h. Reinstall the front control panel mounting plate.
i. Reassemble the radio.
j. Connect Power.
k. Press and HOLD [D/MR], [F/W] & [REV] keys and turn on the radio. (The display will show 000.000 and 300.000)
l. Set the VHF transmit and receive limits as follows:

Enter 118.00 MHz and press [D/MR] (VHF Rx Low)
Enter 174.00 MHz and press [D/MR] (VHF Rx High)
Enter 140.00 MHz and Press [D/MR] (VHF Tx Low)
Enter 174.00 MHz and press [D/MR] (VHF Tx High)

m. Set the UHF transmit and receive limits as follows:

Enter 420.00 MHz and press [D/MR] (UHF Rx Low)
Enter 475.00 MHz and press [D/MR] (UHF Rx High)
Enter 420.00 MHz and Press [D/MR] (UHF Tx Low)
Enter 475.00 MHz and press [D/MR] (UHF Tx High)

n. Press [Function] then [REP] and select 5 MHz for UHF band
Repeater offset.
o. Press [Function] then [REP] and select 600 KHz for VHF band
Repeater offset.

That completes the modification for extended RF coverage of the FT-5200.
NOTICE! A license from the applicable service is required to operate outside
the normal ham bands (i.e. MARS or CAP).

--- Other items of interest for users of the FT-5200 ---

- Overriding the automatic display dimmer...

Press and HOLD [MHz] and turn on the radio, then use the channel knob
to select the desired brightness.

- For expanded Receive in the VHF band (no change in transmit coverage)

Press and HOLD [DVS] & [MHz] keys and turn on the radio.

I have made the previous modification to a unit and have not had any problems
what so ever. I assume NO responsibility or liability for any damage or
violation resulting from anyone else making these modifications or operating
in a portion of a band for which the user is not properly licensed.

--

That may have been most of the problem. Some folks are likely
to be turned off when they answer an 18-wpm CQ only to be asked
to QRS to 10-13. Still, would have been nice if they had told you
that rather than just terminating.

>
>You know, I *swore* that I wouldn't like CW, that it was anachronistic
>and technically obsolete. All that notwithstanding, I think it's going

>desire to communicate--all advice is appreciated...
>

Congrats! The same thing happened to me - dappled in CW
to start since it was all I had available. Lost all interest
in voice/digital pretty quick. :) Never had so much fun
before. Working across North America on 5 watts and a low
inverted-vee is great! Still want that beam though... :)

QRP is alot of fun, but it does take some thought towards
strategy. A good one (for starting out) is to answer the
calls of the loudest signals on the band. Calling CQ isn't
the best strategy to start but don't be afraid to do it,
particularly if the band is good.

Which leads to the key point - know your propagation
conditions. Monitor WWV (5000, 10000, 15000 KHz) to
check the bands. 14100 has a network of beacons, I believe.
Also, tune in around the QRP calling frequencies.

Try getting on the qrp mailing list. I believe you send
email to listserv@netcom.com and put "subscribe qrp-l"
in the message body.

Feel free to email if you want more info.

Precisely - so why do LARC feel they have the right (or the need) to bring
our hobby into disrepute in order that a few of their members can come out
of their sordid closets. It is LARC that is off topic!

>show many GXII's. Wasn't able to find a review of the 757, either.

OK, here we go. After having one of each to sell, here are the differences:

The '757 came out in 1984. Wildly popular, with very small size, general coverage receiver, AM/FM/SSB/CW and a 600-Hz filter standard, AND an iambic keyer standard! It could be controlled via computer and an interface box.

There were some complaints about it, though. The tuning rate was slow, and there was no "FAST" mode. It had IF shift and IF width, plus an infinite clarifier (RIT) and a Noise Blanker. But it was missing a notch filter. The mode didn't get stored in the memory as it was set via a mechanical switch.

The GX/II came about around 1989. Same "guts" as the 757GX, else they would have renamed it. There was now:

1) A "FAST" button, to achieve a faster tuning rate
2) A "MODE" button which cycled the radio through a series of LED's indicating the mode. The mode was now stored in memory along with the frequency.
3) A Notch Filter. Wow.

The scanning feature was somehow changed, although I don't remember the specifics. Well, that's about it. The case color was changed slightly, and the fluorescent display, once a purplish-blue (very pretty and colorful), was replaced with a gray-blue display (quite drab in comparison).

The radios have the same receiver and transmitter circuitry, save for your standard running changes. The interfaces and bells & whistles changed.

1047. 22 OCT - Durham NC - NRE Commercial Radio Op Exam

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-20 20:40:19 UTC
From: ab4el@cybernetics.net
Message-ID: <386kjj$gsa@jabba.cybernetics.net>
Source record: 258243

Commercial Radio Operator License Examinations:

Durham, NC - - 22 October 94 - - 9:30 a.m.
SW Branch of Durham Public Library: 3605 Shannon Road

Steve Modena AB4EL (919) 787-7618
or Terry Murphy AB4VJ (919) 494-2088

How To Get There:

Talk-in: we will listen for this Durham repeater: 144.85/145.45

These instructions work if you approach South Square Mall
via 15-501 BYPASS.

You are in the vicinity of South Square when you can see the
lone skyscraper with the "needle" tower.

Whether you are coming from I-40, headed north on 15-501 BYPASS...
or coming from I-85, headed south on 15-501 BYPASS, there will be
a sign indicating "Keep Left for 15-501 BUSINESS -- South Square."

Exiting from either direction of 15-501 BYPASS leads to the same spot.

Passing under an overpass, there is a traffic light at a cross road
named "Westgate"...and the Lone Star restaurant is ahead at 2 o'clock.

Go straight ahead.

Midway to the next traffic light, there is a sign: "Next right to
Auto Drive." At the light, there is a big Circuit City store is on
the left...and the only turn possible is to the right, onto Shannon Road.

Turn right at this light.

The first traffic light on Shannon Rd. is at Auto Drive and
you are in the midst of South Square mall: continue straight ahead.

The next traffic light on Shannon Rd. is the 3900 block of
University Drive: go straight ahead.

After passing the Shannon Manor apartment complex, the next intersection
has a stop sign and is called "MLK Jr.": go straight ahead.

Heading up a small hill and reaching the crest just before the curve,
you are looking straight at the Durham Library--Southwest Branch...
a brick building set on the left side of and below the level of the road.

The exam site address is 3605 Shannon Road.

The exam room is visible through a very large window to the right of
the building entrance. Commercial Radio Operator License Examinations

Durham, NC - - 22 October 94 - - 9:30 a.m.
SW Branch of Durham Public Library: 3605 Shannon Road

Walk-ins are welcome, but seating is limited.
For more info or to reserve an exam seat, contact:
Steve Modena (919) 787-7618
or Terry Murphy (919) 494-2088

Licenses Attainable:

Marine Radio Operator Permit - - Element 1
General Radiotelephone Operator - - Elements 1 & 3
GMDSS Radio Maintainer - - Elements 1, 3 & 9
GMDSS Radio Operator - - Elements 1 & 7
Ship Radar Endorsement - - Element 8
3rd Class Radiotelegraph Operator's Certificate--Elements 1, 5, T1 & T2
2nd Class Radiotelegraph Operator's Certificate--Elements 1, 5, 6, T1 & T2
1st Class Radiotelegraph Operator's Certificate--Elements 1, 5, 6, T3 & T4

Who is offering it: W5YI-affiliated NATIONAL RADIO EXAMINERS in N.C.

What will be offered: Examinations on elements 1, 3, 5, 6, 7, 8, 9.
Contact us before hand about Code Elements--credit for elements T1 & T2
is granted to Amateur Extra Class License holders who passed their
20 WPM test.

What to bring:
Two forms of positive personal ID
Your extended ZIP code: xxxxx-XXXX
CASH for the examination fee
Personal check or credit card for FCC fees (if any)
Hand calculator (optional)
Code credit via Extra Class License requires showing original license
and a copy of it
Radiotelegraph license application requires two (2) photos--call us
about requirements
Good preparation and a relaxed mind

WARNING: Anything that even resembles cheating or an attempt to cheat
will be reported *directly* to the FCC, as per regulations

How We Operate:

1. Any or all of the currently offered written elements available may
be taken.

2. Elements may be taken in any order

3. The amount of time allowed for the examination session will be
reasonable, but not unlimited.

4. We reserve the unequivocal right to limit seating:
first come, first served!

5. If you fail an element, there will no opportunity to retry that
element during the same session.

6. Each element passed sucessfully will be recorded on a
Proof-of-Passing Certificate.

7. If you qualify for a license, you may prepare an FCC Form 756,
or defer until a later time.

8. We will file the license application for you, or you may opt to
file for yourself.

9. We recognise Proof-of-Passing Certificates from other W5YI groups
and from other authorized testing organizations. However, we
will file for a license on your behalf only if at least one of
your needed PPCs was obtained during the current examination
session.

10. Fees charged for the examinations themselves, payable in cash,
follow this NRE rule:

"At this time, NRE requires a fixed $35 fee from each candidate
for the administration of any and all examination elements
required for each commercial license per sitting. If any
elements are failed, no license which required the failed
element would be issued and the applicant would have to
schedule another exam session and pay another fee to obtain
the desired license."

11. Certain licenses are subject to a FCC Regulatory Fee:

Marine Radio Operator Permit: $35.00 (5 year term)
General Radio Operator License: no fee (lifetime)
GMDSS Operator (alone): $35.00 (5 year term)
GMDSS Mainainer (alone): $35.00 (5 year term)
GMDSS Operator/Maintainer (issued as combo): $35.00 (5 year term)
Ship Radar Endorsement: no fee (5 year term)
3rd Class Radiotelegraph: $35.00 (5 year term)
2nd Class Radiotelegraph: $35.00 (5 year term)
1st Class Radiotelegraph: $35.00 (5 year term)

12. There are two options for paying any required FCC Regulatory Fee:
a. Peronal or bank check or money order, payable to the
"Federal Communications Commission"
b. Completion of a FCC Remittance Advice-FCC Form 159 for
payment by credit card.

13. We are absolutely obligated to be certain that you are who you say
you are--and not a "ringer" standing in for you. Make sure that
the identification that you present will pass muster--otherwise
you will not be allowed to sit for an examination. If you have
any doubt about what will be a suitable combination of ID documents,

feel free to telephone us and discuss it.

* * Latest Status on Radiotelegraph Code Examination * *

As per telephone conversation with NRE-W5YI on Friday 07 October 1994, the software for generating the required format and content style is not ready. The FCC is yet to issue the guidelines...the messages (presumably the clear text exams) are to be similar to messages encountered in the service. If the timeliness of taking a code examination is of critical interest to you, call and alert us of your need so that we can contact you about any change in this situation.

I have rec'd a few e-mails from people who have tried to use the e-mail
call server mentioned above. Seems there must be something wrong with it
as it always(?) returns "not found". Sorry I don't have any more info on
the service.

>now.

Well, at least you're honest about your attitude, but I'll be surprised if you ever learn the code until you can take it as less of a personal affront. What I would suggest is that you listen to code (ARRL broadcasts or PC-generated) and just try to let it flow over you, writing letters as you hear them but *not* thinking about them, and *not* going back to correct mistakes or add letters ("A-hah! That letter two words ago was an F, not an L!"). Just pick off letters as lazy as can be, like you just couldn't be bothered to think about it if it doesn't come immediately and automatically. I think this will help you to develop an automatic response that prevents too much thinking, which I believe is the biggest obstacle to managing the code. Pounding your head into the keyboard is discouraged, as is telling everyone who will listen how stupid CW is and how much you hate it.

Surely, after all that work, you'll try at least *one* CW QSO, won't you? (See the post a few days ago by the guy who was astonished at how much fun he was having with his new-found CW skills.)

1051. Re: opinion:Icom IC-W21A

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-20 21:20:51 UTC
From: edmitch@microsoft.com
Message-ID: <Cxzpyt.IwK@microsoft.com>
Source record: 258264

Regarding the IC W21A versus other radios. A year ago I bought the W2A, the logical successor to ICOM's IC24AT dual band handheld. I am pleased with the W2A.

When shopping I considered the W21A. The "whisper" mode feature that enables you to use the radio more like a phone (held to your ear, with the microphone in the battery pack) looked very handy to me. In checking around, the only major complaint I heard was that the maximum audio level output was too low because of the very small speaker that was used. Some didn't like the microphone built-in to the battery packs since batteries do where out after around 125-150 deep discharge/recharge cycles and the mic adds to the expense of the battery replacement. But overall, the reviews I read were generally positive of the W21.

I ended up buying the W2A because my wife has a IC24AT it helped having identical battery packs that we can swap. FYI the external mic connector on the 24AT and the W2A are NOT the same so you can't use the same external mics.

No, this is not legal. It is clearly spelled out in the Part 97 rule book.

ZCZC AE61
QST de W1AW
DX Bulletin 63 ARLD063
From ARRL Headquarters
Newington CT October 20, 1994
To all radio amateurs

SB DX ARL ARLD063
ARLD063 DX news

The items in this week's bulletin are courtesy of Marilyn, N6VAW, Jeff, KU8E, Tedd, KB8NW, the Ohio/Penn DX Bulletin, Bob, W5KNE, QRZ DX, Chod VP2ML, The DX Bulletin and the Contest Corral column from the pages of QST magazine. Thanks.

THE GAMBIA. The Whitton Amateur Radio Group of London plans a DXpedition to C5-land. Hopes are to operate on 13 amateur bands from 160 meters to 2.3 GHz. The Gambia is very rare on satellite and this may be the first Mode S operation from this DXCC country. Dates will be between October 23 and November 10. During the CQWW DX SSB weekend, listen for C56DX during the CQWW DX Contest. Other times they will sign C56/G0MRF. QSL via G0MRF.

BELAU/YAPP. OKDXA members Jim, WV5S, and Coy, N5OK, will sign KC6SS and KC6OK respectively from October 25 to November 2. From there it is on to Yapp in the Eastern Caroline Islands November 2 to 7, signing V63SH and V63OH. QSL via their home calls.

MADEIRA ISLANDS. Frank, DL8KWS, was signing DL8KWS/CT3 but now has the call CR9WAG. Another German op is active as DL3KUD/CT3. Both stations are very busy on CW and plan to be on the air through October 27. QSL via their home calls.

LUXEMBOURG. A group of Dutch operators will sign LX/PA3DKC on HF and LX/PA3CDI on 6 meters from October 26 to 30.

SEYCHELLES. Andres, EA4EGZ, will operate from Mahe Island October 21 to 28, with activity 40 through 10 meter CW.

PITCAIRN ISLAND. Listen for VR6MW and other VR6 stations around 0600z with a net on 7083 kHz SSB.

CAMBODIA. Europeans were working XU1MF on 18138 at 1515z on October 11. QSL via JA1JTU.

The following are planned operations for the upcoming CQWW DX SSB Contest.

NAMIBIA. Listen for N0AFW, WA0PUJ, N9NS, AH9B, NH6UT and V51GB from October 25 to November 6 as V51T. The Americans will sign V51/ their home calls before and after the contest period. QSL V51T and V51/ stations via WA2FIJ.

ANTIGUA. Members of the Frankford Radio Club, FRC, will be active as Team Antigua signing V26B. Non-contest calls will be V26A, V26B and V26E. QSL V26A via WB3DNA, V26B via WT3Q, and V26E via AB2E.

SAINT LUCIA. Members of the Southwest Ohio DX Association will be on as J6DX. Before and after the contest, from October 22 to November 5, members will be on all bands using a variety of call signs.

GUYANA. Marko, OH6DO, aka AB6NJ and VR2NJ, will be signing 8R1K. He is planning a serious Single Op/All Band effort. QSL via OH6DO CBA only.

BURUNDI. Paul, 9Q5EXV, and a few other 9Q5 ops plan to be active during the contest as 9U4U.

GUANTANAMO BAY. Jeff, WI2T, will man a Single Op effort, work schedule permitting, signing KG4JO. QSL via WI2T.

ANTIGUA. Ratko, YU1NR, will be active for 20 days starting October 26. He will participate in the contest as V28NR. QSL via YU1NR, Novakovic Ratko, PO Box 145, YU-34000 Kragujevac, Serbia.

BELGIUM. OT4T will be a multi/single effort from the QTH of ON4UN, famed author of Low Band DXing. Expect some big signals on the low bands.

REVILLAGIGEDO ISLANDS. XF4M will be an international team effort from Socorro Island. They will be on all bands, most modes, and as a bonus will operate through RS12. QSL via JH1AJT.

SAINT MARTIN. FJ5AB will be on as a multi-multi effort. Before and after the contest, operators N2HIG, K2MME, AA2SZ, N0IMH and F6GOX will operate signing FJ5/ their home calls.

CANADA, ZONE 2. VE2NRK by WJ2O, and VE2TJA by WB2K, will operate single op, all band, high power in the contest. QSL via their home call signs.

ASCENSION. Jim, N6TJ, plans single band work on 20 meters as ZD8Z. QSL via VE3HO.

NEVIS ISLAND. V47NS by W9NSZ will also be a 20 meter single band entry.

CURACAO. Seppo, OH1VR, will be shooting for a record on 40 meters as PJ9U.

SINT MAARTEN. PJ8Z will be by KI4HN, KA9FOX and N0BSH. QSL via KA9FOX.

SOUTH COOK ISLANDS. Marilyn, N6VAW, and Rich, WB6UDS, will be signing ZK1VAW and ZK1UDS respectively, October 24 to November 5 from Raratonga.

FRENCH POLYNESIA. Listen for FO/DJ1RL and FO/DL6NA between October 22 and 28.

THIS WEEKEND ON THE RADIO. The Texas QSO Party, sponsored by the Texas DX Society, runs from 1400z October 22 to 2200z October 23. In this phone and CW event, Texas stations will send their name and county. Other stateside stations exchange name and state, VE/DX stations exchange name only. Full details appear on page 126 of October QST.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 OCTOBER AND FORECAST FOR 21 OCTOBER - 23 OCTOBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 90/34

GOES satellite data for 19 Oct
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 3.1E+04
Daily Electron Fluence >2 MeV: 9.4E+06 (normal)
X-ray background: B1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Oct 22 Oct 23 Oct
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Oct: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 19 Oct
Learmonth 7 3221 2221
Fredericksburg 8 7
Planetary 8 5

Observed Kp for 19 Oct: 2000 2233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
21 Oct 8 Quiet to unsettled
22 Oct 16 Unsettled to active
23 Oct 25 Active
COMMENT: A shock is expected from yesterdays M3 flare at
approximately 1700UT on the 22nd. Active conditions are then
expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Oct normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Oct normal normal fair
22 Oct normal fair poor
23 Oct fair poor poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
20 Oct 32 near predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
21 Oct 30 Near predicted monthly values
22 Oct 25 Near predicted monthly values
23 Oct 10 10 to 20% below predicted monthly values
COMMENT: Degraded HF comms on 23rd due to expected flare induced
geomagnetic activity.

>could anyone give me the any information on how to contact them.
>
"Skyrider Jr." was only used on model S-41. This was essentially an
Ecophone EC-1A, built immediately after WWII, and replaced by the S-38.
It is an AC-DC set.

Hallicrafters vanished about fifteen years ago.

This seems to be an incredibly dangerous choice of a frequency.
If a windshear is detected I believe a warning is automatically
transmitted to nearby aircraft, correct? Is it possible
for an HT to confuse the radar and trigger the system?

Just out of curiosity, what is located in the 824-851 MHz range? I notice that most scanners do not cover this range. My guess is TV, but I am willing to be proved wrong. Thanks in advance...

>using the SuperMorse program (EXCELLENT!) to learn, and am wondering
>if the code tapes may have been a better route, and this is a side-
>effect of my choice in learning.

Steven -- I learned with tapes, and used SuperMorse to practice after I had the basics down pretty pat, but you can certainly do it the opposite way -- whatever works for you!

One nice thing about tapes is you can use them where you can't use SuperMorse, such as in the car on a commute.

One thing that worked for me, and that I know has worked for some other people is sounding out the code for EVERYTHING you see -- out loud if you're by yourself or with someone who understands such lunacy, in your head if you're where someone might think you've totally flipped out. This is really practicing sending more than receiving, so it's no substitute for the tapes, but it gets you "thinking in CW" for as many hours per day as possible, which can really speed the process up.

I did this with street signs, names of objects, you name it. License plates are especially good if you're in a state where they use combinations of several letters and numbers rather than mostly numbers, since they tend to use the rare letters that aren't used that much. And I really did it with EVERYTHING when I wasn't in a situation where it was imperative that I concentrate on something else. I'd see a tree: "Dah Di-dah-dit Dit Dit;" a Chevy: "Dah-di-dah-dit Di-di-di-dit Dit Di-di-di-dah Dah-di-dah-dah."

It may not work for everybody, but it did for me.

The other big piece of advice is to try to join class where you're exchanging feedback with other people. Everybody hits plateaus where they don't feel they're making any progress. I tried to learn CW a couple of times several years before I finally did it, and thought I "couldn't learn CW" when I hit a plateau where it felt that I wasn't making progress and might even be regressing.
What I didn't know until I took a class is that this happens to everyone, and the periods that you learn the fastest seem to follow immediately upon these periods where you're not picking up anything. It's almost like when a computer

says "working" or some such -- like your brain CAN'T learn any more until it process what you've already learned. Some people say to stop when you hit one of these periods so you don't become discouraged. My personal reaction is that doing that makes it too easy to quit altogether -- just know that what's happening is entirely normal.

Good luck and congrats on the decision to upgrade.

should
>not be able to reach from North Carolina to Barbados, Arkansas, or Mexico. Is there
someone
>out there that can do something about this for me?

Carl -- It's possible he is only operating with legal power, but I seriously doubt it. Technically, talking to Barbados, Arkansas and Mexico is illegal on CB, but those rules are rarely enforced (and, IMHO, shouldn't be if the operator is otherwise legal), and it is certainly POSSIBLE to talk those distances using 5 watts or less. It's also POSSIBLE to cause interference with properly adjusted equipment operating at legal CB power, but a lot of CBers cause problems by not paying much attention to their equipment except for seeing that it operates at the maximum possible (not maximum legal) power.

Look in the phone book to see whether there is a listing for the Federal Communications Commission. If there is, call and explain the problem. They don't have the staff to jump on this type of situation as rapidly as one that is affecting public safety, for example, but they DO enforce the rules when they are able to do so.

It's also possible, however, that he is operating at legal power and is only transmitting on the proper frequencies. A lot of electronic equipment these days is absolute junk as far as shielding from radio frequency interference. My next-door neighbor pointed out to me that when I operated on the 7 MHz band I was getting into one of his two stereo speakers even when it was off. I didn't think it was possible, but darned if he wasn't right! I checked my equipment, and it was all operating correctly, so the problem was obviously in his equipment. Fortunately, that's the only band that was a problem, I operate on it relatively infrequently, and we're good friends, so there's not a -- but it does demonstrate that these problems can occur even when the transmitter is operating properly and legally.

>
>What's our average age anyway? Older people usually DO have a higher
>cancer rate compared to the average population.

I agree. In fact, given the number of guys I know in their 80's who are still active hams, it seems to me that an argument could be made that RF exposure PREVENTS cancer and other diseases of aging -- it's not a scientific sample, but I suspect it's as "scientific" as anything that supposedly "proves" the opposite proposition. I mean, how many males make it significantly past 80 in the general population?

>I've also noticed a sedentary lifestyle for the majority of the amateur
>population around here. Much easier to "sit in the shack" (say that three
>times real fast ;-) doing DX year after year rather than keeping the old

>coffee and donuts! ;-) There is field day of course. That once-a-year
>exercise. While I've only been invloved for about 2-years now, I've
>experienced the decrease in physical activity myself.

Not only a sedentary lifestyle -- excess caloric intake is a PROVEN cause of cancer in virtually every animal species studied, and as I look around my radio club (including in the mirror) it seems to me that could be a confounding variable in any study of cancer in hams.

I can "prove" that, at least for people in Maryland, oyster consumption causes the skin to lighten, and crab consumption causes it to darken. (Oysters are traditionally eaten in months beginning with "R" and crabs are largely eaten in the non-oyster months.) There's certainly no question that there's an extremely high correlation between the consumption of these two types of seafood and skin darkness, but I doubt that many people would think that there was a causal relationship! Yet there's about as much evidence of one as there is that the terrifying technological innovation of the moment causes cancer.

There should be some way to implant on the brain of every reporter who does one of these stories the statement: "CORRELATION DOES NOT PROVE CAUSATION."

Michael P. Deignan <md@pstc3.pstc.brown.edu> writes:

>Therefore, I think its incumbent upon the ARRL to split the "Silent
>Keys" column into two sections: a "Silent Keys", for real hams that
>know what a key really is, and a "Silent PTTs" section, for the 2 meter
>good-buddy box users.

Do you include among the "real hams" the 2 guys with calls indicating they have been around since before anybody even THOUGHT of "no-code technicians" who deliberately tuned up on top of me and then started their QSO on their "private" frequency when I had a good run going on 75 meters during the recent Pa. QSO Although I was only using 100 watts, I know they heard me, since they were commenting about "Is there a contest going on? Yeah, there seems to be a lot of QRM -- I had to turn my amp. all the way up to get rid of it" -- or words to that effect. I also know that I put a pretty good signal into their area with my 100 watts.

The irony is that if they had politely asked me to move, I would have done it since while I like participating in contests, I'm far from serious about it and will always take time out for a ragchew, getting out of the way of a net, you name it. I'm not criticizing people who don't, but it never even occurred to these idiots to even ask -- much less to look for another frequency (and there were others around).

There are lids among the no-code techs., but they sure don't have a monopoly on them. In fact, given what I hear on the air and the numbers of people with the various license classes, I wonder if there may not be more lids per capita among Extras than any other class. I doubt it, but it wouldn't shock me if it were true.

You can list two nonprofit publications about radios
for FREE in UNCAT, the catalog of uncataloged titles.

UNCAT has titles from businesses, nonprofit groups, trade
associations, museums and self-published authors with
research reports, pamphlets, brochures, catalogs, newsletters,
booklets, books, videocassettes and audio cassettes.

You can explore UNCAT at this case-sensitive URL:

http://www.sapphire.com/UNCAT/

If you have any difficulty connecting, an alternate URL is:

http://www.digimark.net/UNCAT/

Check out the Hello Direct, Inc. catalog in the Products
subject area to see the full scope of UNCAT.

If you are new to the Web, try typing:

Lynx http://www.sapphire.com/UNCAT/

or

Lynx http://www.digimark.net/UNCAT/

If you want detailed information about UNCAT, or have only
e-mail access to the Internet, send e-mail to:

info-UNCAT@Sapphire.com

1066. UPDATE: The Amateur Radio BBS

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 06:38:23 UTC
From: howardl@wb3ffv.wb3ffv.ampr.org
Message-ID: <Cy0Fs0.12J@wb3ffv.wb3ffv.ampr.org>
Source record: 258032

```
+---------------------------------------------------------------------------+
HOW TO ACCESS THE WB3FFV AMATEUR RADIO TELEPHONE BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to Internet E-Mail. Below is the information that is
needed in order to access the BBS via Telephone, Telnet, or FTP. Please
pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

410-661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

410-661-2598 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

410-661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - wb3ffv1.sed.csc.com (20.2.1.80)

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.30b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2
and features more than 3 Gigabytes of on-line file storage.
Most transfer protocols are available!!

I attempt to keep the latest and greatest HAM software on-line, and encourage
all to upload anything new that they come up with, as it is of benefit to all.
Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
```

G8BPQ PC-Node (Version 4.06)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my files listing into your uucppublic directory.

If you want to access the BBS via Telnet all you have to do is TELNET to wb3ffv1.sed.csc.com, and login is 'bbs' with no password required. To use anonymous FTP just ftp to wb3ffv1.sed.csc.com and login as 'anonymous'. This system is currently attached to the Internet via a dialup SLIP link, and should generally be available 24hrs, but at times the modem will drop the line. Also since this isn't the fastest link, I will be limiting the maximum number of anonymous sessions for the moment.

If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck...

Internet : howardl@wb3ffv.ampr.org | Howard D. Leadmon
UUCP : wb3ffv!howardl | Advanced Business Solutions
PHONE : (410)-661-0447 | 4107 Martin Avenue
FAX : (410)-661-0644 | Baltimore, MD 21236
PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

1073. Japan International DX PH contest

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 12:22:40 UTC
From: je1cka@dumpty.nal.go.JP
Message-ID: <9410211222.AA17972@dumpty.nal.go.jp>
Source record: 258287

Hi all

I expect to have many not-so-serious contesters for the JIDX PH
contests.
There are plenty of awards and plaques. Just enjoy the qsos with
JAs and send the log/summary via e-mail. Is it convenient for you?

Tack JE1CKA/KH0AM
====
1994 JAPAN INTERNATIONAL DX "PHONE" CONTEST

OBJECTIVE: For amateurs around the world to contact JA
stations in as many JA prefectures as possible.

1. CONTEST PERIOD:
Starts: Nov. 11 '94(Fraiday) 2300 UTC
Ends : Nov. 13 '94(Sunday) 2300 UTC
Operating period is maximum 30 hours of the total 48, except for JAs,
who can operate the full 48 hours. Off period must be longer than
60minutes length and clearly indicated in the summary sheet.

2. BANDS: 3.8, 7, 14, 21 & 28MHz, except for the WARC bands.

3. ENTRY CLASSIFICATIONS:
Choose only one!
3-1.Single Operator Multi Band
3-2.Single Operator Single Band
3-3.Multi Operator Single Transmiter

All categories; only one transmitted signal allowed at any one time.
Single operator can change bands at any time.
Multi Operator; They must remain the same band at least 10minutes
when they make the contact on that band.
Single operator, single band contestants may only submit an entry
for a single band, though submission of check logs for operation
on other bands is encouraged.

4. CONTEST EXCHANGE:
JAs : RS report plus Prefecture number 01 to 50.
Others: RS report plus three-digit serial number starting
from 001. Keep one serial number count for all bands.

5. POINTS:
Only contacts between JA and DX are worth contest points.
(DX-DX or JA-JA contacts are no point and no multi)
3.8MHz ..... 2 points
7MHz, 14MHz and 21MHz..... 1 point

28MHz..... 2 Points
The same station may be worked only once per band.
No crossmode, crossband nor repeater contacts are allowed.

6. MULTIPLIER:
JAs : The number of diffrent DXCC country (except JD1) worked on
each band.
Others : The number of different Japanese Prefecture plus Ogasawara
Is.(JD1), Minami-Torishima Is.(JD1) and Okino-Torishima Is.
worked on each band.
Maximum of 50 per band.

7. SCORING:
The final score is the result of the
(Total QSO points) multiplied by (Total multiplier).
Ex. 100 QSO points x 59 multi = 5,900

8. LOG INSTRUCTIONS:
8-1. All times must be in GMT.
8-2. All sent and received exchanges are to be logged.
8-3. Indicate the new multiplier(prefecture) only the FIRST TIME
it is worked on each band.
8-4. Duplicate contacts on same band must be clearly shown and
marked as 0 QSO point.
8-5. Electronic Log:
Disk log; IBM, MS-DOS compatible disks are accepted only with
the printed summary sheet. The LOG format must meets the
"ARRL Suggested Standard File Format For Submission of
Contest Log Data".
Email Log; Request to send the instructions to the email address
indicated below with the word "#get jidx-log" in the body of
the message.
jidx-info@dumpty.nal.go.jp (For information request only)
Then you'll receive the instructions by email.
8-6. Use a separate sheet for each band and keep one serial number
count for all bands..
8-7. Each entry must be accompanied by a summary sheet showing all
scoring information, class of entries, name and address in BLOCK
LETTERS, and a signed declaration that all contest rules and
regulations for amateur radio in the country of operation have
been observed.
8-8. The 18 hour non-operating periods must be clearly shown in
the summary sheet.
8-9. All entrants are required to submit dupe-check sheets (an
alphabetical list of calls worked) for each band on which 200
or more QSOs were made.

9. PLAQUES:
Plaques will be awarded to the winner in each class in each continent,
Japan, Zone 3/4/5 and World.
Top USA Single operator will be invited to Japan to receive the plaque.

(Free two way ticket will be donated by Bear JA7RHJ.)

10.AWARDS:
First place certificates will be awarded in each class in every country
and in each call area of the USA.

11.SPECIAL CONTEST AWARD:
Any entrants who worked all Japanese prefectures (01 to 47) during
the contest period can request a Special Contest Award with the
separate worked list with free of charge.
Stations callsign, time, band must be indicated ordered prefecture
number in the list.

12.REPORTING:
A original log and a summary sheet will be requested with a SAE
+ one IRC but any log forms will be accepted.
All entries must be postmarked no later than 31th December and
they should be sent to
JIDX contest "PH", c/o FIVE-NINE MAGAZINE
P.O.Box 59, Kamata, Tokyo, 144 Japan
The contest results will be sent with one IRC and SAE.

Email log submittion will be judged with the time stamp of the
email and it should be sent to
jidx-log@dumpty.nal.go.jp (Log submittion only)
The acknowledgement will be sent when the email log is received
and the result also will be sent by email.

13.DISQUALIFICATION:
Violation of the contest rules.
False statement in the report.
The decisions of the JIDX contest committee are final.

[end]

I'll still be glad to e-mail this direct to you in addition to posting to
the net.

Although I don't have access to a SB system, Super Morse 4.10 claims SB
capabilities.

It can be Anonymously FTPed from:
oak.oakland.edu:/pub/hamradio/pc/theory-and-morse/sm410.zip

I Actually think that would be a good title for ALL
CLASSES of operators. But then on the other hand, the PTT
button on a mike is sometimes refered to as 'A KEY!'

>KB2PWM

This would be illegal.

You are right - "amateur radio transmissions only legal if they're 2-way w/
other hams..."

The only real exceptions to the rule are:

- Tossing your call out on HF or a repeater to establish a contact

- Performing a QST - broadcast to all hams, which is normally not done,
and would be considered bad operating practice.

: Just out of curiosity, what is located in the 824-851 MHz range? I
: notice that most scanners do not cover this range. My guess is TV, but I
: am willing to be proved wrong. Thanks in advance...

The cellular radio mobile transmit range is 824 to 849 MHz. The cellular base stations transmit from 869 to 894 MHz. A few years ago, it became illegal to sell scanners that cover these ranges. More recently, it became illegal to sell scanners that are *easily modifyable* to cover these ranges.

I don't know whether it is legal or not to sell frequency block converters that would simply move these bands to where scanners could pick them up. Does anyone know?

Later,

Source record: 258294

The BEST source of info on ham license tests in the MD/VA/DC area is surely "Autocall", the newsletter of the FAR. The September issue lists five (5) pages of coming exam sessions.

"Autocall" can be obtained ($1) at all the local ham stores and from PO Box 7612, Falls Church, VA 22040-7612 .

Its 56 pages include club columns from many area clubs (a newcomer should try out some club(s)), and about 11 other articles.

Buckmaster has international calls on their CDROM. Its by no means complete,
but it's a good start. The only problem is that the file is encrypted,
and the lookup program is compiled for DOS with no source, so even if you
buy the CDROM, you can't use it on a Unix machine or some-such machine
for purposes of putting a "server" up.

Tell me about it, it's certainly dangerous to my repeater.

>If a windshear is detected I believe a warning is automatically
>transmitted to nearby aircraft, correct? Is it possible
>for an HT to confuse the radar and trigger the system?

No, these systems do not automatically transmit warnings. That's
a different short range system used on airport property. These
big honkers run megawatts ERP firing straight up from "rural"
sites. They are used to do atmospheric profiles looking for
conditions that promote windshear.

> I don't hate you, I don't hate anyone.
> Hate is what the gays have for those like me.

Oh please. You say you don't hate homosexuals, and yet you later equate them with: "sex-criminal such as child molesters, beasteality practitioners or rapists." You say you don't hate homosexuals, and yet you blame them squarely for the destruction of society. You say you don't hate homosexuals, and yet you call them evil: "...sickening weirdness and hell-bent evil of homosexuality."

Can you not hear your own words? "Hell-bent evil" is pretty conclusive proof to me of your hatred; it seem to me that you are the one with the real problem. Does anyone doubt now why there is a need for support groups like LARC in amateur radio?

I support gay rights, and it really sickens me whenever I hear words like those of KE4KUZ that spread hatred and damage the reputation of the Amateur Radio Service.

Just a couple of comments about learning CW and/or building up your speed: Everyone learns a little differently, and "tricks" that work for some may not work for others. However, it is worth trying the different "tricks" you hear about just to find out what will work for you and what won't.

Remember that learning the code is a really a combination of two things: At slow speeds it is an *acquired skill*, like typing, not some intellectual achievement. In fact, intellect and technical ability have nothing to do with it. As an example, during WWII the USAAF used illiterate natives to copy CW position reports (at about 12 WPM) from aircraft being ferried back to the U.S. at the end of the war. They were traind by being taught "When you hear this sound (code character) huit this key (on a typewriter)." As the story was related to me, the natives had no idea what the sounds or the symbols on the keys meant, but they had no trouble copying.

As you move above 20 WPM it really becomes a *language* learning process, because it high speeds you no longer can pick out individual characters. So, your learning mechanism is going to be different.

But, it's fun thing to do, IMO, although it may not be everyone's bag. Keep it up!

HR AMSAT ORBITAL ELEMENTS FOR WEATHER SATELLITES
FROM WA5QGD FORT WORTH,TX October 21, 1994
BID: $ORBS-294.W
TO ALL RADIO AMATEURS BT

Satellite: NOAA-9
Catalog number: 15427
Epoch time: 94292.88370020
Element set: 997
Inclination: 99.0368 deg
RA of node: 344.7413 deg
Eccentricity: 0.0014153
Arg of perigee: 226.0662 deg
Mean anomaly: 133.9343 deg
Mean motion: 14.13651631 rev/day
Decay rate: 9.3e-07 rev/day^2
Epoch rev: 50787
Checksum: 313

Satellite: NOAA-10
Catalog number: 16969
Epoch time: 94292.93882383
Element set: 898
Inclination: 98.5100 deg
RA of node: 298.1417 deg
Eccentricity: 0.0013220
Arg of perigee: 330.2394 deg
Mean anomaly: 29.8030 deg
Mean motion: 14.24909944 rev/day
Decay rate: 6.1e-07 rev/day^2
Epoch rev: 42026
Checksum: 314

Satellite: MET-2/17
Catalog number: 18820
Epoch time: 94292.73838504
Element set: 438
Inclination: 82.5447 deg
RA of node: 169.5198 deg
Eccentricity: 0.0015757
Arg of perigee: 186.9368 deg
Mean anomaly: 173.1573 deg
```

Mean motion: 13.84723805 rev/day
Decay rate: 3.3e-07 rev/day^2
Epoch rev: 33959
Checksum: 357

Satellite: MET-3/2
Catalog number: 19336
Epoch time: 94293.21289585
Element set: 342
Inclination: 82.5359 deg
RA of node: 235.1966 deg
Eccentricity: 0.0016829
Arg of perigee: 316.3575 deg
Mean anomaly: 43.6213 deg
Mean motion: 13.16969429 rev/day
Decay rate: 5.1e-07 rev/day^2
Epoch rev: 29971
Checksum: 337

Satellite: NOAA-11
Catalog number: 19531
Epoch time: 94292.90893343
Element set: 814
Inclination: 99.1837 deg
RA of node: 284.9453 deg
Eccentricity: 0.0012089
Arg of perigee: 138.8878 deg
Mean anomaly: 221.3200 deg
Mean motion: 14.13020260 rev/day
Decay rate: 2.0e-08 rev/day^2
Epoch rev: 31275
Checksum: 295

Satellite: MET-2/18
Catalog number: 19851
Epoch time: 94291.81358147
Element set: 343
Inclination: 82.5190 deg
RA of node: 45.3496 deg
Eccentricity: 0.0012849
Arg of perigee: 238.8123 deg
Mean anomaly: 121.1778 deg
Mean motion: 13.84373737 rev/day
Decay rate: 5.4e-07 rev/day^2
Epoch rev: 28479
Checksum: 337

Satellite: MET-3/3
Catalog number: 20305
Epoch time: 94293.33338987
Element set: 177

Inclination: 82.5518 deg
RA of node: 183.4574 deg
Eccentricity: 0.0007260
Arg of perigee: 356.0882 deg
Mean anomaly: 4.0192 deg
Mean motion: 13.04426314 rev/day
Decay rate: 4.4e-07 rev/day^2
Epoch rev: 23921
Checksum: 290

Satellite: MET-2/19
Catalog number: 20670
Epoch time: 94289.02064607
Element set: 843
Inclination: 82.5417 deg
RA of node: 112.5063 deg
Eccentricity: 0.0015863
Arg of perigee: 163.0619 deg
Mean anomaly: 197.1069 deg
Mean motion: 13.84180243 rev/day
Decay rate: -2.9e-07 rev/day^2
Epoch rev: 21733
Checksum: 299

Satellite: FY-1/2
Catalog number: 20788
Epoch time: 94292.99424304
Element set: 142
Inclination: 98.8205 deg
RA of node: 309.0980 deg
Eccentricity: 0.0015198
Arg of perigee: 32.1908 deg
Mean anomaly: 328.0107 deg

Hello:

Does anyone have any mods for the Yaesu 5100 mobile. I am especially interested in CAP bands (both xmit and receive), but would be interested in all available.

Thanks

Ken

Your point about it being different is taken, although morse code is never a language in the strict sense. It is still only a way to encrypt another language, like English. You are still copying English, but instead of recognizing letters you are more likely to recognize groups of letters.

(Sort of like when you read, or at least when I do, you don't have to sound out every letter. You recognize the *word* or the groups of letters. When you first learned how to read, you couldn't do this, but with practice it became much easier. You're just "reading" the English--or whatever language--from the transmission.)

This much I'll agree with. The guy is clearly a homophobe.

> Does anyone doubt now why there is a need for support
>groups like LARC in amateur radio?

This I won't agree with.

I can't think of a SINGLE reason why there is a need for "support groups" of ANY kind in amateur radio. Where is this need for support groups among stamp collectors? Among football fans? Among hang-gliders? Among scuba divers? Among boaters? Skiers? Bird-watchers? Modelers? I am certain that there are plenty of gays AND homophobes in all of the above hobbies, yet they pursue their hobbies without any "NEED" for gay hobbiest support groups.

If you need a support group because people discriminate against you, fine. Just don't pretend that discrimination against gays in amateur radio is somehow "different" than the discrimination you face outside of ham radio. If LARC didn't exist, the issue of sexual orientation of hams would never even come up in the context of amateur radio.

LARC is not a support group; it's a social club. Don't pretend it's any more than that.

>who do they listen to on 154.6?)

Watch for McDonalds to dissapear from the airwaves! I Champaign, IL, they have built an additional window for face to face service in the drive thru line. In addition, there is a sign indicating this in the place where the order speaker was located. It appears maybe it is a test to see how it is accepted. I am not surprised with the poor quality of most "intercom" ordering systems. The system was on 35.02 when it ran.

1093. North American Collegiate Radio Club Championship

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 15:03:01 UTC
From: barron@rmc.liant.com
Message-ID: <1994Oct21.150301.24345@lpi.liant.com>
Source record: 258060

Inaugural North American Collegiate Amateur Radio Club Championship

1. Object: For college and university stations in all ARRL and RAC sections to participate in the ARRL November Sweepstakes and compete against other college and university radio clubs.

2. Contest Rules: CW portion takes place on first full weekend of November (Nov 5-7), phone portion takes place on third full weekend of November (Nov 19-21). Both start on Saturday 2100 UTC and end on Monday 0300 UTC. All rules, as stated in the October issue of QST, pertain to this collegiate competition.

3. Station Location: In an effort to encourage club station improvements all contacts must be made from the established club radio station located on a college campus. No "portable" operation from a nearby contest "super station". A club may operate from a member's station provided that a club station on campus does not exist.

4. Results: Separate champions will be determined for CW, phone and combined scores. Official results will be based on those published in QST so all participants are required to submit a valid log to the ARRL. Participants must also submit a score summary (the contest summary sheet, NOT a complete log!) to the collegiate contest moderator. Provisional scores and winners will be posted on the ham-univ and cq-contest mail reflectors by the moderator. Send results to:

Internet: barron@rmc.liant.com
Mail: Robert Barron
P.O. Box 180703
Austin, TX 78718

5. Awards: To be determined. The ARRL has been asked to provide official SS certificates to the top ten finishers.

This means:
1. Not limited to multi-op single transmitter if multiple ops not available.
2. Not limited to US stations only (though still North America only).
3. All club members allowed to participate (not just students).
4. Club station rule waived when no club station exists.

Jeff Tucker (N9HZQ) is keeping a list of college clubs that are planning on participating in this year's Collegiate Championship. To add your club to the list send Email (with your club's name and callsign) to: tucker@eedsp.gatech.edu

Paul H. Bock (phb@syseng1.melpar.esys.com) wrote:
: not work for others. However, it is worth trying the different "tricks"
: you hear about just to find out what will work for you and what won't.
[snip]
: aircraft being ferried back to the U.S. at the end of the war. They
: were traind by being taught "When you hear this sound (code character)
: huit this key (on a typewriter)." As the story was related to me, the
: natives had no idea what the sounds or the symbols on the keys meant,
: but they had no trouble copying.

: As you move above 20 WPM it really becomes a *language* learning
: process, because it high speeds you no longer can pick out individual
: characters. So, your learning mechanism is going to be different.

I just picked up a set of tapes at Tucker's that uses this kind of teaching technique. They are the Jerry Ziliak Radio School tapes. Unlike most basic learning tapes, he does not start out with 5 wpm code. Characters are sent at 21wpm using the Farnsworth method. One thing very different from any program or tape that I've listen to so far, is that when presenting the characters for the first time he leaves very little space between. You are encouraged to say the character as soon as the last dit or dah comes through. The characters are sent 10-20 times (I haven't had time to count yet). It makes you listen to the SOUND of the pattern and associate that immediately with the letter, rather than giving you time to think about the pattern, then translate.

The first 2 hours of the tapes are learning the code at the 21 wpm character speed. The last 2.5 hours are practice sessions broken up thusly:
short 3wpm/long 5wpm/short 7wpm(the long/short representing the length of that particular speed segment), then 5/7/9 and continuing like this until 19/21/23. I don't remember the exact lesson breakdown and that stuff is at home, but I can post/email the details if anyone is interested.

So far it seems like a really good system. I had started studying the code a couple of weeks ago using Morse Academy, but this seems to be a much better way to learn all the characters and get your speed up.

The 3 tape set is 4.5 hours long and cost 19.95. He also has a set of tapes to learn commonly sent words as single patterns, along with single tapes for 13 and 20 wpm, and some theory tapes. At least that what Tucker stocks. The tapes are also available by mail.

I am not an any way affiliated with Ziliak, just a satisfied customer.

|>Colombia, South America. He's not a ham but has a short wave radio. Would
|>it be legal for me to make a one-way transmission intended for him to
|>hear, or are amateur radio transmissions only legal if they're 2-way w/
|>other hams?

Transmissions must in general be two-way, i.e. no broadcasting. Only certain forms of one way transmissions are allowed such as telecommand, brief test transmissions, telemetry, and code practice. Also two-way transmissions are only allowed with other amateur stations except under a couple of specific cases such as emergencies, RACES, and military stations during an Armed Forces Day Communications Test. See Part 97.111 for more details.

For your brother-in-law, see if he can find a nearby Columbian amateur that would allow him to talk to you. Columbia has a third party agreement with the U.S. and as such you could talk directly to your brother. Perhaps the Columbian station could set up a phone patch (if allowed by Columbian PT&T authorities) that would also let you talk to him. Or better yet, see if you can get him interested enough in amateur radio to get licensed.

: Although I don't have access to a SB system, Super Morse 4.10 claims SB
: capabilities.

I've e-mailed Tim with my comments already about SB support in SM, but I thought I'd say something here. I tried getting SM 4.1 to work with my SB and did not have any luck. Selected the SB option in the set-up, but it still directed sound to the PC speaker, yechh. Didn't look into it very far, as I had also just DL'd the current version of Morse Academy and it works great with the SB. Besides, I think I like MA's presentation and bit better than SM's.

JMHO.

You cannot watch on the spectrum analyzer screen but you can use a
video monitor and the spectrum analyzer. set the spec anal. to zero
span (time domain) set the vert scale to linear.

Same as listening to AM or FM signals with a speaker.

You will not be able to get video and audio at the same time for a
TV signal.

When I first passed my Novice and exam and found myself in the market for a solid-state HF rig w/ a good feature set but cost less than $1000, I found myself deciding between a used 757GXII and a used Icom 735. After doing a lot of research and talking to a lot of hams who have used or sold or repaired both rigs, the answer I almost universally got between the 2 rigs was BUY THE ICOM 735. Better design. Better reliability. Better performance. The 735 is a classic that's easy to find on the used market for approx the same price as the 757GXII.

Perhaps you should reconsider which rig you should be shopping for.

You don't have to hate someone to recognize their sickness, or understand the evil that they practice. The mentally ill should be pitied, offered treatment when possible, and confined only if they continue to present a risk to society through their abberrant acts.

Seattle, WA October 21, 1994
To all radio amateurs

SB PROP ARL ARLP043
ARLP043 Propagation de KT7H

Solar activity was up this week, and the K and A indices were quite low. Tuesday and Wednesday had many three hour periods when the K index was zero, which means stable conditions with low absorption. Coupled with solar flux over 90, we have had better conditions compared with what we have experienced over recent weeks.

This will change however, because of a recent solar flare. A disturbance generated by this flare is expected to hit this weekend, on October 22 or 23, which should be reflected in higher A and K indices. Check WWV for updates. Every three hours there is a new K index, and anything above three means degraded conditions with higher absorption. Since the K index is not linear, each change of one point is very significant. A K index of 4 is disturbed, and 5 is truly awful.

Another disturbance is expected at the end of the month, due to a recurring coronal hole. Look for the worst around October 30 and 31, with poor conditions probably lasting through the first few days of November. The solar flux should decline down to around 80 around November 5 and 6, and then rise back to 90 before the middle of the month.

Sunspot Numbers for October 13 through 19 were 69, 88, 98, 83, 68, 78 and 93, with a mean of 73. 10.7 cm flux was 93.1, 92.6, 92.7, 91.7, 91.6, 90.5 and 90.7, with a mean of 91.8.

The path projection for this week is from Portland, Oregon to Pitcairn Island.

80 meters looks good from 0300z to 1330z, and 40 meters from 0230z to 1400z. Check 30 meters from 0130z to 1500z. 20 meters should be open from 1500z to 1800z and again from 2300z to 0330z. There may be openings between those times, but with weaker signals. 17 meters

looks good from 1600z to 0200z, and 15 meters from 1700z to 0030z.
12 meters should be open from 1900z to 2300z. 10 meters should be
open on many days from 2000z to 2200z.

>This seems to be an incredibly dangerous choice of a frequency.
>If a windshear is detected I believe a warning is automatically
>transmitted to nearby aircraft, correct? Is it possible
>for an HT to confuse the radar and trigger the system?

ground wind profilers work around 449 MHz. they primarily look up. probably cause a problem with some repeater systems, they're not bothered much by an FM carrier, you'd think (or hope..).

the stuff on the plane is based on the weather radar in the plane. that's X band stuff.

an awful lot of signal processing goes on to get clear air turbulence detection..i actually think it's amazing that it can be done at all...and radar in general uses a lot of computer power to permit detailed analysis of the returns...I don't think it's just a simple pulse scheme either.

i think the only automation to get a warning to the pilot is over the comm radio...windshear detection is still in its infancy so i don't think the pilots would act on a uncorroborated windshear annunciation alone...and in some cases there may be nothing to be done except ride it out, apply power and get ready to go around..as the equipment designers and flight crews get experience with these new fangled gadgets, it will probably become indispenceable...if there was a way to tie up the profiler data with aircraft detection data quickly and accurately, you'd probably get a neat 3D view of the winds at the airport...

>huit this key (on a typewriter)." As the story was related to me, the
>natives had no idea what the sounds or the symbols on the keys meant,
>but they had no trouble copying.

The OSS used natives in Algeria as intercept operators. They were able
to copy at speeds of 40+ WPM purely on conditioned motor reflex. They
had no idea what the sounds or symbols meant. Ordinary US intercept
operators in Alaska and other listening posts around the world operated
the same way, as did ordinary radiomen on ships and shore stations during
the war. That's because the message traffic was *encrypted 5 letter blocks*
with no plaintext "language" meaning whatsoever.

The best operator I ever knew could copy 60+ WPM on a typewriter, but had
no idea what he'd copied until he rolled up the paper and read the text.
He was trained as a Navy operator in WWII. He always maintained that the
trick to rapid copy was to never think about it, just let the body do the
work it was conditioned to do. He said that trying to make sense of text
while copying was a sure way to make errors. He could carry on an unrelated
conversation with someone in the radio room while copying. He said that made
no difference since his conscious mind wasn't involved with copying, that
it was all conditioned reflexes at work.

I understand that most hams don't do Morse that way, but then most
hams couldn't copy coded text error free for hours at a stretch
either. They let their brains get in the way, trying to translate
the sound patterns into letters, group the letters into natural
language words, and attempt to understand meaning on the fly. That's
like trying to juggle a running chainsaw while tap dancing and composing
a sonnet, all at the same time. No wonder learning Morse is hard for
most hams.

> As you move above 20 WPM it really becomes a *language* learning
>process, because it high speeds you no longer can pick out individual
>characters. So, your learning mechanism is going to be different.

Morse encoding is never "language". It's an encoding of Roman
alphanumeric symbols, no different in principle than ASCII.
Those alphanumerics may be combined to represent tokens in a
natural language, or they may just be encrypted groups, but
the Morse encoding itself isn't language. Copying Morse is
a modem process. Most people don't confuse what a modem does
with language, but because Morse modems are generally wetware,
some people do confuse the medium with the message in that
case.

1109. Re: TUTORIAL: dB & dBm

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 17:59:27 UTC
From: defranco@fermi.cs.rl.af.mil
Message-ID: <1994Oct21.175927.13608@news.rlcn.rl.af.mil>
Source record: 258323

Great introduction - well done, except for one minor nit.
A decibel is always relative. As you clearly demonstrate,
the decibel is the log of a ratio of two quantities. As such,
the resulting number is always relative. By fixing one of
the quantities, say as one milliwatt, you simply define one
of the two. That doesn't make dBm an absolute quantity.
Othewise, great.

1112. Re: 5/6 tones code for pagers?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 18:29:49 UTC
From: rshepard@interaccess.com
Message-ID: <3891at$58n@nntp.interaccess.com>
Source record: 258023

most of the frequencies used for 5/6 tone paging can be found in just
about any Motorola 5/6 tone pager's manual. Actual cap code can vary
from service to service. But if you are simply looking for the tones
in order to activate a unit, see the book.

I know there are standard Cap Code plans for 2-tone paging, but I
don't know if there is, or ever was one for 5/6 tone.

1113. More Satellite tracking for amateurs

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 18:31:37 UTC
From: caralt@gaig.upc.es
Message-ID: <3891e9INN5th@diable.upc.es>
Source record: 258315

I am gratefully surprised by all the interest showed through E-mail by this project. In response to all the people that required more information I would like to extend myself a bit further over the Static Satellite Tracking Device.
The system consists in a planar array of 19 elements. The disposition is crucial because of the frequency band I'm considering: UHF. By crucial I mean that a minute change in any of the describing factors of the array could ruin the beam shape and thus its directivity. This consideration is a hard limiter because it considerabily reduces the number of possible configurations. After a long period of tests and computer simulation I have decided that the best configuration is hexagonal, with all the elements spaced about half wavelength (this "about" is specially tricky) filling the hexagon in a triangular lattice. Many other configurations were considered (circular, square, linear, etc) but none proved to be so efficient in terms of directivity versus beam direction.
The next step is the control of the beam. We must take into account that most amateur satellites cross the sky in few minutes. Thus, an easy and fast control system must be used. Because I wanted the array to be totally static, the only way to move the beam is to gradually change the elements phase, as widely known. Using a small algorism I can find the adequate phase for each element and thus, direct the beam towards the place desired (that is, where the satellite is).
Another important decision to take is what radiating elements should be considered. As you
may well know, most satellites transmit with circular polarisation: that is because at this
frequencies is not possible to use linear polarisation because of Faraday's Rotation. So, we must find an element that, radiating together with the rest of the elements of the array, the transmitting-receiving electric field be circular polarised (the sense of rotation CW or CCW is also to be considered). I have carried out several computer simulations because I wanted to study the change in polarisation of the electro-magnetic field due too the changes of direction. You all know about this: imagine a radiating loop placed in the XY plane. The polarisation in the z-axis (elevation=90 degrees) is circular (CW or CCW depending on the sense of the feeding current). But as you decrease elevation, polarisation is no longer circular but elliptic. So, if the satellite is transmitting circular we get signal loss, depending on the excentricity of the ellipse. I've concluded that the best option is to use crossed half wave dipoles fed by equal current amplitude but a phase shift of 90 degrees to obtain circular polarisation.
Computer simulation showed that we can get almost 16 dB of directivity (gain) at elevation angles of 30 degrees. This means that the array can track satellites in a range of 120 degrees, which I thing is quite remarkable.
If we can accept a loss of 3 dB the range increases to 140 degrees.

At present, I'm working on the design of the RF part. Things to solve are (suggestions will be welcome):

1. Normally arrays have much noise problems than other devices. Fortunatelly I found an article containing some solutions, but eventhough we must use a pre-amp for each element. This amplifier has to have a good noise figure (and has to be cheap too!). I've been searching quite thoroughly but I can't find a suitable transistor (Phillips, Siemens, Advantek, etc).

2. The usage of a pre-amp implies a switching device that differenciates th transmitting and the receiving. I would like to use an electronic device if possible, but a mechanic one should prove fine provided is easy to switch.

3. Phase shifters are made of lines of different lengths. The appropiate one is selected by diodes, depending of the phase the radiating element has to have. Because we are working with RF signals, the parasite condenser must be very low. PIN diodes have very low values, but are difficult to find.

I would also thank anyboody that could give information on:

4. Is there any phase shifter in chip?
5. Is there anybody who knows something about high directivity planar arrays? Am I the first to attempt doing such a device?
6. If you are an Amateur Satellite operator, I'll be delighted to know something about the most usual problems you have to cope with.

Yours faithfully

1114. REVIEW: TUNING IN TO R.F. SCANNING by Bob Kay, TAB BOOKS 1994

Newsgroup: rec.radio.amateur.misc

Review: TUNING IN TO R.F. SCANNING - from polic to satellite bands
Author: Bob Kay - TAB Books Division of McGraw-Hill Inc. 1994
ISBN: 0-07-033964-3 $14.95

This short book (150 pages) is an excellent guide for beginners to the fascinating world of scanner radio monitoring. It is well written in an informative style and addresses the main questions and issues of concern to someone with little or no knowledge of the subject.

The first chapter is devoted to information and advice on selecting the proper scanner to suit the listener's needs. Authou Kay explains the terminology and what the various specifications mean in everyday language. In addition, he covers the different controls, functions and features of today's popular scanning radios. The second chapter covers the different types of antennas, installation and most important, advice and warnings on the subject of lightning. Chapter three deals with coaxial cable and connectors.

The book changes focus with the fourth chapter which is entitled Rules and Guidelines, and covers subjects like the radio spectrum, frequency spacing, false frequencies such as birdies and images, simplex/duplex transmissions, repeaters, narrow and wide-band and the differences between AM and FM. Chapter five is devoted to scanning legalties, including the Electronic Communications Protection Act of 1986 and state laws that govern scanning radios.

The final chapters covers popular monitoring targets such as amateur radio, baby monitors, business communications, news media, railroad, fast food (no kidding!), aircraft, cordless microphones and telephones, fire, Medivac, military, ship-to-shore, police and Federal law enforcement, outer space and sports teams. There's even a section on monitoring the President. The chapter on frequency listings contains a wealth of frequencies for the novice to explore, and tips and advice on how to search. There's a section on computers and scanning, clubs and magazines with a detailed listing of addresses and contacts. The book concludes with a question and answer section and an index.

I was impressed by the amount of good information packed into 150 pages and would not hesitate to recommend this book to anyone who has become interested in monitoring the VHF and UHF radio spectrum or has just received or purchased a scanning radio. I only wish TUNING IN TO R.F. SCANNING had been available when I first became interested in scanners It would have saved me a lot of time.

Always do research at your friendly public library. Sams Photofacts publishes a full series of just about everything electronic. If the local library doesn't have it, they can get it. They may need to do an Interlibrary Loan search, and your info will probably be found at some well-equipped technical library. Since older things of this nature might not be loaned out, I'd bet you could get a photocopy made for a nominal charge.

>Straight - and proud!

I don't see how a gay amateur radio club brings our hobby into disrepute any more than a motorcyclist amateur radio club or a QRP enthusiast amateur radio club or an over 25 years licensed amateur radio club.

In other words, if you don't want to join LARC, don't. But don't deny LARC's "right" to exist and publicly advertise simply because you don't approve of their "thing".

It is simple; if the discussion is about the right for a gay amateur radio to exist and be treated like any other special interest amateur radio group, I don't see what the problem is. Of course special interest amateur groups ought to exist without discrimination.

If the discussion as about the gay lifestyle, then it isn't about amateur radio and you probably ought to find a better forum. I, for one, do not think that the simple mention of LARC, or even a few people defending LARC, represents offensive activity.

Defending one's own rights is not militancy.

I understand it has to do with a copyright protection scheme Dean and Jack
employed.
That is, they look at the header info on the incoming packet and if your
callsign and the
call that is burned into your version of DXBASE don't match, you are
disconnected from
packet. The program does this intentionally.

Next time I see Dean or have the chance to write him, I'm going to personally
tell him that even though I think he is a great person and he and Jack have
developed a
fantastic program, this was an unnecessary and back - handed method to prevent
piracy. It is, I predict, going to cause them more problems and customer
dissatisfaction that it will be worth.

The first version of DXBASE turned me off with its copy protection scheme, even
though it was deleted in (I think) version 2. Now that I have finally upgraded
to a decent computer (486 DX2/66), as soon as I get a tape back-up unit I plan
to order the next version of
DXBASE that doesn't have this anomaly. You DXBASE users do back up your
database
regularly, don't you???

By the way, my dislike of this copy protection scheme has nothing to do with my
appreciation of Dean and Jack's work. It is not a slam against them; I think it
was just a bad design decision. DXBASE is, overall, a fantastic tool IMHO. I
should be smart enough to develop something as sophisticated!

=========
SpaceNews
=========

MONDAY OCTOBER 24, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* AO-21/RS-14 GOES SILENT *
===========================
A "Total Shutdown" of the amateur radio payload AO-21 (including the
CW-beacon on 145.818 MHz) on the main spacecraft INFORMATOR 1 occured
between 94-10-12 15:00 UTC and 94-10-13 11:42 UTC. Any telemetry captured
during this interval would be very helpful in trying to determine the
reason for the shut down. Telemetry reports should be directed to the
AO-21 spacecraft controllers:

- via PACKET to Robert: DD4YR @DB0AAB.#BAY.DEU.EU
- or via INTERNET to Peter : db2os@amsat.org

Many thanks in advance.

73s Peter, DB2OS
Gerhard, DG2CV
Robert, DD4YR

* KEPLERIAN DATA VIA E-MAIL *
=============================
As a service to the AMSAT satellite community, The Dallas Remote Imaging
Group is providing an automated email response service to request satellite
keplerian elements via email request.

To obtain the latest satellite keplerian elements, simply send an email
note to the following addresses for the specific set of satellites
that you would like. New e-mail address services include:

elements@drig.com
amsatkep@drig.com
intelsat@drig.com
weathkep@drig.com
shuttle@drig.com
info@drig.com

An email message to elements@drig.com generates a response with NASA 2-line elements for the week, email to amsatkep@drig.com generates a response with AMSAT style explicit keplerian elements, email to intelsat@drig.com generates the Ted Molczan Intelligence sat keplerian elements, email to weathkep@drig.com generates the listing f weather/imaging satellite keplerians, and email to shuttle@drig.com generates the latest STS-XX shuttle mission keps during active STS missions only.

To use this service, simply address your email to the above addresses, and the latest of the keplerians will be forwarded to your email address. The body of the letter can have anything in it.

The 56 kbps line will be installed at DRIG in early December, and at that time the software will be modified for telnet and ftp capability.

[Info via Jeff Wallach, N5ITU, of the Dallas Remote Imaging Group]

* VE3ONT EME NEWS *
==========
As previously announced, the Toronto VHF Society's proposed EME operation in late October has been cancelled due to a newly scheduled international supernova observation set for the same time period.

We have been advised by the Institute foe Space and Terrestrial Science (ISTS) that they will do everything possible to ensure availability of the 46 meter antenna for the November 26-27 contest weekend. VE3ONT will operate on both of these days on 144.100 MHz (listening 144.100 - 144.110).

In addition, ISTS has informed us that the antenna is currently available to us on the two days prior to the November contest weekend. VE3ONT *may* operate on Thursday Nov 24 and Friday Nov 25 on 50 MHz, 1296 MHz, and/or 10 GHz. These plans are tentative and subject to change. Announcements will be made on the EME nets, packet BBS, and Internet when the details are finalized.

Everyone should be reminded that dish availability is always subject to last-minute changes. As non-paying users at the Space Complex, we are obliged to bow to commercial operations. Please also keep in mind that winter weather at the end of Novemebr can be very unpredictable and may have a great effect on our success.

Stay tuned to the nets for up-to-date announcements or call Peter Shilton (VE3VD) at (905) 774-8766 evenings or Dennis Mungham (VE3ASO/VA3SO) at (613) 998-7330 days.

[Info via Michael Owen W9IP]

* THANKS! *

1123. Long story about railroad telegrapher

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 21:08:30 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9410212108.AA01354@metro.mccneb.edu>
Source record: 258196

I have a long reminiscence by a railroad telegrapher (one person's experience, written in 1940). Anyone interested, send a note requesting it to me (directly, not to the list).

Paul Marsh N0ZAU pmarsh@metro.mccneb.edu

1124. Drake

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 21:22:09 UTC
From: sparker@phoenix.Princeton.EDU
Message-ID: <1994Oct21.212209.24668@Princeton.EDU>
Source record: 258134

Can somebody give me info on the Drake Net that I think meets on 80 meters?

I'm trying to track down a good place to get my TR-4C repaired.

Or can you give me the name of a good repair person close to
the Princeton area (the radio and supply are very heavy)?

Thanks very much for your help.

Please send email to sparker@theory.pppl.gov

1125. CQ & GEnie

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 22:16:23 UTC
From: wb2mpk@gti.gti.net
Message-ID: <389ejn$d2v@gti.gti.net>
Source record: 258326

GEnie just sent out this press release today:

CQ, POPULAR COMMUNICATIONS, GO ONLINE WITH GEnie

CQ Communications, Inc., one of the largest publishers of radio & electronics related magazines, books and videos, will be available for product support on GEnie, the online service from General Electric Information Services, Inc . The announcement was made by Glen Johnson, WB2MPK, manager of GEnie's Radio & Electronics RoundTable .

GEnie subscribers will be able to access product information, subscribe to magazines, and communicate directly with CQ's staff online. "We welcome CQ to the Radio RoundTable; we feel their presence on GEnie will be a tremendous benefit to CQ's readership and GEnie members alike" said Johnson .

CQ Communications publishes five magazines; CQ - The Radio Amateur's Journal, Popular Communications, Communications Quarterly, Microcomputer Journal, and Electronic Servicing and Technology, each of which will be represented on the Radio & Electronics RoundTable . CQ's magazines boast a total circulation of over 200,000 .

Johnson says that CQ will have a support area within the Radio & Electronics RoundTable, which is expected to be available to GEnie users by early November.

For more information on GEnie, call 1-800-638-9636 .

1126. Callsign server

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-21 22:58:37 UTC
From: morawski@starbase.starbase.mitre.org
Message-ID: <MORAWSKI.94Oct21185837@starbase.starbase.mitre.org>
Source record: 258181

I've tried the callsign server at qsl-info@aug3.augsburg.edu several times with a known call (mine!) and it comes back with "callsign not found". I also tried with "G5RV" and obtained the same result.

Tips anyone?

Paul Morawski, AA3DD
morawski@ai.mitre.org

1127. IPS Daily Report - 21 October 94

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 OCTOBER AND FORECAST FOR 22 OCTOBER - 24 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 88/32

GOES satellite data for 20 Oct
Daily Proton Fluence >1 MeV: 2.5E+07
Daily Proton Fluence >10 MeV: 1.1E+06
Daily Electron Fluence >2 MeV: 1.8E+07 (normal)
X-ray background: B3.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Oct 23 Oct 24 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Oct: 88/32

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 20 Oct
Learmonth 5 3211 1111
Fredericksburg 8 7
Planetary 10 6

Observed Kp for 20 Oct: 3001 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Oct 16 Unsettled to active
23 Oct 25 Active
24 Oct 10 Unsettled to active
COMMENT: A shock is expected from recent M3 flare at
approximately 1700UT on the 22nd. Active conditions are then
expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Oct normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Oct normal fair poor
23 Oct fair poor poor
24 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
21 Oct 27 near predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
22 Oct 25 Near predicted monthly values
23 Oct 10 About 20% below predicted monthly values
24 Oct 25 Near predicted monthly values
COMMENT: Degraded HF comms on 23rd due to expected flare induced
geomagnetic activity. Nothern Australia communicators should
continue to use the monthly index, as level of geomagnetic
activity is not expected to be severe.

This was found floating on the Amateur Packet BBS system. What do you think?

From : K7WWA@K7WWA.#NOCAL.CA.USA.NOAM
To : INFO@ALLUS

*** FLAME ON
*** I think this needs to be shared.
*** AB6GQ was licensed on 2 Jul 1991. He is now an Amateur Extra (?). He
*** sure must think his is something if he really started this one.
*** FLAME OFF

Original from AB6GQ to SYSOP@NCPA
Path: !KC6PJW!WX3K!WB0TAX!KA6EYH!KA6EYH!W6PW!KA6FUB!WA6RDH!KM6PX!

From : AB6GQ@KM6PX.#NOCAL.CA.USA.NOAM
To : SYSOP@NCPA

Hello dedicated SYSOPs. My name is Fred Sober, and I am the Official
Observer Coordinator for the Sacramento Valley Section of the ARRL. I
am sending this bulletin at the suggestion of some of the local BBS
SYSOPs, who thought you should be aware of the following info:

Approximately one year ago, I initiated a series of correspondance
with John B. Johnson, Chief of the Private Radio Bureau of the FCC.
Due to the confusion of Amateur Radio Packet BBS users regarding
the permissible message content of bulletins, and the growing
tendency to abuse the system, we requested FCC clarification regarding
the definition of "One-Way Bulletins" and "Bulletin Message Content"
as it specifically applied to Amateur Packet Radio. The position of
the FCC is as follows:

1. Any packet message or bulletin sent to ANYTHING other than another
specific Amateur Callsign (EXCLUDING the callsign of the BBS) is
considered to be a "One-Way Bulletin," and as such must comply
with Part 97 in terms of permissible message content for such
bulletins. Also stated was the definition of "anything" (above),
which is such addressing as to ALL, ALLUS, ALLCA, Food, Drugs,
Guns, or anything else, other than another specific amateur
callsign.

2. The information sent MUST NOT BE INTENDED for anyone but other
licensed Amateur. "Intent" is determined by "Message Content," not
by the mental intent of the message originator.

3. The Information sent MUST BE RELATED TO, AND OF INTEREST TO
AMATEUR RADIO OPERATORS ONLY!

4. Any Packet Bulletin which contains material which relates to anything not directly related to amateur radio, or of interest to amateur radio operators only, is considered to be "Broadcasting." This includes material on Cars, Guns, Politics, Food, Jokes, Current Events, etc. etc. etc.

In the above listing the emphasis was supplied by the FCC in the letter I have on file.

For further clarification you may refer to the "FCC Rule Book" published by the ARRL, (1993 Edition). On Pages 6-6 and 6-7 the topic of information bulletins on packet radio is discussed. The highlighted section in the box is a paraphrase of the letters I have on file from the FCC.

Upon notifying the ARRL Rules Department of this Clarification, they made the determination that the abuses in this regard were] so widely spread and prevalent, that the League and the Official Observers needed to undertake an educational effort regarding this ruling, prior to beginning a notification effort on the individual offenders. This would prevent an overwhelming overload of the OO Program.

Some BBS SYSOPS, such as KM6PX, upon learning of this clarification voluntarily and unilaterally decided to set the clarified standards as the operating standard for their BBS's. They began editing and deleting any bulletin traffic which did not comply with the above.

Technically, with the latest rulings by the FCC, the BBS SYSOP is jointly responsible for violations of Part 97, by operators which originate a bulletin through their BBS into the system.

Technically, the FCC can at any time begin issuing NAL's to the Operators and SYSOPS for any bulletins in violation of the above.

Practically, I do not know when the OO Notices and NAL's may start being issued, but it behooves you as a BBS SYSOP to be aware of the current rulings and facts, and hopefully to be in compliance prior to any notification or enforcement actions being taken.

73, keep up the good work! Fred Sober, AB6GQ

*** Yes, Fred, keep up the good work. I'm glad that you are doing all

*** that you can to make Amateur radio packet boring.

*** 73 George K7WWA @ K7WWA.#NOCAL.CA.USA.NOAM

1130. Opinions on the Kenwood TH-22AT wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-22 01:24:11 UTC
From: tomsunman@aol.com
Message-ID: <389pjr$ri9@newsbf01.news.aol.com>
Source record: 257929

I am almost ready to take my Technician class exams. I am currently trying to determine which HT to buy. Today I was shown a Kenwood TH-22AT. From what I was told and from what I could see it seems like a really nice HT. I would please like more experienced opinions on this HT. I was considering the HTX-202 but it seems the Kenwood is a better HT. All opinions appreciated in e-mail or on this newsgroup. The price on the Kenwood is nice as well.

Thank you!

Tom Randall

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.

** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

* Please Send Questions to the Newsgroups, Not the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

1134. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-22 05:13:34 UTC
From: ikluft@oes.amdahl.com
Message-ID: <ham-radio-faq-2-782802722@oes.amdahl.com>

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html
file://rtfm.mit.edu/pub/usenet/radio/ham-radio
all radio FAQs & info:
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html
wais://rtfm.mit.edu/usenet/radio
Federal Communications Commission:
http://www.fcc.gov/
http://www.fcc.gov/1/Private_Radio
North Carolina State HamRadio WWW Server:
http://www.acs.ncsu.edu/HamRadio

Yahoo's Ham Radio Index:
http://akebono.stanford.edu/yahoo/Entertainment/Hobbies_and_Crafts/Amateur_Radio/
EINet Galaxy's Ham Radio Page:
http://www.einet.net/galaxy/Leisure-and-Recreation/Amateur-Radio.html
O'Reilly's Whole Intrernet Catalog's Ham Radio Page:

http://www.digital.com/gnn/wic/hobbies.02.html (Western USA)
http://bond.edu.au/gnn/wic/hobbies.02.html (Australia)
http://quasar.sba.dal.ca:2000/gnn/wic/hobbies.02.html (Eastern Canada)
http://www.wimsey.com/gnn/wic/hobbies.02.html (Western Canada)
http://www.Germany.EU.net/gnn/wic/hobbies.02.html (Germany)
http://www.ntt.jp/gnn/wic/hobbies.02.html (Japan)
http://www.elvis.msk.su/gnn/wic/hobbies.02.html (Russia)
http://src.doc.ic.ac.uk/gnn/wic/hobbies.02.html (UK)
University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 386 PC at home with
over 40 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at ham-server@grafex.sbay.org. This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server seems to have more emphasis
on MS-DOS programs and binary files though there are many plain-text
articles as well.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)
has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,

maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here
is that Netnews is far more prevalent than direct Internet hookups,
accurate name servers, smart mailers and routers, and of course,

telnet and FTP client services. What this means is that your trouble
may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes not running Unix, do not support these
services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 198.137.220.1). The exact IP
number for the site can be obtained via the nslookup utility, if
your computer supports it. (The FAQ does not print IP addresses any
more because they change so often.) Your system may not recognize
the "fully-qualified domain name" (like callsign.cs.buffalo.edu),
but it should ALWAYS recognize an IP number if their network is
reachable from yours.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent. Also, at many education sites, it is common
practice to block telnet connections above TCP socket 1000 or
so in a somewhat misguided attempt to block usage of
"recreational" TCP socket applications such as Multiple User
Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases,
a polite word to the system administrators, pointing out
the worthwhile services available on sockets 2000 and 3000
will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:

telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,

CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for
CAP radio information, these rec.radio.amateur.* groups are available.
CAP-related files are also stored on the FTP site
sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter
band. It was first conceived when propagation was poor on 10 meters,
as a method to get more hams to use 10 meters. The past few years
have been great for 10 meters worldwide. However, "the bands are
closing down" again, and 10 meters will once again be limited more
for local communications, except for sporadic band openings, until
the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call
sign, operator's name and location. Send the list to your numeric
call sign or DX area manager (as shown below), with $5.00 U.S. new
membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently-
-created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

1135. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-22 05:13:51 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)

KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

Now I THINK it was Bob (N6FRI), who replied with this...

>>*** Yes, Fred, keep up the good work. I'm glad that you are doing all
>>*** that you can to make Amateur radio packet boring.

A BIG QSL on the "boring" aspect, OM!

My OPINION is that the message "content" is just as important (if not
more so) as the method by which the data is transferred. I LOVE the
freedom of the Internet.

I have enough of a problem trying to keep my interest in advancing the
amateur radio sota (via cooperative investment in packet infrastructure,
TCPIP/NOS, SS, etc) alive here in Wisconsin what with the total lack of
interest by the vast majority of the AX.25 1200 baud beacon fanatics
around here. Most just don't care about cooperative INVESTMENT (yes,
this takes $$$) in a high-speed backbone.

Now lets make that investment even LESS attractive by LIMITING the type
of traffic to that typical, BORING amateur blather about the weather
and your current health problems. I sware the FCC WANTS us
to die! They'll then have even more spectrum to auction off.

There is a difference between BROADCASTING and POSTING AN ARTICLE
so as to encourage intelligent discussion. While SOME packet
posts are in poor taste (and approach broadcasting), many result
in interesting discussion threads (and yes, a few flame wars).

BIG NEWS: people have different opinions on almost every topic.
One of the advantages of living in a "free" country is the exchange
of those ideas in an open manor.

Commercial telecomm looks better and better every day. Then again,
I'm sure we'll see Internet regulated and censored soon enough.

Maybe those in rec.radio,pirate are right! ;-))

GAY AIRWAVES GROUP SETTLES MAGAZINE DISPUTE

Lambda Amateur Radio Club Settles
Discrimination Case against American Radio Relay League

The Lambda Amateur Radio Club (LARC), a national gay ham radio association, and the American Radio Relay League announced a settlement this week of LARC's discrimination complaint against the League for refusing to publish the gay group's notice in its classified advertising section. This favorable settlement commits the League to adopt a non-discriminatory policy, and provides LARC with attorney's fees, remedies for non-compliance, and free advertising.

"This settlement shows that Connecticut's civil rights law is an effective tool for remedying discrimination," said Suzanne B. Goldberg, a staff attorney with Lambda Legal Defense and Education Fund, who represented the radio club along with cooperating lawyers from the New York law firm of Brown Raysman & Millstein.

For more than six years, the editors of QST, a monthly radio-issues magazine published by the League, rejected LARC's submission of a classified advertisement that read: "'Lambda Net' club for gay hams with members nationwide and Canada. On-air skeds and newsletter. For info write...."

American Radio Relay League, which is based in Hartford, Conn., contended that it rejected the ad for representing a "special interest," although QST continued to publish the ads of other ham radio clubs with memberships ranging from Jehovah's witnesses and Ayn Rand enthusiasts, to missionaries and animal rights supporters.

In one of the first cases to test the reach of Connecticut's state-wide law prohibiting sexual orientation discrimination which took effect in 1991, the state's Commission on Human Rights and Opportunities ruled in February 1994 that it had "reasonable cause" to hold that the League's refusal to print the classified was motivated by bias against the member's sexual orientation. "The issue in this instance is clearly the fact that LARC's members identify themselves as Gay," the commission wrote. Settlement negotiations between the parties have been ongoing ever since.

Under the terms of the agreement finalized today, the League is to publish a non-discriminatory statement in each subsequent edition of QST, run four one-eight page block advertisements, and print six classified advertisements, all at no charge to LARC. In addition, ARRL is to pay $25,000 in attorney's fees, and commit to a policy of non-discrimination towards other lesbian and gay ham radio associations.

"The initial victory at the Commission was an important indication of the seriousness with which Connecticut is treating sexual orientation discrimination complaints," added Goldberg. "This settlement not only confirms Connecticut's resolve, but broadcasts a clear signal that anti-gay discrimination doesn't pay."

I don't listen to the ARRL station, W1AW, but some of the local folks do. Is it true that when their scheduled broadcast time comes they step on any unfortunate enough to have a QSO going on that frequency? Is this deliberate interference or to they have a right to the time/frequency above all others?

: never even come up in the context of amateur radio.

Come on! Think about it! The issue of sexual orientation comes up anywhere and anytime. When a man talks about his wife you think he's not also talking about his sexual orientation? When a woman talks about her husband you think she's not also talking about her sexual orientation? And what about when people talk about their kids? You don't think that implies some sort of sexual orientation?

Obviously you don't see how sex is an important part of people's personal lives and how they make that public. But we see it. We see it everyday.

Source record: 258140

I find the comments from "REAL HAMS" in this conference quite amusing, and at times very tragic. I wonder how many of you REAL HAMS are really aware of what a REAL HAM is, in case you have forgotten, and in most cases have never read this, I think this is the perfect time for you to take a few minutes and read something written by a Ham in 1929, its very short and should be fairly easy for you to read in between the aspersions you so freely cast upon others, or maybe you think this doesnt apply to you because you belong to a different groups of Hams, one whom I do not care to associate myself with... So for those of you who can read here it is.....

THE AMATEUR'S CODE

ONE:

THE AMATEUR IS CONSIDERATE.....He never knowingly uses the air in a such a way as to lessen the pleasure of others.

TWO:

THE AMATEUR IS LOYAL....He offers his loyalty, encouragement and support to his fellow radio amateurs, his local club and the American Radio Relay League, throught which Amateur Radio is represented.

THREE:

THE AMATEUR IS PROGRESSIVE....He keeps his station abreast of science. It is well-built and efficient. His operating practice is above re-proach.

FOUR:

THE AMATEUR IS FRIENDLY....Slow and patient sending when requested, friendly advice and counsel to the beginner, kindly assistance, cooperation and consideration for the interests of others, these are the marks of the Amateur Spirit.

FIVE:

THE AMATEUR IS BALANCED....Radio is his hobby. He never allows it to interfere with any of the duties he owes to his home, his job, his school, or his community.

SIX:

THE AMATEUR IS PATRIOTIC....His knowledge and his station are always ready for the service of his country and his community.

PAUL M. SEGAL 1929

I guess all you real Hams who are condemming the No-Code Techincians and those who make mistakes dont believe in the Amateurs Code or must have one of your own. Maybe it would be a good time to sit down and reevalute your own lifestyle as a Amateur Radio Operator. From what I have read in this conference you have managed to violate every one of the prescribed standards of being a REAL HAM.
If I were you I would hang my head in shame, and apologize to all the Real Hams out there who suscribe to the Amateur's Code, with your attitude you dont belong in this Hobby, and it is a Hobby not a life style or a job. One other thing a Real Ham is proud of his callsign and signs with it every chance he gets, not like the unsigned comments that take place here. I have a real address not a P.O. Box to hide behind.

>>don't care about that. Mostly interested in 40 but 80 would be
>>nice too. I'd appreciate any advice but keep it simple because
>
I have two antennas I use for 40 & 80 meters on my urban city lot.

I have a 5BTV multiband vertical mounted on the edge of the roof, about
10 feet above ground with the counterpoise wires strung on top
the roof. There are two counterpoise wires for each pre-warc band and
the arrangement can best be described as haphazard, with much room for
improvement.

The second antenna is a off-center fed halfwave on 80 meters with the
center elevated 30 feet and each end at about 15 feet. It's fed about
25% from one end with 500 ohm open wire feeder; the feedpoint chosen
for convenience rather than for electrical reasons. The antenna will be
two half wave out of phase on 40 but simulations show the null depths
are not more than 6 db or so.

The horizontal wire has only been up a couple of months now but the
relative behavior of the two antennas is generally pretty consistent and
summarized for 40 & 80 meters as follows:

The horizontal is two S-units stronger for distances less than 800 miles.

The vertical is almost always noisier but there have been exceptions.

The vertical is superior past 1500 miles on 40 but has a problem with
the 80 m loading coil which makes it intermittent on 80 but superior
when it's working.

The vertical generates slightly more TVI/RFI but they have both been tamed.
The vertical is located very close to the Television feedline and causes
considerable trouble on 20 meters.

The horizontal causes telephone interference with the next door neighbor
when running a kilowatt. The telephone drop is parallel to the antenna
and only about 40 feet away. No complaints yet with 100 watts or lower.
Good chance a ferrite bead will do the trick.

Since i'm mostly interested in local contacts at distances less than
1000 miles or so, I would take the horizontal antenna if I could only
have one. I strongly recommend multiple antennas with provisions

for rapidly switching between them for comparison. In several cases, when working intermediate distances, I was able to make the difference between a successful QSO by switching back and forth between the antennas.

Next i'm considering either a second vertical for a phased array setup or maybe a W8JK style beam tweaked to get decent a decent front to back. I'm living on the west coast and figure it makes sense to have a broad null towards the pacific, at least most of the time. I think it could significantly reduce local noise which is my biggest problem.

Have fun.

I am not sure if there is a specific regulation regarding it, but there
are several points to consider. First, the time and frequency is published
and well known. If you want to avoid interference, then you should not
be on those designated frequencies at those times. Second, if someone
is occupying the frequency, how are all of us who want to hear the
bulletines or code practice sessions supposed to find them if they are
forced to look for a clear spot every time on all of the bands? The
bulletins are automated so they will happen at the designated time and
frequency without operator intervention. If they did not, then we would
probably never be able to find them.

>73...Jim N2VNO

W1AW transmits on many frequencies simultaneously.
The purpose of being on specific frequencies is so those who listen for
W1AW to know where to find the signal.
No one has a _right_ to a frequency. Specifically, if you are in a QSO
you have no more right to that frequency than does a person who wants to
start a QSO on the same frequncy.
It is a matter of courtesy, not of rights.
W1AW offers a service to Amateur Radio operators and prospective Amateur
Radio operators. W1AW's frequencies and times are well publicized. If
anyone is bothered by the code and bulletin transmissions, then theat
person can change frequency by a couple of kilocycles.

From: turner@safety.ics.uci.edu
Message-ID: <38bgpb$d27@safety.ics.uci.edu>
Source record: 258206

Just a note. There are many who detest the Century Club because
it is mainly an exchange of signal reports, and very little else
during the basic net. It can be boring - unless you are interested
in the nuances of propogation (you soon learn all about various
types of propogation from all the various areas around by the signal
characteristics you hear) - in getting the WAS award or many of the
other awards offered.

I found the net very helpful when working for QRP SSB WAS on 40 meters.
Took only about 2 months. Many states are out there each night, and
the LISTEN for you. It is great to notice how they can dig your signal
out of the mud at times.

I have enjoyed the net. The HHH net up on 7235, at 0700, is similar,
and also has more DX checkins - if you are a nightowl :-).

BULLETIN 349 OPS: Is it true what they say?
Release Date: October 24, l994

Question: Is it true, as some publications say, that
"....RACES operation is authorized by the FCC at the request of a
state or federal official, and this operation is strictly limited
to official civil preparedness activity in the event of an
emergency communications situation." ?

Response. No. Neither state or federal officials request
the FCC to authorize the use of the RACES; and the operation is
not so limited as implied.

RACES operation is authorized any time activation is
requested by the local or state official with that authority as
specified in the jurisdiction's RACES plan.

The FCC regulations authorize the RACES as a service for
state and local government, but beyond that no other action is
required. RACES is for their needs, and they determine its use
and need, not the FCC or FEMA. They do not request that the FCC
authorize its use. The only time that a local or state request
might be made to the FCC is in the very isolated instance asking
for a declaration to RESTRICT AMATEURS FROM NORMAL OPERATIONS
during a specific emergency. This is so rare that the FCC
routinely turns down the sporadic requests.

As to being "limited to official civil preparedness
activity....", such statements seem to echo words in Part
97.407(e) and do convey the idea that RACES activities are much
more limited that some other service supposedly without
limitation. However, in the real world, a government emergency
communications unit can do most activities any other unit can do

if (repeat IF) so authorized and properly handled, by its sponsoring government civil defense agency for training and familiarization purposes in preparation for emergency communications. The key is how the situation is handled and structured. For more information on how RACES units do utilize the broad flexibility they possess it is suggested that you review the bulletins issued over the past year or so.

Remember, however, that the RACES prime mission is emergency Public Safety Communications support for and on behalf of the local or state government civil defense program. In today's world that includes many activities that do not involve operation on Amateur Radio frequencies.

Cary Mangum, W6WWW, LL.B., JD.,
California OES Chief State Radio Officer
EOM.

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

GJ>I've been trying to find out what the "spec" cutoff frequency is for
GJ>NBFM de-emphasis. I've browsed through a few books, but they only
GJ>mention WBFM de-emphasis.

GJ>Thanks,

Greetings Gerald:

I have a couple of old ARRL publications that indicate a 75 usec
pre/de-emphasis curve is recommended for NBFM. My REFERENCE DATA FOR
RADIO ENGINEERS manual by ITT shows a curve for a 75 uSec de-emphasis
network. It starts to roll off at about 800 Hz, it is about 3 dB down at
2 KHz, 7dB at 4 KHz, 14 dB at 10 KHz and 20 dB down at 20 KHz. The ARRL
FM and Repeater Handbook shows a de-emphasis circuit made from a 75 KOhm
resistor feeding a shunt capacitor of 0.01 uF. This circuit assumes a
low source impedance and a high load impedance.

I hope this information is useful.

****

This is a catch, of course. But consider the area covered by transmitting
on the input vs. the area covered by the repeater on the output.

TOM SUNMAN (tomsunman@aol.com) wrote:
: I am almost ready to take my Technician class exams. I am currently
: trying to determine which HT to buy. Today I was shown a Kenwood TH-22AT.
: From what I was told and from what I could see it seems like a really nice
: HT. I would please like more experienced opinions on this HT. I was
: considering the HTX-202 but it seems the Kenwood is a better HT. All
: opinions appreciated in e-mail or on this newsgroup. The price on the
: Kenwood is nice as well.

I purchased the HTX-202, and returned it to pick up the TH-22. I have
been very happy with the 22. The signal reports I have gotten with the
22 are just as good as the ones from the 202, and I have not noticed an
appreciable increase in intermod even in RF rich San Diego. If you have
compared the two units, I am sure you are aware of the differences in
features (more memories, wider RX). The size is a definite advantage as
well. Kenwood was very prompt (two weeks) in returning my rebate check.
There is also a much wider range of accessories available, and they are
of higher quality.

The one disadvantage is that to charge the supplied nicad battery the
charger plugs into the radio. There is a standalone charger available
for c.$80. I suggest buying an alkaline battery pack as a backup.

I have an extended TX mod if you are interested in such things, and I
have not seen an extended RX mod anywhere.

Happy Hamming,

Doug

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 OCTOBER AND FORECAST FOR 23 OCTOBER - 25 OCTOBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 86/29

GOES satellite data for 21 Oct
Daily Proton Fluence >1 MeV: 8.1E+06
Daily Proton Fluence >10 MeV: 4.7E+04
Daily Electron Fluence >2 MeV: 2.7E+06 (normal)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Oct 24 Oct 25 Oct
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Oct: 86/29

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 21 Oct
Learmonth 17 3234 4333
Fredericksburg 13 1
Planetary 15 2

Observed Kp for 21 Oct: 2000 0111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Oct 25 Unsettled to active
24 Oct 10 Active
25 Oct 10 Unsettled
COMMENT: IPS Geomagnetic Warning 7 was issued on 22 October and is
current for interval 22-24 October. A shock of approx. 50nT was
observed in the field at approx 1215UT.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Oct normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Oct fair poor poor
24 Oct normal normal fair
25 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
22 Oct 37 near predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
23 Oct 10 About 15% below predicted monthly values
24 Oct 20 Near predicted monthly values
25 Oct 30 Near predicted monthly values
COMMENT: IPS HF Communications Warning 6 was issued on 22 October and
is current for interval 22-24 October. Degraded HF comms on 23rd due
to flare induced geomagnetic activity. Nothern Australian communicators
should continue to use the monthly index as level of activity is not severe.

1157. Re: Callsign server

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-23 00:29:10 UTC
From: ab351@FreeNet.Carleton.CA
Message-ID: <Cy3o0M.IMC@freenet.carleton.ca>
Source record: 258220

In a previous article, morawski@starbase.starbase.mitre.org (Paul Morawski) says:

>I've tried the callsign server at qsl-info@aug3.augsburg.edu several
>times with a known call (mine!) and it comes back with "callsign not
>found". I also tried with "G5RV" and obtained the same result.
>
>Tips anyone?
>
>Paul Morawski, AA3DD
>morawski@ai.mitre.org
>

This server is not intended to be a replacement for either the
international or the domestic Callbook (the U.S. and Canadian
callbooks are online at Buffalo anyway). I believe the intent
is to list QSL managers and QSL addresses for DXpeditions,
special callsigns, etc. I've had good luck with it finding
addresses for contest expeditions, for example, but I wouldn't
expect to find "normal" ham calls listed there.

In rec.radio.amateur.misc Bob Stanton writes:

> What is the best way to do it? I want the HF privileges. I am
>willing to work for them. I just hit a wall every time I try to force
>myself to do something I hate. I know that some who read this will just
>flame me. I have faith that some will have good advice and will be
>willing to share it with me.

My wife started attending amateur radio classes offerred by the local
club last March. In April I got interested in doing it too, and
between then and this month My 13 yr old and I both reached 20.
My 11 yr old missed 13 by one question, but is still working on it,
and the 8 yr old and my wife have both hit 5 and are working towards
13 for November's VE exam.

However what worked for us may not work at all for you.

I got a couple of programs off the internet and modified them to work
like I wanted on my home computer (a SUN workstation running UNIX).

I use the morse program I got off the air to control the generation
of morse code at the proper rate (using Farnsworth), but I generate
several different kinds of code sessions using other programs:

1) random dictionary words.

2) dictionary words from a specified subset of the alphabet.

3) QSOs similar to what actually shows up on the exam.

1 and 2 were most useful for learning the code, 3 for studying for
the exam. 2 is particularly useful where you get several letters
confused.

I find it takes a lot of concentration. *Your* biggest short-coming
is getting a positive attitude, as you admit.

5 WPM is pretty much just memorization of the code (but be sure to
memorize by listening to it, not reading it). One of the best ways to
learn is to practice by sending -- e.g. street signs as you drive
along (the pressure to send the whole line before you reach it drives
your speed up).

There is a barrier around 10WPM where you have to start getting
your ears connected to your hand rather than translating with
your brain. Once you cross that threshold, then 13 isn't too hard.

Going to 20 is mostly just concentration and practice.

It is imperative to practice 2-3 times a day (I had my 13 yr old
son do 2-3 5-minute QSOs at each session when working 13->20).
Practice several WPM higher than you can actually copy for some
of your QSO's. Skip a session every couple of days -- it somehow
helps.

When you take the exam, there are lots of useful things to know.

1) some VEs give multiple choice code exams, which are much
easier than filling in the blanks

2) you can pass 'on string' -- meaning a minute of solid copy.
At 5 WPM you sometimes pass just by getting the RST line right:

. UR RST IS 599/599.

Is a minute -- plus (usually) you have two chances to get the numbers
(but practice the possible separators!).

My 8 yr old passed 5 WPM on string by copying correctly:

. I LIVE IN ROCHESTER, MINNESOTA.

All tests I have heard repeat the callsigns at the end. Copy them
over the callsigns at the beginning, and then rewrite them at the
proper place at the end after the QSO is over.

Some people can copy in their head and just take notes on the
important things. I cannot do this, but am working on it because
I would like to get way beyond 20. Others can also tell you about
copy-behind, but this was unnecessary for my son and I to get to 20,
and completely unnecessary at 13.

My wife thought that she would *never* get the code, but passed on
string at the same time my 8 yr old did, and is now working towards 13.

Personally I think that the code is worth learning.
I think the DX contacts are more interesting, and I think the barrier
it raises will keep ham radio from being ruined like CB was -- while
at the same time being a more egalitarian hurtle than theory (with
no study I came within 1 question of passing the Green Monster my
first try -- based solely on my 15 yr old undergraduate studies).
Anybody can learn the code, just like learning to type or play the piano
(adequately). It just takes practice and the conviction that you can
do it.

When I had my first ticket over 20 years ago, code kept me from making
the upgrade to General and so it lapsed after two years. (I got stuck
at about 10 WPM). The difference this time around was better tools and
a lot more dilligence.

Good luck to you.

Hi all,
I just a bought a used HyGain TH3JRS tribander in pieces and with no instructions! If there is anyone out there who could perhaps e-mail me the assembly dimensions I would be eternally grateful.
I want to get this antenna up as soon as possible before it gets REALLY cold (It's only around 10 degrees F now).

Thanks in advance,
John - VE8EV

From: singho@aol.com
Message-ID: <38cjlh$lqq@newsbf01.news.aol.com>
Source record: 258130

Just wanted to pass on the ARRL BBS number its: 203-666-0578
and to also recomend a new program for ham radio repeater frequencies,
it's a Windows program for repeater frequencies, it's set up like the ARRL
directory as far as data fields, real well done, check it out! (It's on
the ARRL BBS in the General Intrest Files section (I think). The file
name is RBASE11.ZIP, I think it's also on Compuserve, and it's on AOL in
the Ham Radio Files Section in the MS-DOS file library.

1163. This Week in Amateur Radio - In band audio bulletin service Edition 82

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-23 03:04:54 UTC
From: kxkvi@delphi.com
Message-ID: <xC+2ihG.kxkvi@delphi.com>
Source record: 258225

Here is a summary of news items covered on Edition #82 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 28-Oct:

1. FCC Declares Communications Emergency in Texas, Net Frequencies Listed
2. Astronomers Watch Trajectory of Comet Machholtz-2 Entering Earth Orbit
3. TAPR Announces Annual Meeting for March 1995 in St. Louis
4. FAA and FCC Review Tower Marking and Lighting Specs, Responsibility
5. Weekly Propagation Forecast with George Bowen, N2LQS
6. AMSAT Holds Annual Meeting in Orlando, Phase 3-D Satellite Progresses
7. "EZSATS" with Dave Mullenix, N9LTD
8. Upcoming Special Event Stations
9. "Amateur Radio Newsline" - Edition #897 from Los Angeles
10. FCC Kansas City and Anchorage Offices Respond to Interference Problems
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. "The RAIN Dial-up" from Chicago
13. "Are Non-ham Related Packet Bulletins Legal?" - Next Week with KM6PX

Aquisition and retransmission costs for "Newsline" were provided by the Stoddard family and members of the KF9MP repeater system, of North Webster, Indiana.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a non-profit, charitable, tax-exempt foundation based in Albany, New York. The program is carried on the "Omega Radio Network" each Saturday at 7:30 PM (EDT) on the Galaxy III commercial communications satellite, transponder 17 (9H), 5.8 MHz wideband audio (4.040 GHz), located at 93.5 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665. You may also reach N2LQS or WA3RKB via amateur packet @ WA2UMX.#ENY.NY.USA.NA and on various landline bulletin board services.

The following is a QST

The Lambda Amateur Radio Club settles its discrimination
complaint against the ARRL out of court, a Los Angeles suburb
opens its heart to Amateur Radio and actor Marlon Brando says
"yes" he is a ham radio operator. All this and more on Newsline
report number 897 coming your way right now!

(*****
LARC AND ARRL SETTLE DISCRIMINATION CLAIM

The American Radio Relay League and the Lambda Amateur Radio
Club seem to have reached a resolution of LARC's discrimination
complaint against the league. A complaint filed before the State
of Connecticut Commission on Human Rights and Opportunities in
March 1992.
By way of background, back in September of 1985, LARC submitted
a classified advertisement for publication in the "Club and
Hamfests" section of QST magazine. The ad read -- and we quote --
"the Lambda Net club for gay hams with members nationwide and

Canada. On-air skeds and newsletter. For info write Jim, KK3K, at P.O.Box 24810, Philadelphia, PA 19130" -- end quote --.
The advertisement was published in the November, 1985 issue of QST, but was refused in subsequent issues. Lambda submitted the advertisement in 1987, 1989, and 1991. Each time QST refused it. As a result, Lambda filed the complaint before the Connecticut Commission on Human Rights. The complaint asserted that the sexual orientation of Lambda members was the reason for the refusal to publish the advertisement. Lambda also said that QST's refusal to publish the advertisement constituted discrimination based on sexual orientation.
The ARRL still disputes the allegations in the complaint but in February 1994, the Human Rights Commission found that -- and again we quote -- "reasonable cause for believing that a discriminatory practice had been committed."
The Commission then scheduled the case for a hearing but to date none was ever held. Instead, the ARRL and Lambda held a meeting at which time they reached what both term as a mutually acceptable solution to Lambda's discrimination complaint.
Both organizations say that the matter is now settled. They have also issued a joint statement that indicates that the ARRL and Lambda have resolved this situation in -- quote -- "a spirit of good will and mutual respect which will allow each organization to cooperate as they concentrate their efforts on the many challenges confronting ham radio today."

MCI FRAUD

The U.S. Secret Service has broken a huge international telephone fraud ring allegedly involving an employee of MCI. Federal investigators have arrested Ivey J. Lay, of Charlotte, North Carolina. Lay is accused of stealing more than 100,000 telephone calling card numbers using a high tech approach. The ring is accused of running up more than $50,000,000 worth of long distance calls.
This is one of the biggest fraud cases ever to hit the telecommunications industry. Ivey Lay's arrest and that of five alleged co-conspirators follows a 4 1/2 month investigation by the Secret Service. Agents say the ring operated out of five U.S. cities and in Spain and Germany. Lay was a switch engineer for MCI and allegedly acted as the main supplier of stolen numbers. Authorities say ring members used a high tech method to steal calling card numbers. Instead of computer hacking or watching customers enter their numbers. Lay allegedly designed computer software to divert and hold calling card numbers from carriers running through MCI's telephone switching equipment. Those numbers were then sold to computer hackers in the U.S. and in Europe. The numbers' new owners then sold them to Europeans who would later use them to call numbers in the U.S. for free. On October 6th, Secret Service agents seized computer disks

containing thousands of calling card numbers. MCI fired Lay immediately after his arrest. If convicted, he could serve 10 years in prison.
The ring had plenty of victims, tens of thousands of customers of MCI, AT&T, Sprint and other local companies had their numbers stolen. Officials with those companies say people whose numbers were stolen won't be charged for the fraudulent calls. The Secret Service says that among computer hackers Lay is known as "Nightshadow."

(*****
TELEPHONES SUSCEPTIBLE TO RADIO INTERFERENCE

Talking about telephones, the FCC says it now receives 25,000 telephone interference complaints per year and ham radio is one of the primary culprits. According to a news release from the Field Operations Bureau this is the results found as a result of testing 241 residential telephones, selected from field office complaint files.
The study showed that 68% of the transmitting stations most likely involved in the interference complaints were citizens band, broadcast, and amateurs. Citizens band stations accounted for half the interference and broadcast and amateur stations accounted for the other half.
During the study, FCC investigators tested two telephone models claimed by their manufactures to be interference proof. In virtually all cases, replacement of the telephones receiving interference with the one of these two interference free models solved the problem. The addition of external filters provided satisfactory results in only one third of the cases.

(*****
GLENDALE CALIFORNIA WANTS HAMS

The city of Glendale, California, a suburb of Los Angeles, is looking for ham radio operators and anyone else with specialized skills that can be used in the aftermath of another serious earthquake. Gerald Shamburg of Glendale's Office of Emergency Services says that the city wants to establish a pool of volunteers that could help us handle any future situations. Shamburg says that the idea is to keep much of the city's services going as is possible. This, through a cooperative effort involving the city, the fire and police departments, several relief organizations and a coalition known as Citizens for Law and Order.
Even before Mayor Eileen Givens and other officials helped launch the program about 20 people had signed up including several translators and a retired surgeon. Emergency Services Director Shamburg notes that if there is another large quake or other disaster, Glendale will need help with such things as shelter, care, communications and other disaster-related services.

"We need people that can provide translation services and licensed amateur radio operators to handle communications" says Shamburg adding: "People don't really need to have any emergency experience at all to volunteer."

(*****
BRANDO A HAM

Actor Marlon Brando is a ham. For years it has been rumored that the academy award winner was also a licensed radio amateur, but it was not until Brando was interviewed by CNN's Larry King on October the 7th that the world knew for sure.
Brando said that he was an Amateur Radio operator and the thing he like most about the hobby was the anonymity that it offers. He also said that he was in the process of updating his license. The actor was very supportive of Amateur Radio but stopped short of revealing his own call sign.
Modern communications appears to be an important part of Brando's life. He told King that he sees the new international information superhighway as coming to us quickly. Brando adds that he is already a part of it through his participation in America Online, but not under his real name.

(*****
ITAMSAT BACK ON

The ITAMSAT ham satellite has been switched on by ground command after forty days in hibernation. A full spacecraft check out was performed by the control team and IO-26 was in excellent shape. It's battery is fully charged and the critical parameters in nominal status. A couple of test software were also loaded and executed without any problem.
The reason for the long silence is due to the heavy workload of the control team and a lightning that destroyed the main command station. The reload of the internal housekeeping computers code with improved capabilities is scheduled to celebrate the first year in orbit.

(*****
WGN ON THE BIRD

For those of you who like to listen to WGN Radio from Chicago, you can hear it on Anik E1 Ch 2 at 5.22 Audio. Also, the World Radio Network can now be heard on Galaxy 5 Ch 6 6.8 Audio. This is a good audio service to get news from around the world. The net also carries Jonathan Marks, G8WGN's Media Network program from Radio Netherlands.

(*****
SuperLink

If you live in the mid-western United States and are interested in working Canada on VHF FM please contact Paul Emeott, K0LAV.

According to an ALL US packet posting, his Superlink repeater system links two meter repeaters into Wisconsin through Minnesota, North Dakota and North to Winnipeg, Canada.
The SuperLink system utilizes a 440 MHz backbone. East and South Superlink repeater systems are in the works now. Plans are also in the works to interconnect Superlink with the Seattle Washington based Evergreen Intertie Network shortly.

(*****

DX

In DX, word that DL3KDV, will be traveling through the Caribbean and will be active from J6, J8 and J7 from mid-November through December 12th. Dieter will be operating on CW, SSB and RTTY on 160 through 10 meters. QSL as he suggests.

(*****
HAM SONGS

Finally, ham radio is a hobby that seems to have something to offer everyone. Get a license and you might talk to anyone from a hollywood star to an astronaut in space, and maybe even to a king. On the air you might even run into one of the many well known country and western recording artists like Chet Atkins WA4CZD, Ronnie Milsap WB4KCG or Andrew Huddleston G3WZZ.
What was that last name and callsign you say? Andrew Huddleston G3WZZ? Never heard of him? If you haven't already, you will.
You see, Andrew Huddleston and his wife Lissa Ladefoged are the brains and the sound behind a new album of songs written especially for and about radio amateurs. And why an album for hams? G3WZZ says it's all in keeping with the spirit of country:

"To tell you the truth because there are a couple of really funny dramatic stories which I thought were great to write a song about. The problem is in our regular gigs which we do all around Europe, Australia and New Zealand, you can't get up on stage and sing a song about CQ and about morse code and about that kind of thing. About problems with the wife because your always on the air. So we had to make a whole CD which is only for ham radio enthusiasts." Andrew Huddleston G3WZZ.

Andrew and Lissa are not newcomers to the country music scene. With seven previous albums behind them, they are popular artists worldwide. Andrew tells Newsline that he and Lissa enjoyed putting the album together. And for an encore?

"Well we have been thinking about doing a video version called Seek You, The Movie, because it is the whole CD is actually, it tells a whole story about one little amateur radio family. And it would be great to make the movie. But it depends how many people out there think the idea is interesting." G3WZZ

Well the FCC rules say that we can't play any of the album cuts
on your repeater. But we can tell you that hams who have heard it
say that Andrew and Lissa may have a ham radio hit on their hands.
Our favorites are the songs titled Always on the Air, On the
Monday Evening Gray Line, It's Great to QSO in Morse Again and Out
In To The Wild Blue Yonder. This last one is a tribute to those
hardy souls who like to travel to remote places and put them on
the air.
The name of the album is Seek You -- that's SEEK YOU. Kind
of a play on words. Information on getting a copy can be found in
the latest issues of CQ and QST magazines.

>>willing to share it with me.

>I find it takes a lot of concentration. *Your* biggest short-coming
>is getting a positive attitude, as you admit.

Yeah. Approach Code not as something you *have* to do because of a
government mandate that's arcane and out of date, but as something
you *want* to do because you want to use Code. That changes learning
it from drudgery to fun.

>There is a barrier around 10WPM where you have to start getting
>your ears connected to your hand rather than translating with
>your brain. Once you cross that threshold, then 13 isn't too hard.

That's true too. The best way to avoid this hump is to start out
going directly from ear to hand by operant conditioning. Code
shouldn't be something you have to think about. It should be
something you just *do*, like touch typing. Remember when you
were learning to type how they covered the keycaps so your fingers
just had to *know* the right keys rather than letting you look
and reason out which key to hit? Well Code has to be done the
same way. It has to be an automatic reflex response to the
aural stimulus. You shouldn't consciously think about it at
all. Sadly, the only conditioning that works is mindless drill,
drill, drill. You have to keep reminding yourself, "Don't think,
don't think, don't think." That's easier for some than for others.

>Personally I think that the code is worth learning.
>I think the DX contacts are more interesting, and I think the barrier
>it raises will keep ham radio from being ruined like CB was -- while
>at the same time being a more egalitarian hurtle than theory (with
>no study I came within 1 question of passing the Green Monster my
>first try -- based solely on my 15 yr old undergraduate studies).
>Anybody can learn the code, just like learning to type or play the piano
>(adequately). It just takes practice and the conviction that you can
>do it.

Ob flame. I disagree with everthing you say here except the first
sentence. I don't think Morse is a lid filter, and I don't think

it's more egalitarian than theory. Anyone with the intellectual capacity to be an amateur can learn the theory, though depending on their previous educational background, they may have to do a bit more or less studying of the prerequisites. OTOH Code requires an innate neuro-muscular coordination that some people possess, and others do not. Put another way, Code responds to inborn talent much more than anything else an amateur may wish to do.

Those with good senses of rhythm and pitch discrimination have a major advantage over those who do not. No amount of effort can overcome that handicap. Like a tone deaf wannabe musician, no matter how much they practice, they will never be a concert pianist, or a rock drummer, or in some (somewhat rare) cases even a traditional musician at all. But they can still "make music" using a computer driven synthesizer. They may even understand enough music theory to make very good music with their rhythm enhancing tool. Or perhaps they are very good at reciting spoken poetry instead of singing it as a lyric. It's improper to bar them from the stage simply because their performance choices are different.

Congratulations: I just received my call --KE4RRG-- on 9-22 after 5 weeks/5 day That is took exam 9-12...eff date 10-14...received 10-22. This is better than the 8-10 weeks or more i've been reading about...But have seen a couple of other 5-6 week stories so things at FCC apparently are getting faster...or it's just a good time of year to do business with them. Anyway, take care...& good luck on the upgrades. I'm trying to do the same thing, (but with a little longer timeframe).

Bear in mind that what is being discussed are one-way bulletins. In
legitimate discussion, the FCC has very little power to regulate anything. I
think if their power were ever challenged in that regard, that under the
first amendment, it might becomes very difficult to censor anything... :)

That said, IANAL, so maybe I'm full of crap. :)

A friend of mine is looking for hams that are interested in discussing the radio aspect of packet radio. i.e., tx delays, sythesized radio on packet, group delays, etc. He's interested in putting the radio back into packet radio.

If you are interested in the radio side of the hobby and not just BBS forwarding, and running packet dx clusters, bbs, nodes, etc just send him an e-mail or send it to too so I can relay the info.

His packet radio address is VE2BMQ@VE2FKB, his name is Burt. He'S built a digital regen repeater and installed many nodes on 2m and UHF. You can also try ve2bmq%ve2fkb@bbs.ve2ums.ampr.org on the internet.
IF you could also send me a copy in case the other 2 methods don't work.

thanks Dino

Ohio/Penn DX Bulletin No. 180

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 180 (InterNet Version)
BID: $OPDX.180
October 24, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, K4CEF & Southeastern Cluster Group, AD1C, WB2K, WB2DND, N3SL, K3ZO, KD4HXT, WB4IUX, N4VZ, KG4TM, N5OK, K8PYD, CO2KK, CO2OJ, EY8MM, AH0W/OH2LVG and W6PQS, WAPJR, W2JGR of the IRDXA for the following DX information.

160 METERS. Arnie, CO2KK, states he is now ready for the 160 meters DX season, using a 50 watt rig and rooftop inverted L antenna (55 meters overall length), working against a counterpoise. Those interested in skeds may write to his InterNet address, acoro@tinored.cu, or may call him on the phone at 53-7-293738. QSL to his home address: Prof. Arnaldo Coro Antich, Ave 23 No. 3413 Altos, Entre 34 y 36, Playa, Ciudad Habana, Cuba 11300 or use is PO Box Number: Arnaldo Coro, PO Box 6060, Habana Cuba 10600.

80 METERS. Every day, from the middle of October, a group of Asian operators (EX0V, EY8MM, UN7VV, AP2SD, UK's and EZ's) are looking for NA West Coast stations on 3795 MHz between 1200 and 1400z. They use directional antennas listening long path.

A6, U.A.E. Don, WB2DND, will be visiting Dubai from November 11-16th. Look for him on 20 meters at 1300z on either 14025 or 14090 (RTTY). Also, he will concentrate on 80/160 meters each morning at 0200z. On 14240 kHz at 2100z, he has a sked with his father and son each day and he will take callers after their QSO.

BV, TAIWAN. WB4IUX reports he has been asked to visit organizations of his company in Japan and Taiwan to make some presentations and carry out some training. The final approval for the trip should be received next week. He will be in Taiwan either during the November 7/8/9 or November 16/17/18 timeframe, and is working feverishly on getting permission to operate. If he can secure this permission, he plans to operate almost solely on 80 and 40 meters to give those low band operators a chance

for BV. The low end of 40 meters in SE Asia is a mess, so it isn't easy to find a clear frequency. His plan is to be in the 7008-7012 and 3508-3512 windows. He promises more info as it develops particularly in reference to the exact dates and the station from which he will be operating.

CO9, CAYO CAGUAMA, CUBA. A group of hams from Cuba and Portugal will activate CO9OTA in the archipelago Jardines de la Reina between November 7-9th. (ed. An IOTA number is not available at this time because we believe that this may be a new IOTA number.)

EY NEWS (TAJIKISTAN). Nodir, EY8MM, plans to take part in CQWW SSB Contest as a Single Op/Multi bands entry using his home callsign. He will pay special attention to 160/80/40 meters and will be the only station from Tajikistan in this contest. QSL for EY8MM via DL8WN.
Nodir mentions he and others will also plan to be active during CQ WW CW Contest as EY3A. The team will consist of EY8MM, WW, QX, CQ, JX and UA3AB. They may operate as M/M or M/S.
During the month of November, the special callsign EY70D will be used to celebrate 70th aniversary of Dushanbe City. QSL via DL8WN.

GUANTANAMO BAY COFFEE CUP. As we mentioned in last's weeks bulletin (OPDX.179), Jeff, WI2T, will be active in the CQWW SSB Contest as a Single Op (work sked permitting) signing KG4JO. A coffe cup from KG4 is being offered to those stations that work KG4JO on all six bands during the CQWW phone contest. The cups will be sent out in time for Christmas to the callbook address of the station.

HS, THAILAND. Fred, K3ZO/HS0ZAR, has just returned from HS-land to report that the members of the Radio Amateur Society of Thailand are busy planning major efforts in the CQWW SSB and CW contests. Look for HS7AS and HS0AC in the contests. Meanwhile, the station at the Asian Institute of Technology, E20AT (formerly HS0A), is being refurbished with a full-sized 2-element yagi for 40 meters. Fred also reports many more Thais have now received permission to set their stations up at home and you will begin to see more activity from these stations on HF. There are presently 460 citizens of Thailand who hold licenses which give them persmission to operate on the HF bands. This is 460 out of a total of some 95,000 licensees altogether, the vast majority of them being VHF no-code licensees. The ham population has increased enough so that the Thais are able to support a net on 40 meters. It is on SSB, meets at 1300z on 7060 kHz. A CW net has also been started at 1400Z on 7015 kHz. Zone 26 should become very available in the upcoming year.

HZ, SAUDI ARABIA. Terry, N4KT will be active in the CQWW SSB Contest operating HZ1AB solo on 3.7 MHz band. Last year he operated 40 meters single band entry, and this year he wants to try 80 meter single band.

IMPORTANT NOTICE. Steve, N3SL, reports that anyone still needing an AH1A QSL card should resubmit now. The Mile Hi DX Association will close the post office box effective February 1, 1995. All unclaimed U.S. and JA QSLs were sent to the respective bureaus nearly a year ago, so check

there first. After February 1st, K1ER and N3SL will have the logs.

IRDXA EQUIPS HF0POL FOR RTTY. The International RTTY DX Association (IRDXA) has donated a Hal RTTY Terminal for use at HF0POL, the Polish Antarctic Expedition Base on King George Islands in the South Shetland Group. The equipment was shipped via air to the supply station in Puenta Arenas, Chile. There it will meet up with the new HF0POL operator, Andy Grotha, SP2GOW, for the supply ship voyage to the base on King George Island. Wald, SP4KM, organized the RTTY effort and trained Andy on the keys. Dxers looking forward to this new one should be aware it may be several months before Andy gets to the base and appears on RTTY. Keep an eye on the VK2SG RTTY DX notes for updates.

KC6, BELAU. Jim, WV5S, and Coy, N5OK, of the Oklahoma DX Association will be returning to Belau (Palau). They may be using their previous calls of KC6SS and KC6OK. Operations will be October 25th to November 2nd and will include activity in the CQWW-SSB Contest. Emphasis will be on CW, WARC, 80/160 meters and with some RTTY activity. QSL via home calls. After their stay in Belau, they will also operate from Yapp, November 2-9th using the calls V63SH and V63OH.

NEW QSL MANAGER. Adam, N7VEW, will now handle cards for 5V7MD, Dave Moody in Togo and Randy, TJ1JR in Cameroon. Adam has announced the following skeds: Wednesdays, 2230z on 14165 kHz with TJ1JR and Thursdays, 2200z on 14165 kHz with 5V7MD. After the sked, usually 5V7MD or TJ1JR will stick around or move up the band to work some stations. QSL TJ1JR or 5V7MD, to N7VEW 1994 CBA or Adam J. Boettiger, 6911 Naches Heights Rd., Yakima, WA 98908 with an SASE. Please no bureau cards. Both stations are missionaries and will be there for a few years.

QSL BUREAU (8th Area) SLOWING DOWN! Leo Fry, K8PYD, Manager of 8th Area QSL Bureua, informs OPDX that processing of cards are down in the 8th Area, as well in other bureaus. Leo says, "Our incoming work load a year ago was an average of 50 lbs. a week. Sometimes it was as high as 100 lbs. a week. Now, since last December, it has been 5 lbs. a week. That is a 90% cut! Out of that, at least 50% goes to DX QSL Managers leaving only 5% of the original load of a year ago for the remainder of the hams. The active DXers are not aware of this and they continually call and inquire where their cards are." (ed. "SEND DIRECT" is becoming common place on the bands by DX stations. WHY? Good question! The bureau system was set in place to help lower the cost of "SENDING DIRECT" to both sides of a QSL exchange. For a new DXer it has become very expensive to QSL as the price of postage continues to rise. Usually the only stations that asked for direct cards were major DXpeditions. It would be a shame if this system is beginning to break down because there are a lot of individuals (on their own free time) who are involved in the sorting and distributing of cards.)

QSL CORRECTION. The QSL information for the upcoming DXpedition to Revillagigedos, XF4M, is: AA6BB, Gerald D. Branson, 93787 Dorsey Lane Junction City, OR. 97448. (Not JH1AST as reported earlier.)

SU, EGYPT. There have been reports that SU2MT will be active in both CQWW SSB & CW as a Multi/Single entry. Meanwhile, look for him on 15 meters around 1200z or 20 meters between 1700 and 2000z.

ST0, SOUTHERN SUDAN. John, PA3CXC, is once again active as PA3CXC/ST0. This trip it seems that he is concentrating mostly on CW, the WARC bands and 40 meters (few spots on 15 meters). Check around 18075 kHz between 1800 and 2200z, 7005 kHz around 0315z and 21020 kHz after 2200z. His length of stay is unknown at this time. QSL via his homecall.

TI9, COCOS ISLANDS. TI9JJP is now active. Activity seems to have started on October 22nd. The length of this operation will last until the 29th. Check 14195 kHz and the usual DX frequencies.

TK, CORSICA. DL6RAI, DL5MAE, DL5MFF, DJ0MBU and DF4RD will be visiting TK5EL to be active in the upcoming CQWW DX SSB Contest as a Multi/Sinlge entry. They will try to be active before the contest (24th of October) using their own TK/callsigns (e.g. TK/DL6RAI, etc.).

VP2E, ANGUILLA. K1DG and KA1XN will operate during CQWW SSB as a Multi/Single entry (No callsigns were mentioned). After the contest, look for FS/K1DG and/or PJ7/K1DG for a few days on various bands and modes.

VP5, TURKS & CAICOS ISLANDS. A group from the North Florida DX Association (NFDXA) will be traveling to VP5 for the CQWW phone contest. The group last year, as a Multi/Multi entry, took 3rd place in the world. This year they plan to operate as Multi/Single using the callsign VP5Y.

XX9, MACAO. G3SXW and G3TXF have been active on the air as XX9SXW and XX9TXF. Activity has been mainly on CW only all bands including the WARC bands. They will be active until October 27th.

YI, IRAQ. Robert, N4VZ, in a QSO with YI9CW, found out that the YI station's current license does not authorize him to use 30 meters. YI9CW states that he has applied for the authorization and that he is hoping he will receive it at the first of the year.

ZONE 2. John/WB2K and Davis/WJ2O are venturing up to the great white north to ensure Zone 2 will be LOUDLY heard in CQWW SSB this year!!! They will be operating 2 separate Single-Op stations from locations about 20 miles apart, high power, beams, and below freezing temps! WB2K will be signing VE2TJA and WJ2O will be signing WJ2O/VE2. QSL via their home calls. John says, "Work us...A LOT!!! Help us stay awake (and warm!). Zone 2 snowballs for anyone that works us on 6 bands."

SPECIAL NOTE FROM EDITOR. The will not be a bulletin next week (October 31st). Please continue to send your DX information.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS

online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

1178. Emergency Nets

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-23 21:38:30 UTC
From: gt7102d@prism.gatech.edu
Message-ID: <38el4m$ltr@acmez.gatech.edu>
Source record: 258103
Cross-posted to: git.radio.amateur,rec.radio.amateur.misc

This is to inform you of the emergency net service every Wednesday at 2100. Since Atlanta does not have any emergency-type net, this will be an excellent opportunity to do some amateur radio-related public service. We will cover weather spotting, liaison work, relaying, and several other characteristics.

For those of you who hold a license who think that you don't have to do anything once you pass the test - think again. We holdsome of the best usable frequencies in the frequency spectrum, and the American people allow us to use them without buying expensive licenses, having to stay on any particular matters, or use it for our jobs (that's actually illegal!). Public service has separated us from the CBers for decades. So, the least we can do to show our appreciation for our allocation of frequencies is to get involved in an emergency net, weather net, or other public service projects.

Sure, the work might be strenuous and perhaps dangerous, but the self-satisfaction is more than worth it all.

Some of us RTTY types also use SK at the end of a QSO.

But, I guess we do have keys :-) :-). As in "keyboards." Or is
that key-baud? Perhaps it is key-bored?

Bob Wilkins n6fri (rwilkins@ccnet.com) wrote:
: This was found floating on the Amateur Packet BBS system. What do you think?

I think this guy is a weenie with nothing better to do with his life. He should tear up his license and get the hell off the air if he doesn't like it. You have to remember, this is HIS interpretation of the rules. In the bbssig mailing list they posted the copies of the letters from the FCC and you'll see clearly that most of what this guy says is bent out of shape into something that he wants. Funny that anyone that reads the letters from the FCC and also Part 97 will see it differently.

I'm an experimenter and have been licensed for over 15 1/2 years now. I've seen all kinds of people come in and think they own this hobby and they have nothing better to do with their lives but to look for something illegal. If you are looking all the time you'll find something whether it's legal or not. Your mind becomes distorted when you spend all day looking for errors and trying to distort the rules to make it what you are trying to see. The FCC is not some evil government group trying to get rid of ham radio. I've talked to the same person that he has talked to before on the phone and the FCC is very flexible with the rules and ☐{willing to cooperate with us to make them work. If we feel that a rule needs to exist or a clarification of a rule, submit it or talk to them about it. I dont' go around looking for what he does because I grew out of that phase years ago, instead I'm more interested in doing the new and more advanced technology (the stuff that scares the hell out of people like this guy) and if it's not legal or there is a doubt, then I'll try to change it or get a waiver (STA).

On 'amateur radio related' give me a break. If everything in this hobby had to be ham radio related then who would want to be in this hobby. I'd set up shop in the CB band instead along with most other hams. This is communications plain and simple, whether it's CW, SSB, digital modes, ATV, etc... We experiment. I run TCP/IP and if you look at what it does adn it's legal for ham radio, I say it ham radio related. Anything I send through is ham radio related and I can easily bend or distort any rule to prove that too if challenged just like this person is trying to do to prove it is illegal.

Most people like this end up just getting treated badly for trying to wreck the hobby and put more restrictions on it and it ends up just hurting them. I've seen this same thing over and over again and it never seems to stop. Maybe a year or two from now he'll probably end up just changing his callsign and try to start over like other people I know personally that were just like him.

>crap.

Nope. The Code was written by an amateur that was probably a
member of the ARRL.

>-> ONE:
>
>-> support to his fellow radio amateurs, his local club and the American
>-> Radio Relay League, throught which Amateur Radio is represented.
>
>This should tell you the whole story. Talk about having a pointed
>interest. What makes you think, old timer, that you even have to belong
>to the ARRL or a Club to be a real ham. Again, my friend, read the real
>rules in part 97. Then get back to me.

Rather, you should study the history of amateur radio; without
the ARRL lobbying for us over the last 70 or so years we wouldn't
exist today. Surely if you have any interest in this hobby you
wouldn't mind reading a bit about our history, no?

> AND btw, Amateur
>Radio is NOT A HOBBY. Check again and you will note, that NOWHERE does
>it say the Hobby of Amateur Radio, but the SERVICE of Amateur Radio.

From the Oxford English Dictionary:

HOBBY 4. A favourite occupation or topic pursued for amusement; an
individual persuit to which a person is unduly devoted. 1816.

SERVICE 5. A branch of public employment, or a body of public
servants, concerned with some particular work or the supply
of some particular need. 1685.

>Better check before you jump too quickly.

Hey, that's what I was going to say! Anyway, in our daily yaking
on the air most of us feel we're pursuing a hobby; not until
disaster strikes do we consider our hobby a service, as per
Part 97's definition.

On the SSB phone bands, or 2M FM repeaters, you can hear a lot of stuff
not related to ham radio (weather, health problems, cars, name it).
No "business" or "commercial" traffic of course. So, if someone posts
a food article, image files, or a debate on something, is that significantly
different than the voice stuff? One has phone nets,where each ham in it
is talking to multiple reciever hams. On packet, I've recieved many
thank you's from hams after posting several "comet hits Jupiter" image
files. That's a kind of 2 way. I don't think the FCC is that worried
about it. We're not charging money for packet posts, it's just a big
exchange of various kinds of non-commercial information.

I posted a similar question about a Morse program that was SB compatible a few months ago. Then, I happened to read the instruction manual that came with my sound card (a SB clone) and discovered what a certain unused wire that came with the card was for. If you disconnect the computer's internal speaker and run this jumper from the speaker connection on the motherboard to the sound card, *ALL* sound sent to the internal speaker will be routed through the sound card.

I had two reasons for wanting this: 1.) My internal speaker wasn't loud enough to hear; and 2.) I wanted to be able to listen through headphones.

If this is your reason for wanting to use the SB, it's worth a try. It certainly lends credibility to the "RTFM" acronym, too. :) 73 de...

IF>'s wonderin' whether touch tone paging should/shouldn't work via a repeater.
IF>When I try it simplex, I page the other HT and it opens up its squelch,
IF>no problem whatsoever. Same thing doesn't work when going through a
IF>repeater. Would it not work cause the repeater shifts the touch tone
IF>frequencies and they are therefore not recognized by the receiver
IF>expecting the codes. I did indeed wait till the repeater kicked in to
IF>release the three codes, even done it manually ... without success.

I'm certain you know about the input and output of a repeater... So:
Most repeaters have autopatches, and look for DTMF codes to access the
autopatch. So when you key the repeater INPUT and give it DTMF codes, it
doesn't send the DTMF codes to the OUTPUT (otherwise, anyone listening
with a decoder could find the codes..) Hope that explains it..

Call out the thought police. Obviously US amateurs are going to have to
be careful how they think in future.

>3. The Information sent MUST BE RELATED TO, AND OF INTEREST TO
>AMATEUR RADIO OPERATORS ONLY!
>
Well, if you cut out everything that wasn't of interest to *this*
amateur radio operator then there would be about ten bulls per day. If
you then removed those which weren't radio-related it would be down to
one. Looking at the above from another point of view, does the wording
imply that if the information is also of interest to non-amateurs, it is
breaking the rules?

In summary, it looks like this chap may well go down in history as the
person who killed packet radio as a useful mode in the US. Just wait
until he listens to 80M and hears all the non-radio-related ragchewing
on there.

>separation of tones rather than the tones themselves.

Slight correction here: When the tones are send by the land-based
transmitter a carrier is injected - it's as if the tones
are amplitude modulated. If you listen carefully with your receiver
a bit off frequency you'll detect the presence of a carrier just prior
to the start of the tones. Thus for an brief period, the comms shift
to AM - the aircraft's receiver then has no trouble decoding the
2+2 tone format (two tones sent similtaniously followed by two
other tones sent similtaniously; similar to what large county
fire departments use), so that the receiver is actually decoding
four seperate tones, not the difference of pairs of tones.

Just a reminder to you guys that are on IRC... the ham radio channel
is #HamRadio. There is usually a pretty good size group of hams on there
in the evenings. See you there.

BTW: If you are looking for a good server, try irc.colorado.edu, or
irc-2.mit.edu. See you on the channel!

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS (RTTY) News Bulletin 832 23rd October 1994

2nd operator silent

It is with deepest regret we report that XYL, Ruth, second operator to Henry VK8HA, passed away on 14th October following a fall.

We extend deepest sympathy to Henry and family in their loss and hope we speak for all listeners to these broadcasts in this matter.

Rest in peace, Ruth.

DARC Corona 10m Digital Contest, November 6 1994

This contest is sponsored by Deutscher Amateur-Radio-Club e. V. (DARC)

Contest period : Sunday, November 6, from 1100z to 1700z (6 hours).

Note: Contest will take place on the first Sunday of March, July, September, and November of each year.

Modes: RTTY, AMTOR, PACTOR and Clover.

Bands: 10m only

Classes : A - single op; B - multi-op; C - SWL.

Contest call:

for RTTY: "CQ CORONA TEST DE ..."

for AMTOR/PACTOR: use FEC (mode B) for "CQ CORONA TEST de selcall XXXX"

Use ARQ (mode A) for answering and contest exchange. Contest exchange in any other mode is subject to disqualification.

Exchange : USA stations: send RST plus QSO nr plus name plus state.

All others send RST plus QSO nr plus name.

Contacts: Additional QSOs are allowed with same station on different mode after a 15 minute interval, or after a QSO with another station.

Multipliers: Each DXCC/WAE country, and each USA state, and each call district in JA, VE and VK, (NOT USA). Count only the first QSO with a USA stationj as a DXCC/WAE country multiplier.

QSO points: Count 1 (one) point for each completed QSO.

Final score: Total QSOs x total multipliers.

Awards: To top stations in each class, country and district mentioned above.

Logs: Use separate logsheets for each node. Log sheets must contain: Date, Mode, Time UTC, Callsign, message sent/message received, name, USA-state, first-time multiplier preix, and QSO points. Also required is a summary sheet with a list of claimed multipliers. If entry is multi-op, please list names and callsigns of all ops. Comments are very much appreciated.

Deadlines: All logs must be received by 60 days after the Contest. Mail to:

Werner Ludwig, DF5BX
P.O. Box 12 70
D-49110 Georgsmarienhutte
Germany

IPS WEEKLY REPORT
---
14 OCTOBER - 20 OCTOBER

ISSUE No 42

DATE OF ISSUE: 21 OCTOBER 1994

INDICES:

DATE 14 15 16 17 18 19 20

10CM 93 93 91 92 90 91 90
A 7 9 5 4 3 7 (8 ESTIMATED)
T 21 16 18 26 35 35 32

SOLAR ACTIVITY WAS VERY LOW 14TH TO 18TH OCTOBER, MODERATE ON 19TH, AND LOW ON 20TH. THERE WAS AN M3 FLARE ON 19TH.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET 17TH-18TH, AND QUIET TO UNSETTLED OTHERWISE.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED VALUES WITH ENHANCEMENTS OF UP TO 30 PER CENT DURING LOCAL NIGHT ON

18TH-19TH OCTOBER.

FORECAST (21 OCTOBER - 27 OCTOBER)

SOLAR: LOW

GEOMAGNETIC: SHOCK EXPECTED AT 1700 HOURS ON 22ND FROM M3 FLARE. ACTIVE CONDITIONS ON 23RD, THEN QUIET TO UNSETTLED.

IONOSPHERIC: DEGRADED HF COMMS EXPECTED ON 23RD, OTHERWISE NORMAL.

COURTESY OF IPS RADIO AND SPACE SERVICES

We apologise for the lack of the VK2SG RTTY DX Notes this week but they just are not available on any media we have tried -- not even the Internet. Hope to have them for you next week.

In the meantime, here is the

ARLD062 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Bob, W5KNE, Chod, VP2ML, Glenn, W6OTC, Joe, NJ1Q, the Ohio/Penn DX Bulletin, QRZ DX, The DX Bulletin, and the Contest Corral column from the pages of QST. Thanks.

SWAZILAND. Adam, SP2JYX, signs 3DA/SP2JYX and has been on 15 and 20 meters, most of the time on SSB. QSL via CBA.

THAILAND. Reiner, DL2VK, will be here for approximately 6 months. He will be signing HS0/DL2VK and plans to operate primarily CW. Some Packet, AmTOR, PacTOR and SSB may be in the works.

LAOS. Minoru, JA3MNP, should be on the air from the station of XW8KPL as XW3MNP October 20 to 27, including RTTY. QSL via PO Box 59, Kyotonishi 6165, Japan.

CAMBODIA. XU7VK has been on 3506 kHz at around 1316z.

SAUDI ARABIA. Mike, K3UOC, is now working in Riyadh. If plans to obtain a Saudi license fall through, he hopes to be able to operate 7Z1AB, the station at the U.S. Embassy.

NAURU. Teo, DJ1RL, and Harry, DL6NA, should be signing C2/ their call signs by the time this bulletin hits the airwaves. Teo is the CW op and Harry likes SSB. They will concentrate on the lower bands. Try 1827/1832 kHz. QSL via the DARC Bureau or their home calls. The following three entries are their planned itinerary after Nauru operations.

FIJI as 3D2AN and 3D2FT, October 17, 18 and 19.

SOUTH COOK ISLANDS as ZK1/ their home calls, October 19 to 22.

FRENCH POLYNESIA as FO/ their home calls, October 22 to 28.

(The above item quoted in full, although some dates have passed, so you can check your logs. ANARTS Ed.)

SOMALIA. SM7CIP operates T5AR with a barefoot rig and low profile antennas. His QSLs will not be printed until early 1995, so please be patient. QSL via SM0DJZ.

SYRIA. Mike, VE3UWC, is with UN Peace-keeping forces here for about 3 more months. He signs VE3UWC/4U, though little is known of his operating habits other than to try 14220 kHz between 2130 and 2200z.

ETHIOPIA. Listen for ET3BT on the Family Hour Net at 14226.5 kHz around 2300z.

MACAO. Listen for Roger, G3SXW, and Nigel, G3TXF, around October 19 for a week of CW operating. Plans are to emphasize LF and WARC bands.

GUYANA. Listen for Eddie, G0AZT, and Glenn, W6OTC, operating RTTY as 8R1TT. Plans were to be in on the JARTS WW RTTY Contest last weekend. Check 80 through 10 meters since the contest. QSL via Eddie Schneider, POB 5194, Richmond, CA 94805.

ANGUILLA/SINT MAARTEN. Warren, WB1HBB, will be doing some operating while vacationing on these islands. He will sign PJ7/WB1HBB from October 21 through 28. Try 14263 kHz at 1230 and 2100z. QSL his home call.

COCOS ISLAND. TI2JJP should be on as TI9JJP October 20 to 29.

QSL CORRECTION, or please use phonetics. Rick, AA6KS, reports that he is not, repeat not the QSL Manager for ZF8BS. The correct route is via AA6KX.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

>Bob KD4ARD

Well, you apparently have a PC and a portable cassette recorder... What I did was to record my own tapes from the computer. Set up one of the code programs to beep out random words or random letters. These are very difficult to memorize. After half an hour, turn the tape over and record the other side 1 wpm faster. When you can copy 75% on the 1st side, start on the second side. When you copy 75% on that side, re-record the whole tape even faster.

This plus W1AW got me from 7-8 WPM to 15 WPM in about 2 months. I don't think I'm gonna try to use the same method to get to 20 WPM - I want to get on the air.

BTW, I've never seen anyone else mention the above method. It's great if you're not always near a PC.

}Snip.....
}
}> : affects? How can I prove that this is a problem? At least, can I get some
}> : more data to point in this direction? Thanks for the help.
}
}You'll need to borrow a good spectrum analyzer, connect it to the coax
}for the reciever that's having the problem. Then have someone climb
}about halfway up the tower and 'shake it' as hard as possible. Watch the
}analyzer for signals around the receive frequency.
}
While you're at it, use the spectrum analyzer to "look" into the receive
port of the duplexer to see if there is some low level stuff in the notch of
the duplexer on the receive frequency. This is also a way to see if the
repeater's transmitter is the major contributor.

Hello Boy!

> Actually, the way *I* read it, Mike was alluding that Monique may believe
> that she was responsible for the 'hard work' of the contact when, in fact,
> she clearly was not.

Thanks Iain. That's precisely what I meant. I wasn't suggesting that either Monique or I should be working simplex on the repeater input. What I was whinging about was the fact that the repeaters were being abused by base stations who (if they had taken the trouble to listen) might well have found that they could have been working simplex anyway. I wonder how many of those lids will actually get QSL cards from the repeaters?

> On a related matter, does anyone have any circuits or information about a
> device which will shut off all repeaters when the band is open ??

How about a device to shut off repeaters *ALL* the time. Like a well-aimed bazooka?

> Only kidding, folks ...

So was I, honest....

73 all,
Mike

> I fail to see why you should complain if stations want to exchange
> QSL cards to acknowledge an unusual contact made through a repeater.
> They may prize it as much as you do your score tokens.

Try reading the whole of the message Gary, not just the bit you quoted back.

I wasn't suggesting that anybody work simplex on the repeater input.

1/ I was questioning the need to work DX through repeaters, period.

2/ I was questioning the need to work DX through repeaters during the sort of tropo conditions we had in NW Europe last week.

3/ I was questioning the concept of exchanging QSL cards for repeater contacts.

4/ I was questioning the attitude of a base station who hogs a repeater 1/2 mile up the street in order to work DX when mobile stations were trying to work through the repeater.

Most of all, I was replying along the original theme of this thread with the statement that manners on the FM sub-bands here in Europe are probably as bad, if not worse, than had been observed on your side of the pond by the guy who posted the original message.

Hi Gary,

> Sure, nothing wrong with that, but it seemed Mike was complaining
> that the repeater users were preventing him from DXing. That sounds
> like he intended to use the repeater frequency for simplex communications.

Sorry if that's what was inferred by my message. It certainly isn't what I meant. In Europe, repeaters are primarily intended for use by mobile stations. I was mobile, and I wished to have a QSO (mainly to practice my rusty French). I was prevented from doing so by a handful of base station operators working DX through a number of the repeaters on route from London to Paris.

I was irritated by the fact that nobody apparently even thought of checking the input to see if they could QSY to a Simplex channel (which, given the record tropo lift conditions, were surprisingly quiet).

I was seriously pissed off when they thought they should swap QSL cards!

>> Othewise, great.

>As to concluding that dBm (either A dBm or some quantity expressed
>in dBms) is not absolute, this simply is an expression of an opinion
>that the term ABSOLUTE QUANTITY has no meaning whatever.

>This may be interesting philosphy, but it is not useful engineering.

Let me make one clarification regarding the dBm; that is, the
original definition is "1 milliwat dissipated in 600 ohms," which to
my way of thinking is an absolute quantity. I say this because, by
referencing a power level dissipated in a certain load resistance,
one is defining an absolute value of power under well-specified
conditions. We know the power and the load resistance, and we know
from that the applied EMF and resultant current, and can relate the
power itself back to some absolute amount of energy used to perform
work. In that sense, I think, the dBm is then an absolute measure.

What I failed to do in the article was (a) discuss the original
definition of dBm as noted above, and (b) equate that to modern
usage which simply *assumes* that dBm, when used to discuss signal
levels, are all dissipated in a common value of resistance (not
necessarily 600 ohms). For example, when an RF engineer disusses
dBm his assumption is that his circuits are all 50 ohms; if the
impedances vary, then we have a problem because the amount of EMF
necessary to disipate 1 mw in 50 ohms is different from the EMF
required to dissipate that same amount of power in 600 ohms. As
an example, expressing receiver sensitivity as "-124 dBm" for
one receiver, and "-127 dBm" for another is meaningless if the
input impedances are not the same (well, not "meaningless,"
because one can always translate from one set of parameter values
to another, but certainly confusing).

The point I really wanted to get across in the article was
that dBm can be measured and related to a known power level,

while dB is truly totally relative. I fear that many newcomers to ham radio become confused on this point, just as many non-RF engineers do here at work (One sometimes hears things like "the antenna gain is 12 dBm" or "we measured the system sensitivity and it was -127 dB" or "that amplifier has 0 dB output which is pretty high and might overload the receiver front end," etc.).

And, of course, these terms are not "rocket science" and can be easily explained and understood by anyone, but because they're "basic" no one bothers.

And thanks for the nice compliments; if the article helps someone gain better understanding, then it was worth the trouble to write.

>73 de dave, n9uxu

you short the key line to ground to key the transmitter....although it's been quite a while since i've had a TS-520, i recall it was grid-block keying as far as how the keying worked internally.

in general, you close a switch to activate a transmitter (that way if the key isn't connected, the transmitter doesn't come on). i believe even the few radios that have a "positive" key line input have a conventional ground-to-key input as well.

if you're building a keyer or some control device, you might want to consider putting in an optoisolator to actually be the device that "keys" the transmitter. lets you avoid having to figure out what to do about any voltages that could be found on a keyline.

My apologies if this topic is inappropriate for this group.

Quantas and Air New Zealand share the Sydney-Auckland-Los Angeles route, Quantas providing service one day and Air New Zealand the next, and so on. Both airlines use 747-400 aircraft. Quantas bans the use of compact disk players at all times, claiming that they interfere with the electronics of the aircraft. Air New Zealand, on the other hand, requires compact disk players to be off only during take-off and landing but they can be used at any other time. As far as I know the safety records of the two airlines do not differ on this route, so can anyone provide a rational explanation of why Quantas believes compact disk players are dangerous?

When subscribing or unsubscribing to a mailing list, *DO NOT* send a message to the entire list saying 'subscribe me'. Most mailing lists are automated and the controlling program doesn't look in the outgoing stream for instructions. Those posts, however, do annoy the hundreds of people on the list. When you subscribed, you should have gotten a note explaining how to get off the list.

If you are losing an account, please unsubscribe from any mailing lists that you are on (if you can). Don't just assume that the maintainer will handle it. Some of us get well over 100 bounces a day, and that makes our volunteer work more of a chore.

Thanks./mike

Larry is right. We are talking about the guy who posts his mother's
cookie recipe to ALL@USBBS, not outlawing the 40-meter Cookie Net.

As many have said, this newsgroup is more relaxed as far as what we
can and can't post. What would happen, though, if that guy posted a
cookie recipe on rec.radio.amateur.misc? He'd get flamed off the net.
He would be told that this is not the place to post cookie recipes.

Ditto for the Packet BBS system.

1208. SELCAL

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-24 15:04:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2EAB4E8F@smtp>
Source record: 258175

All,
In aviation, all transtlantic travel require aircraft to have selcal ID units on board. SELCAL is a 4 letter code which is used to beep an aircraft on HF so that the pilot does not have to listen to all the frequency chatter. In other words it's a tone squelch.

The system works on tone separation of 2 tones. In other words a dual tone signal is emitted where say, one tone is emited at 850Hz and the other at 1041Hz, their separation identifying what signals these are.

SELCAL signals are tones from A to R and they are transmitted in two pairs, ie the pilot would say "SELCAL check, AQDB" and the ground control would send these two dual tone signals. Since this is SSB, the decoder looks for separation of tones rather than the tones themselves.

Does anyone have any idea if there is a device on HF handling SELCAL. I need to implement it on HF for a net and the closest I have found in Motron's HF-alert (it works on morse code however). Anyone know of a simple way of doing a selcal unit? I can suply the microchip programmed (with the help id Advanced Micro Devices) if anyone can supply easy schematics for the rest or help.
Any info would be appreciated.
Thanks
Peter, KC1QF

>the u[pgrade)...even pulled in a few new states...

Did anyone hear the opening to all US last night (Sunday, 10/23) until
a couple of hours *after* sundown? I heard a lot of 10m SSB and CW
out here near Boston.

Just a reminder - this is stuff that you can work with your Novice, or
with a Tech+HF license. Small antenna (16' dipole) and a $100 used
radio and you're on!

NOONE has any right over anyone elseon frequencies. If the ARRL starts a
bulletin on the frequenciy and steps on other QSOs in progress, they are
just are liable as anyone else.
Of course they can always say, "I didnt hear them."
K1MAN's 45 minute broadcast on 14275, about 6 times a day, steps on others
most of the time, because it's an automatic broadcast.
But then such is life....

As I recall, NTS message traffic over the PBBS system is not directed to
any specific callsign and generally does not include items of interest
to amateur operators.

In fact, I seem to recall that most emergency health and welfare traffic
over the PBBS system didn't either.

Hmmmm, I guess its time I broke out pen and paper.

It's an inexpensive rig where you get what you pay for. And what you
get is a mediocre design with lots of annoying little problems. The
+12V connector radiates copious amounts of RF. The break in CW doesn't
work very well. You can't use an external keyer unless you build a
"weight increaser" circuit to go between it and the rig. There is insufficient
IF gain, especially on CW. This forces you to use the RF amplifier a lot.
The cooling fan "keys" in unison with your CW dots and dashes because it's
sense circuit is voltage sensitive and your +12V is going to vary with
key up/key down. The squelch for 10 M FM is lousy. The remote tuning on the
microphone is poorly designed. You can't turn the power down to run less
than 100 watts reliably; its about 5 degrees from 0 to 100 watts. The
filters are nothing to write home about. You can't run AMTOR because the
transmit receive switching is too slow. Etc, Etc. Etc.

If you just want a simple ragchewing rig that is small and cheap, then
you are probably OK, though.

>BTW: I'm a studying ham, and hope to take the No code tech VERY soon..

Yes, you DO have to "air" your callsign in plain English. How do you
KNOW (for sure) that the person actually talking IS, in fact, the
individual the FCC assigned the call letters to??

PGP (as applied to packet) would allow you to verify that the
message did, in fact, come from the individual who "owns"
the call sign under question.

You could even extend such verification to ANY digitized data,
including digitized voice.

For more info on PGP and cryptography, check out the FAQ in
sci.crypt. 73.

>change the relationship.

>Rajiv
>aa9ch

Having researched the use of "absolute" a bit more, I retract the use of that term and will correct the article to refer to the dBm as a relative measurement whose reference is *predefined* to be some specific, measurable quantity (in this case a milliwatt), whereas the dB is a measurement whose reference can be anything the user chooses. I'll think on this a bit more and choose the words carefully, but in any case the following excerpt is what put me straight in my thinking (although the impetus for researching it was created by several excellent follow-up posts, for which I thank the respective authors).

Here is the excerpt, with emphasis arrows (><) added:

Quoted from "Handbook of Engineering Fundamentals," Eshbach, third edition, p.397:

"So-called Absolute Unit systems. During the middle of the nineteenth century it became customary to refer to measurements in terms of the centimeter-gram-second mechanical unit system as 'absolute' measurements, and the cgs system, as adopted and recommended by the British Association for the Advancement of Science in 1873, was called the 'absolute' unit system. This designation is >unwarranted<, as >no< system can claim 'absoluteness.' The reduction of the fractional electrical dimension systems to the three so-called absolute mechanical dimensions is inadvisable and the resulting absolute unit systems will, therefore, not be considered here. The complete unit systems resulting from the fractional dimension systems, which sometimes are called 'completely absolute' systems because of their complete set of fundamental dimensions, will be called here 'theoretical' unit systems.*"

>from London to Paris.

Ah, I understand now, my apologies for jumping to the wrong conclusion.

>I was seriously pissed off when they thought they should swap QSL cards!

This is what really set me off. I may be reading you wrong again,
but it seems you think QSLs should only be sent when they could
count for some contest or award. Perhaps instead it was the operators
using the repeater who thought the QSL would count for a contest or
award. In that case, I've misinterpreted your complaint yet again.
Meanwhile, I think QSLs should be sent as a polite thank you for
a meaningful contact. It shouldn't matter if that contact is direct
or via relay. So I'd find stations wishing to exchange QSLs after
an unusual repeater contact perfectly normal.

Gary

I'd suggest that there is no *need* to work DX at all. However, if
one gets enjoyment out of exploiting a somewhat rare propagation
condition via repeater, who is to say that they're wrong?

>3/ I was questioning the concept of exchanging QSL cards for repeater
> contacts.

Ah, perhaps I wasn't reading you wrong after all. Are you saying that
QSL cards should only be exchanged under circumstances where they count
for score in some gaming activity?

>4/ I was questioning the attitude of a base station who hogs a repeater

I started subscribing to 73 largely do to my feeling that I was getting an alternate view of Amateur issues based strictly on facts and logical thinking. Of course, I may have so deluded myself because I found his views often matched my own.

A few issues back, Green, apparently unable to contain himself, provided an insightful view of how he injects thoughtless emotionalism into his thinking.
In this case, rather than respond logically to logically made arguments, (in the letters column), he heaped uncalled for vitriolic insults on those who disagreed with him.

Detail:

Earlier in the year, Green made some sneeringly negative comment about gun ownership and the NRA in one of his editorials. A couple of months later he ran a couple of polite, logical, point-by-point letters seeking to debate the issue with him.
He responded with more sneering insults, mixed with emotional ranting,(without facts), an a litany of non-facts, sounding as if he had just been studying Handgun Control Incs. misguided plans to disarm the honest citizen.

You'd think a guy who makes his living courtesy of the 1st amendment could see the value of defending it, especially a guy who purports to be as conservative as Green.

I don't send money to folks who spend it forcing me to defend my rights. Life's too short to pay somebody to steal my spare time and funds.

Good bye Green! No renewal for you.

I guess I'll join ARRL and read their magazine.

1225. Re: NoCal OO goes after Packet BULLetins

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-24 20:58:35 UTC
From: sww@csuohio.edu
Message-ID: <1994Oct24.205835.11821@news.csuohio.edu>
Source record: 258029
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.digital.misc

The point is being missed. Are packet bulletins addressed to either "all" or a like form of "all" (MUSIC, SEWING, CRAFTS, NAFTA, etc.) indeed informational bulletins?

Is there a difference between:

1. My tuning in a W1AW transmission and listening to an ARRL bulletin.
2. My tuning in a packet BBS station and reading an ARRL bulletin.

I submit that both forms of the bulletin are the same. I end up with identical information. In both cases, the bulletin is an "informational bulletin". In both cases, the transmission is one-way. There is not an exchange between two stations. The form that the data takes is irrelevant. The mode upon which the data is transferred is again irrelevant.

Then, what is the difference between:

1. My tuning in a packet BBS and reading an ARRL bulletin.
2. My tuning in a packet BBS and reading a bulletin about cooking.

I again submit that both forms of bulletin are identical. Even a request (buried in the recipe) from a cook for more cooks to respond is nothing but a "CQ" and, again, a one-way flow of information.

If there is no difference, could W1AW begin harassing Clinton about his viewpoints on foreign trade (in their bulletins)? Could they discuss cooking or sewing? We must agree that the rules would prohibit such bulletins.

Because we use error correction causing a "connect" to be required does not change the fact that a packet radio bulletin is a one way transmission. It is not addressed to a ham. It is addressed to the ham community, to the general public, just like the W1AW bulletins. The changing of the definition of a "bulletin" due to the medium upon which it is transferred is not proper.

The OO is then correct. Packet bulletins are informational bulletins and subject to the restrictions of that definition. Information outside of that which is of direct interest to the amateur service is not allowed.

I would be pleased to see the FCC interact with the amateur service by way of NALs. Our ability to self police our service would be greatly facilitated by occasional guidance.

Please, if you are going to reply, don't do a line-by-line rebuttal.
Write something original. You also might note that the thread deals
with BULLETINS, not QSOs.

73,
Steve

>Come on! Think about it! The issue of sexual orientation comes up
>anywhere and anytime. When a man talks about his wife you think
>he's not also talking about his sexual orientation?

You're missing the difference between making a reference implying sexual orientation and *making an issue* of sexual orientation. I don't care whether you do something with your wife, your husband, your boyfriend, your girlfriend, or with your dog. Feel free to tell me on the air that you and your boyfriend (or "significant other," or "better half," or "other half," or any of the gender-neutral terms) did such-and-such.

I am not going to abruptly terminate a QSO because the other party reveals the earth-shattering news that (s)he doesn't have the same sexual orientation I do, and (here comes the important part) *the existence of LARC is not going to "cure" those who would.*

>And what about when people talk about their
>kids? You don't think that implies some sort of sexual orientation?

Not these days. Even if it did, WHO THE HELL CARES??!!! It's not an *issue* until you insist on making it one.

>Obviously you don't see how sex is an important part of people's
>personal lives and how they make that public.

Bingo. There's your problem. You're taking an important part of your *private* life and insisting on making it *public.*

> But we see it.
>We see it everyday.

What I don't see is why so many gays feel the need to make their sexual orientation the focal point of their lives.
Perhaps you could explain that to me?

Bob Stanton (bob.stanton@exchange.com) wrote:

: I give up! I have been trying to learn the code since before I was
: licensed with no luck. I have tried tapes... all I do is memorize the
: tape... not the code. I sit in front on my computer pounding my head on
: the keyboard (figuratively). I HATE CW!!!

Ah, the bittersweet memories. I remember saying the same words when I was learning code. I said the same thing when I was learning to play the guitar. (I even tossed an old acoustic out the window!) It took me all of a month, practicing about 2 hours a day, to finally get it down well enough to pass my 5 wpm test (the code that is -- there are some who have heard my screaming '64 Stratocaster and say I NEVER really learned the guitar). Now, years later, I don't hate the code; I don't even know where my microphone is. But that is just me; love it or hate it, you are on the expedient track to try to learn it to get your HF priveleges.

The first thing I suggest you do is to stop hating it. I realize that to you it is the most inane requirement ever dreamed up for you to have to pass to get your HF phone priveleges, but until things change, it is here and we have to do it or do without HF (changing it is another flame war -- let's forgo that from this thread and help this fellow out with suggestions). Reminding yourself that you hate it may be appropriate and entirely correct for you, but it is getting in the way of your goal, so it needs to be set aside. Treat it as neutrally as you can possibly muster.

I wonder if part of the problem is dit-and-dah recognition. I have heard the comments of many people exposed to the code who say that they can't tell the difference between a dot and a dash by ear. At 15 wpm characters, this is not surprising, and most code tests use 13-18 wpm characters that are sent at a 5 wpm rate (the Farnsworth method). If you hear a character, say "B" (daah-di-di-di) and say to yourself "Daah-di-di-di --- now what the *&*&*#$ was that letter?", then you are having trouble memorizing the code. If the "B" is sent and you say "What's that sound?", you are not hearing dots and dashes. If you have a versatile code-practice program, try slowing the character speed down to 5 wpm until you can clearly hear the difference between a dot and a dash. Once you do, and if dit-dah recognition is the problem, it will happen suddenly. When it happens, try a 10 wpm character speed, etc., until you are at 15 wpm characters.

From there, it is a question of ensuring that you have memorized all of the characters. The IDEAL way is to memorize the sound by ear, so that when someone send di-daah, you register it as a "A." Ideals are great, and if you can do it the right way like that, go for it. However, I learned to SEND first and it didn't seem to cripple me forever, so give that a go. You don't even have to really SEND it, just be able to say "di-daah," with the correct

rhythm so that your dits are shorter than your dashes. Once they are all actually memorized for sending, you can then try receiving. It will use a different set of neurons in the old gray matter, so try a 15 wpm character with about a 1 wpm rate, if necessary, to give yourself plenty of time to connect what you hear with what you have memorized. Purists will not approve of my method, and I recommend you first try to learn it "by ear." If you want to try the "send first" method, try it out on the first group of letters on your tutorial tape. If it works, the heck with the purists!

Now, I think that the ARRL tapes are ideal for introducing the letters, although ANY good training tape that introduces letters a few at a time will serve you well. Most tapes also contain practice material, but, as you have learned, one tends to memorize. For practice, once the letters are learned, use computer programs, code-practice bulletins or on-the-air listening.

If you can find an Elmer to help you learn, it helps. And if you do get flamed, don't take it to heart. You can feel anything you want about the code, and you can even work your butt off to change the requirements if you like (just leave a few kHz for me to work CW with the other enthusiasts). I respect that you are willing to do what you have to do to earn the HF priveleges you want. Learn it and pass it. We can discuss later whether you want to forget it or not. :-) In the meantime, good luck, whichever way you choose to do it.

73, Ed

Whoo-ha! Jeff, it said *well-built* not self-built. And even if
it were self-built, what evidence do you have that this would
eliminate all the no-codes?

>I guess I am a REAL HAM since *all* my transmitters are built from
>scratch (they're all CW, of course).

OK, you've done well on one part of the Amateur's Code, at least according
to your misreading. Now, would you like to consider working on some of the
other parts?

To all radio amateurs

SB SPCL ARL ARLX030
ARLX030 Bill Leonard, W2SKE, SK

Bill Leonard, W2SKE, SK

Bill Leonard, W2SKE, a former president of CBS News, died October 23 in Laurel, Maryland. He was 78.

Leonard, an avid Dxer and contest operator in the 1960s and 1970s, was an advocate for Amateur Radio, writing, for example, an article for Sports Illustrated in 1958 entitled ''The Battle of the Hams.'' It described the ''sport of DXing'' and Leonard's role in it from the contest super station of Buzz Reeves, K2GL, on Long Island.

Leonard said in 1981 that he was interested in radio as a child in the 1920s, and received his first amateur license, W1JHV, while a student at Dartmouth College in 1934.

After graduating in 1937, Leonard went to work as a reporter for the Bridgeport, Connecticut, Post-Telegram. After serving in the US Navy from 1941 to 1945, where was involved with electronic countermeasures against German radio-controlled bombs, he joined CBS News in 1945.

As CBS president, Leonard was credited with the selection of Dan Rather as Evening News anchor, as a member of the team that developed the ''60 Minutes'' newsmagazine, and of helping develop techniques to predict election outcomes.

Asked in 1981 about the future of Amateur Radio, W2SKE said ''I have a hunch that Amateur Radio is going to get more and more tangled up with amateur computer technology.'' He also said ''My bet is that ham radio, in one form or another, will be around 100 years from now.''

A profile of W2SKE appeared in March, 1981, QST. Bill Leonard leaves his wife, the former Norma Kaphan Wallace, and six sons.

As is often the case, people have a tendency to flame before they get all
the facts.

This weekend I attended the Northern California BBS Sysops meeting at
Pacificon. This issue and the people involved live in this area and
are known to some of the Sysops, so let me try to give everyone a little
more direct info.

Fred Sober, as OO, was asked a question by a local ham:

If broadcast bulletins of non-amateur subjects are illegal on voice,
why is it OK on packet?

Fred did not know the answer (nether would I), so he started up the ARRL
chain of commands asking the Section Manager etc. Each level in turn
said that they did not know the answer and referred him up to the next
level. Finally he was talking to ARRL HQ.

They also said they did not know and referred him to the FCC and asked him
to "let them know what the FCC says." (I don't know who I was at HQ that
said this, but it sure does not sound like a good idea to me). So,
Fred started corresponding with the FCC. The results he got were right
out of Part 97.

Even then, Fred attempted to keep this quite until it could be discussed
and perhaps a solution found. He posted a "Private" Sysop only bulletin
for Northern California only to make Sysops aware of the situation. A
certain Sysop in the area re-addressed the message to a regular bulletin
with world wide distribution. Now the hate mail is coming in to Fred.

Now I don't like the results from the FCC. But I do not blame the messenger.
Fred was responding in a proper manor to a legitimate question directly
involved with his OO duties. All of this is documented with copies of the
correspondence. Several of the local Sysops have seen it and were aware
of this as it happened over the last year.

So next time it would be nice if some people would try to find out the facts
before they start slinging mud.

I think you are nitpicking about the wrong thing. The reason that part 97 restricts "broadcasting" has little to do with the actual content (even though content is used as one of the restrictors) and much to do with bandwidth and interference. The part 97 rules limiting broadcasting were written with HF in mind and are concerned with preventing stations from just parking on one frequency and blathering away for hours on end even if no one is listening. A packet BBS does not do this. It only sends a bulletin on demand and when there is known to be a receiving station. Also, packet BBSes operate at VHF and above, where band space is not at so great a premium and they do share the frequency with other stations if all parameters are set properly.

I note also that in spite of part 97, we seem to have plenty of "broadcasters" running off on 20 m. so why doesn't this OO do something about THAT! It would be a much greater service to the amateur radio service to clean up that garbage than it is to hassle VHF packet stations.

An old technician's trick at Tek is to make a TV reciever out of standard 7K oscilloscope plug-ins. Start with a 7704 mainframe (which accepts two vertical and two horizontal plug-ins). Plug a 7L12 spectrum analyzer module into the middle two slots. Plug horizontal modules into the two outside slots. Run a BNC cable from the spectrum analyzer vertical output to the 7704's Z-axis input. Set the left horizontal plug-in to sweep at field rate. Set the right horizontal plug-in to sweep at line rate. Tune in a TV station with the spectrum analyzer set to zero-span, and you'll see a picture on the oscilloscope display.

Not a *great* picture, but it sure amazed me the first time I saw it.

Actually, Tektronix 2710 spectrum analyzers will demodulate and display television signals in the traditional sense. You get a green monochrome picture and no audio. If you want audio, you'll need a second 2710 to demodulate that for you :-).

Thirty years ago, when I first got my license, I used a Hallicrafters S40A. It was old even then. I smoetimes knew what frequency I was on, although the sensitivity above 15 Mhz was a joke.

I finally figured out my own frequency by listening for my transmitted crystal controlled signal and working from there.

If it weren't for the ton of rotten paper capacitors in that rig, I probably would have kept it. It would never blow away in a windstorm.

I'm thinking about getting a new car, and it would be a real bummer
if I find that my 100 watt hf rig screws up the car computer. Kinda
like the fiasco a few years ago witht he older camry. So I'm
considering one of them sport utility vehicles. Maybe the 94 Isuzu Trooper
as I think I can get a good deal on it, and the insurance is not too
bad compared to other SUVs. So, anyone out there running HF in your
trooper? How about other Isuzu vehicles?

Lets take a little poll: If your radio *causes* problems with your
vehicle let me know, and I'll summarize for the newsgroup.

Btw, I've been using the HF radio (a kenwood ts440/at) in my mazda 323 turbo.
It has a computer, but doesn't seem affected by the radio.

Thanks for any info.

First of all, you could eliminate some possibilities. Try the HT and amp
with an isolated power supply (12V, powered by 110V...or another car batt.)
This will let you know if the sudden power drain is triggering some "low
voltage warning" feature of the alarm. Maybe it's not a "feature", but
just a quirk. Mine gets weird at low voltage. If that's it, you probably
just need a bigger battery and/or alternator. If you can't do that,
you'll need to run a cut-off switch to the alarm and it's back-up batt.
(if it's got one).
If you think the RF output is the trigger, confirm this with a dummy
load at the output of the amp. If that is it, you may solve your problem
by moving the alarm and antenna as far apart as possible. If that STILL
doesn't do the trick, you'll probably have to use the cut-off switches
(or buy a different alarm).
Let us know what you find.

Not *all* of the code test free by any means, though certainly a
majority of today's amateurs sadly lag the state of the art whether
they've passed a code test or not.

>Notice that the `progressive' amateur above (in 1929) built *everything*
>in his station.

Yep, that's because *state of the art* equipment wasn't practically
available commercially in 1929. The ham wanting modern equipment
on the leading edge of radio science had to build his own. That's
when voice modes became popular, especially that cutting edge mode,
FM, though even AM was fairly cutting edge back then. The primary
advances were occuring in receivers, and hams pioneered double and
triple conversion superhets, crystal filtering, etc.

>How many new hams today will take the time to learn *any* theory,

Well a *few* of the neophyte hams of the 60s and 70s did this, most
didn't. The term "appliance operator" first came to the fore just
after WWII when all those nice appliances developed during the war
came on the market. Systems engineering was the SOTA approach in
the 60s and 70s as more complex, robust, and high performance
communications systems were being assembled by progressive amateurs.

You should hang your head in shame. That wasn't even SOTA in 1929.
You should try assembling a station that could have been considered
modern in at least the 1930s, if not the 1990s. You could start with
something like a selective superhet receiver, or even something as
advanced as Major Armstrong's FM rigs. That only takes a single chip
today.

Yep, they were very popular transmitting tubes. Pushed hard in amateur service, they'd make almost 100 watts, a pair of either kind could do it comfortably. Most of the rigs using 807s are gone now, but you'll still find quite a few rigs with 6146s in the finals.

Perhaps. Consider the grossly different coverage footprints of a HT
and a repeater.

actually, the guys that call hourly end up with their paperwork being set aside so it will be at the beck and call of the folks working the phones instead of over in the processing pile getting entered. if it was put on the bottom of the pile, they would have to keep digging it out again...so you keep the application out of the stream in order to be able to answer questions about it.

ob: the above is tongue in cheek. the right answer is to sit tight for about 10 weeks before making the first call. go to some club meetings, subscribe to some magazines, get some equipment set up and checked out.

They just don't realize they're making ham gear. Once Motracs, Micors,
Mitreks, etc got into the surplus market, a lot of them wound up as
ham repeaters. And before the Japanese HT craze, the HT220 ruled!
Some people think it still does.

they don't make stuff for the amateur market, yes.

but they do make stuff that amateurs can have set up for the ham bands. there are a couple of Motoheads around here that have picked up some recent model moto stuff and had it programmed with the amateur frequencies in mind. seems to work OK (you would expect something else?) but for bang to buck ratio, there's a lot missing in a commercial radio reprogrammed for amateur use. The big one is lack of frequency agility. Then comes things like being able to change parameters on the fly and such.

the moto rigs sound good, perform well and for the way the guys that have them use them they're just fine. I'd rather have something a bit more flexible and not requiring a trip to the radio store everytime i needed to QSY to a new frequency.

>BS>recognize my own call in CW. I will use it ONLY to upgrade. I have
>BS>no intention ever to participate in a CW QSO.
>

I started from scratch with no previous CW experience.
I began listening to CW lectures on cassette tapes, and
after a while found them extremely boring!
I started skipping half of the lectures or more, so when I
finally came to the end of it all, I know all the letters
and numbers, but was very unsecure.
I had a HF receiver and asked on my local repeater for
suitable frequences where low speed CW was present.
If I remember it correctly, on 20m around 14060 kc and
on 15m around 21140 kc.
After listening for a while I understood the lingo,
and started listening to rag-chewing QSO:s in my own
language, mainly on 80m.
Then, together with some other local amateurs in the same
situation and some nice oldtimers, started use the 2m CW part.
That part around 144.075 or so is almost never used at least
in Sweden. (Only if there is a 2m test, or if Aurora is present)
We met once a week with an oldtimer as "netcontroller"
After a couple of months I could upgrade!
So I started to transmit only after having listened to a lot
of HF CW. Then of course I knew (at least rudimentary) how
one expects to behave on CW.

So, that's my story. Good luck!

>have 30 watts amp. and car alarm.

You haven't told us what make and model of car this is in. That can help because there are known fixes, and known lost causes, with different models. Also, is the Larsen thru-hole mounted, or a mag mount? Is the amplifier firmly RF grounded to the vehicle chassis? How are you feeding DC power to the amp? What kind of coax are you using?

All of these questions need answers before we can help. I suspect you're suffering from high levels of RF in the cabin due to improper shielding or grounding of the installation, but it could be something else. We need details (that's where the devil lives).

No more so than if he were mailing you manually typewritten notes and
you noticed that certain letters were struck harder than others. All
that would indicate would be an uneven typing style. Sherlock Holmes
could then probably go into elaborate detail about that person's life
history, but the rest of us mundanes would just pass it off as an
unimportant quirk.

1253. ARLB084 FCC licensing changes

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-25 13:55:42 UTC
From: w1aw@arrl.org
Message-ID: <$arlb084.1994@ampr.org>
Source record: 257982
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB084
ARLB084 FCC licensing changes

ZCZC AG49
QST de W1AW
ARRL Bulletin 84 ARLB084
From ARRL Headquarters
Newington CT October 25, 1994
To all radio amateurs

SB QST ARL ARLB084
ARLB084 FCC licensing changes

The FCC today released a 7-page Order amending its amateur rules, effective December 20, 1994, to reflect what the Commission calls ''nonsubstantive procedural changes'':

1. To permit electronically filed data from VECs (paper applications also will still be accepted);

2. To authorize operation as soon as the new license data appears in the amateur service licensee data base, rather than (as now) when the license document has been delivered (details of how the new licensee can determine his call sign will be announced later);

3. To add a new rules section, ''Examinee Conduct,'' to emphasize that an examinee must comply with the instructions given by the administering VEs;

4. To treat ''Technician Plus'' as a license class;

5. And to provide for a ''renewal short form'' which the FCC says will be mailed to licensees in advance of their expiration date beginning sometime in 1995. The FCC added that renewal applications would be accepted no more than 90 days before the expiration date.

Because of the nature of these rule amendments, there is no notice or comment period required by federal law. Again, these changes do not take effect until December 20, 1994.

>in their calls...which is supposed to be some fancy british pronunciation?

I'd say no. Say what you mean, and mean what you say. if you say "double p", some will undoubtedly think you are using a cute phonetic for d.

BTW--"zed" is the correct pronunciation for z. It keeps it from being confused with c. Of course, only old-timers probably know this, as it hasn't been stressed much at all lately.

I agree with this. (I'm not as good telling them apart yet, but I've
definitely recognized a few bugs. :-)

Of course, it doesn't always work. I've had OTs tell me they were
surprised that I didn't have a W#XXX or K#XXX call. They thought my
fist was *way* too good for a newbe.

>with no plaintext "language" meaning whatsoever.

Since I've never copied at those kinds of speeds I can't refute anything
you say. However, I have read in several different texts that an *average*
person (whatever that means) begins to have trouble distinguishing
individual characters at around 30 WPM or so. From that point on, the
operator is allegedly hearing "word sounds" (i.e., short words, syllables,
etc.) which makes copying code more akin to "hearing" spoken English than
merely translating dit-dah combinations into letters. This is what I
meant when I referred to "language."

Let me re-emphasize that I have only experienced this phenomenon
myself at a very basic level (trying to copy 35 or 30 WPM; my own speed
is around 20 WPM), i.e., hearing combinations as "words." However,
my problem is that if what I have read is true (as described in the
preceding paragraph) I am at a loss to understand how someone can copy
coded groups at 40+ WPM. Mind you, I'm not disputing what you say,
it just contradicts what I have read elsewhere. I'd be happy to provide
a list of references, because I'd like to have the question answered
(and verified) in some definitive way.

Perhaps I shouldn't have placed so much faith in what I read, but
the concept of not being able to copy strictly characters beyond a certain
speed and thus resorting to a sort of "language-like" mode where one
"hears" strings of characters as syllables and words seemed supported by
the fact that commercial radiotelegraph code tests, which had two parts,
always had the "5-letter groups" part at a slower speed than the "plain
text" part (16 WPM groups/20 WPM text for 2nd Class, 20 WPM groups/25
WPM text for 1st Class).

>The best operator I ever knew could copy 60+ WPM on a typewriter, but had
>no idea what he'd copied until he rolled up the paper and read the text.
>He was trained as a Navy operator in WWII. He always maintained that the
>trick to rapid copy was to never think about it, just let the body do the
>work it was conditioned to do. He said that trying to make sense of text
>while copying was a sure way to make errors. He could carry on an unrelated
>conversation with someone in the radio room while copying. He said that made
>no difference since his conscious mind wasn't involved with copying, that

>it was all conditioned reflexes at work.

This is all true, and I have anecdotal evidence of railroad telegraph operators who performed multiple tasks in the station (selling tickets, etc.) all while copying *and comprehending* by ear, occasionally interrupting other work to "answer the telegraph" and make a comment to another operator, answer a question, etc. I emphsize "anecdotal," however, so exaggerations may have crept into these "stories."

: a one way communication, all that has to happen if for the originating station
: to receive one reply to the message to make it a two way (read non-broadcast)
: exchange! If this is not correct, the next thing to be "attacked" in this
: manner will be the net control operators starting the net. I have addressed
: messages to groups like HARDWARE and received a number of replies - as far as
: I'm concerned this is just another way to initiate the exchange of
: information between two (or more) stations and therefore allowed under Part 97.
:

A "CQ" is indeed defined as a one-way transmission in 97.111. It is allowed.
Appending a "CQ" to a signature file would be an obvious attempt to get
around the content being a bulletin.

73,
Steve

Hello fellow Hams. I saw this on the FCC's Daily Digest
and thought it would be of interest. Don't call me if
you have questions, cause I can't answer them.

Rich

AMATEUR SERVICE. Amended amateur service rules to
provide an electronic filing capability to the volunteer-
examiner coordinators; to clarify that amateur station and
operator licenses are authorized as soon as the license data
is entered into the Commission's licensee data base, and to
reflect other nonsubstantive procedural changes. (By Order
[DA 94-1158] adopted October 17 by the Chief, Private
Radio Bureau)

Whether it's "proper" or not, I really couldn't say. But in my opinion it can
(does) cause confusion, particularly when folks aren't expecting it :-)

> all the imaginative phonetics heard and people who say zed for the z in thei
> in their calls...which is supposed to be some fancy british pronunciation?
> What does the group think?

Hmm ... to 'Zee' or not to 'Zee' ...

Where did you get the idea that 'Zed' is '... some fancy british
pronunciation'?

John, I don't know what your ethnic origins are, and what linguistic rules
you may or may not apply when deciding which would be correct. Unless I'm
mistaken (and I'm sure that there are plenty of folks who will be ready to
correct me if that is the case) American English is considerably predated
by the version of the dialect spoken in England. If the inhabitants of the
United States have chosen to corrupt the English language, then so be it.

Oh - by the way - just how long, exactly, have you been a bigot?

From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.94Oct25104240@rinhp750.gmr.com>
Source record: 258073

In article <2d.26369.2003.0N851631@exchange.com>, bob.stanton@exchange.com (Bob Stanton) writes...
> I give up! I have been trying to learn the code since before
>I was licensed with no luck. I have tried tapes... all I do is memorize
>the tape... not the code. I sit in front on my computer pounding my
>head on the keyboard (figuratively). I HATE CW!!!
>Bob KD4ARD

I used a technique similar to the one Tom N1OOQ mentioned. I set up my keyer to generate random letters/digits/prosigns in five character groups. I'd listen to the keyer or to a tape made from the keyer at a rate where I could get 4 out of 5 characters (80% copy). Four out of five seems to be a good challenge point for me. I don't get discouraged at that point because I can achieve well over half of it and 100% isn't very far off.

Day by day I'd adjust the speed to maintain a constant 80% challenge. Some days that would be faster than the day before, some days it would be slower, but the challenge point was always 4 out of 5. I didn't keep detailed records of my progress but on a month by month basis there was a very definite and pronounced positive trend.

In spite of having some very serious family problems at that time I managed to go from nothing to Extra in about a year and a quarter using this technique.

I listened to the practice tape whenever I was in my car. In fact, I went a whole year without turning on the car radio. When I finally did turn it on, I discovered two things: (1) The FM section would no longer work, and (2) I didn't care. I'd listen to code in the background when I was doing other things around the house. I'd pause a moment here and there to grab a few groups and then carry on. I'd tap out street signs on my thigh while driving. I'd whistle license plates. (I'd *REALLY* get excited whistling out amateur radio callsign license plates.) I'd listen for morse code in the normal computer room background noise.

The most important thing is to never NEVER get discouraged. Discouragement will kill enthusiasm every time and enthusiasm is your best friend.

We haven't heard much from Joe Mastroianni AA6YD lately but I owe a lot of my enthusiasm to his writing. One of his posts answered your query quite well. A tidbit from something he wrote back in 1992 went something like:

"Rip your HF rig microphone forcably from it's socket. Place it squarely on a firm concrete surface. Apply a 7lb sledge hammer. Scream 'God is on MY side'. Repeat until well done.

Do the same to the microphone on your 2M mobile rig if there is any possibility it is compatible with your HF rig. Motivation bordering on religious fanaticism will help you learn CW VERY QUICKLY." ... "Connect your HF rig to your home stereo and play the W1AW practice at 108dB above ambient. This is a sound you can internalize. FEEL the letters and numbers. Write them on a large blank wall. Get the kids to help. They LOVE this kind of thing."

Remember if you can do 2 words per minute you can still do more than 99% of the people you graduated with.

There are some international calls on my Buckmaster CD. However, there is
also a notice that some countries do not allow this information to be
distributed electronically -- it may be in the printed CallBook, but not on
a CD. Gee, not a bad idea: protecting electronic dissemination of personal
info. Too bad Uncle Sam didn't think of it.

>"informational bulletin". In both cases, the transmission is
>one-way. There is not an exchange between two stations. The form
>that the data takes is irrelevant. The mode upon which the data is
>transferred is again irrelevant.

I disagree. You have to do more than "tune in" to a packet BBS. You
have to establish a two way connection and *request* the information.
It's third party traffic pure and simple. Two amateur stations are
participating in information exchange.

>Then, what is the difference between:
>
>1. My tuning in a packet BBS and reading an ARRL bulletin.
>2. My tuning in a packet BBS and reading a bulletin about cooking.
>
>I again submit that both forms of bulletin are identical. Even a
>request (buried in the recipe) from a cook for more cooks to respond
>is nothing but a "CQ" and, again, a one-way flow of information.

Again, you do more than "tune in", you must *request* the
information. Unlike broadcast, you are an active participant
in the process. A CQ is not a true one way transmission. It
is an intergal part of establishing a two way exchange of
information. It's a solicitation for a response.

>If there is no difference, could W1AW begin harassing Clinton about
>his viewpoints on foreign trade (in their bulletins)? Could they
>discuss cooking or sewing? We must agree that the rules would
>prohibit such bulletins.

Yes, because they are true broadcasts. Anyone passively listening
gets them. Packet bulletins are fundamentally different in that

active participation is required.

>Because we use error correction causing a "connect" to be required does
>not change the fact that a packet radio bulletin is a one way transmission.
>It is not addressed to a ham. It is addressed to the ham community,
>to the general public, just like the W1AW bulletins. The changing of
>the definition of a "bulletin" due to the medium upon which it is
>transferred is not proper.

If you take this line, then you must squelch all roundtable and net
operations. Just like the packet bulletin, each station makes statements
to the participants and awaits responses from whomever is interested
in the topic. Packet bulletins are no different except that they are
not conducted in realtime. They are simply the packet version of the
roundtable or net. If the topic of disscussion is allowable on a net
or roundtable, it's also appropriate for packet bulletins.

Bulletin is misleading terminology in this respect. The destination
address header should instead be considered as a special interest
group address, or as we call it here in netnews, a newsgroup. In
other amateur use, we'd call it a net or roundtable. The key is that
people have to "check in" to participate, on packet or on a voice
net. It's not primarily a passive activity like listening to W1AW.
With W1AW all you *can* do is listen, because they don't monitor
the frequencies on which they broadcast.

Several thousand dollars in fines, possible imprisonment, and loss of
your license. At least here in the USA, it's illegal to use a callsign
improperly.

One story I heard some years ago from the late W4QE was about
the ham who wired an extra resistor into the "dot" side of his bug
(this was back in the days of cathode keying) and the change in
resistance (and resultant slight shift in bias level on the
oscillator) "pulled" the oscillator in frequency so that dots
were on a slightly different frequency than dashes. Talk about
a distinctive fist.....I'm sure this would have been in the early
'30s, before crystal control had caught on and when LC oscillators
were commonplace. Of course, the "purity and stability of emissions"
rules which were instituted in the '30s changed all that.

>can do that now, just ignore the posts to cookie, recipe, ect. Maybe
>we should get the ARRL to propose to the FCC what topics are to be
>talked about on each frequency for each band.

I don't think that would be a good idea. I think you should be able
to talk about whatever you feel like talking about. The same is true
for packet, or any other mode. It's just that indiscriminately
posting bulletins to every PBBS in the country about things that are
not of interest to the general ham population is a waste of resources
and annoying. Depending on the interpretation of 97.113(b), it might
also be illegal.

1267. CW Palindrome Game!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-25 15:43:11 UTC
From: arthurc@crl.com
Message-ID: <38j92f$5q8@crl.crl.com>
Source record: 257985

OK, remember what a palindrome is -- a word or a sentence spelled the same way backwards or forwards:
Dad
Radar
A Toyota
A man, a plan, a canal -- Panama
Able was I ere I saw Elba.

The other night, while going nuts studying for the code exam, I began to wonder about Morse code Palindromes -- words or sentences for which the dots and dashes would be symmetrical around a center. Such as:
wig .-- .. --.
Easy one = He is 5
Who can come up with the longest single word or longest sentence that would be a CW palindrome? Extra points if you include a punctuation mark.

1268. Questions on this and that

Still getting my newbie feet wet in HF CW. Here are a few questions that have arisen over the last few weeks:

1) I've seen a description of an RF ground feed that consists of a length of RG-8, with ceramic capacitors between the shield and center leads at each end. Since one end will be outside, what is the best method for weatherproofing? Silicone caulking? Something else made expressly for this application?

2) I heard WB9RUM talking to a CBAGV (I'm pretty sure) on CW last night. Where would CBAGV be? Is that Chile? Is it the norm around the world for the second or third character of the callsign to be numeric? If so, would CBAGV then be some sort of special sign or did I probably just mess up copying the callsign?

3) I live in the far northwest area of grid EL29. In fact I may be in another grid square altogether. Where can I find the latitude/longitude definitions for the various grid elements?

4) Did I read somehwere, or did I just make it up because it sounds reasonable, that one signs (or may sign) ######/QRP when running low power?

I know these questions are all over the place--thanks for your help.

The only problem I have with silicon caulking is that acetic acid
is an active ingredient (or used to be, anyway) and in the past I have
encountered corrosion of the connection from the acid. Perhaps someone
else has more up-to-date info.

>2) I heard WB9RUM talking to a CBAGV (I'm pretty sure) on CW last night.

Probably C6AGV and he either sent it wrong or you mis-copied. I'm
pretty sure Chile is CE, and I believe C6 is the Bahamas.

>3) I live in the far northwest area of grid EL29. In fact I may be in
>another grid square altogether. Where can I find the latitude/longitude
>definitions for the various grid elements?

Piece of cake. Grid squares are divided by degrees of latitude
vertically (36,37,38,39,40, etc.) and every *two* degrees of longitude
horizontally (76, 78, 80, 82, etc.). You can get a U.S. Grid Square map from
ARRL for a buck.

>4) Did I read somehwere, or did I just make it up because it sounds
>reasonable, that one signs (or may sign) ######/QRP when running low
>power?

Yes, you may do that and many QRPers do. I used to when I ran QRP,
because I liked getting QSL cards addressed to "K4MSG/QRP" as "proof"
that I was actually running QRP (it wasn't really "proof") but it made
my QSL cards for QRP WAS seem more credible somehow).

>I know these questions are all over the place--thanks for your help.

Even that isn't always fool proof. In California, although you can use
a PO Box for your mailing address, you still need to provide your
residence address as well to the DMV.

And-- if you have one of those commercial PO Boxes that resemble a
street address and used that as a residential address, the CA DMV
eventually finds out your actual residence address (I know-- I'm
figuring the DMV got my true residential address from my insurance
company or the area public utilities. Eventhough they mailed the bills
and other misc. info to the mailing address, what a surprise last year
during vehicle registration renewal that my residential address
appeared on the new registration slip...)

>power?

You might not want to do this, for some folks will not respond
to your CQ if you append /QRP to your call. After a QSO is started
then feel free to brag to the other fellow that you're only running
x Watts (where x <= 5 for true QRP; x < 1 for QRPp).

There's a QRP email newsgroup - let me know if you're interested
in subscribing.

Gone? Gone? We are offended. Actually, the 807 saw a lot of service
as a modulator, and later on as a result got adopted by the audio folks;
a lot of audio amplifiers out there used them, and a few still do.

Personally, I think the 833 is the way to go, but then I'm biased.

1284. QRN from neighbors patio lights

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-25 20:21:42 UTC
From: tboza@ccm.hf.intel.com
Message-ID: <38jpcm$r03@chnews.intel.com>
Source record: 258005

At night, I have a S9 continous AC buss between 13.900 through
14.100 MHz. I got out my DC pocket SWL receiver and traced it
down to my next door neighbors patio lights. They are the
28VDC type, with some type of powersupply/timer. It must have
a 14.000 MHz osc switching circuit in it.

I know my neighbor does not like it when I get RF into
his TV, VCR, or telephone, however I don't like it
when his patio lights get into my HF receiver.

Any suggestions on how to handle this situation without
causing WW-III ?

>in their calls...which is supposed to be some fancy british pronunciation?
>What does the group think?

When you say "XY8 Double PQ" you are "legally" implying that your callsign is XY8DPQ instead of XY8PPQ. What do you think the callsign would be if a guy signed "WA5 Double My Bet"? His call is WA5DMB, not WA5MMB. Do you see my parity? I agree that this is not a serious problem, but there are alot of people who do not agree with the "double letter" ID deal.

On a side note, but still on the same topic, the same goes for the guys who sign "KA5NV and a W". First, it sounds stupid, and someone hearing that for the first time might think, "Hmmm KA5NVAAW". I know that will never happen, but I think the "and a" stuff is dumb.

That's my $.02. Forward all flames to bitbucket@trash.can.

I believe you are referring to the Metrum II. I've never seen one, just the service manual.

I use several Motorolas for amateur work; I have a Fast-Lok VHF-High MCX100 in the car, another Fast-Lok VHF-High MCX100 on packet, a VHF-High Maxar-80 on packet, set up a UHF Micor mobile for packet, set up a VHF-High Micor for packet, etc.

The mobiles tend to make nice amateur radios. No, I don't buy them brand new. But there are good deals to be had if you know how to work on radios and aren't too cheap to buy the service manual from Motorola.

What isn't legal? As long as no one is encoding text to obscure meaning,
and properly identify with a complete callsign every ten minutes (for US
amateurs), the callsign may be abbreviated.

What makes you think this isn't legal?

1288. WWW Repeater Database Project

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-25 21:12:24 UTC
From: nsyslaw@straylight.acs.ncsu.edu
Message-ID: <38jsbo$n39@taco.cc.ncsu.edu>
Source record: 258013

Let me begin with my thank you's to all who've helped in this project! And if you don't yet know about this project, there's more info at the end of this post.

First, the good news! The bugs in submitting a repeater into the database have been fixed. You can now submit a repeater and (!) the submission is immediate. Once you submit it, you can now go search for it, and you'll find it!

Now, the bad news. I didn't realize just how serious the bug in submitting repeaters was. Consequently I lost most of the submissions and wasn't able to recover them. If you submitted anything and can't find the entries, please (!) resubmit them or email them to me and I'll submit them.

My apologies to those who submitted entries!

Now, for those of you who may not have heard of this project:

The Online Repeater Database Project is a World-Wide-Web based database interface, allowing you to search for repeaters in your area (state, actually). You can also search by callsign or by frequency, or even by country (but this may return a large list). It's part of the Amateur Radio server available at URL:

http://www.acs.ncsu.edu/HamRadio

You need to have a forms capable browser such as Mosaic to use the database. (I'm still working on the problems with Lynx). There are many other pages there as well, such as Newsline (from Bill Pasternak (copyrights reserved)), a Sarex and Satellite Operators page, A Satellite Pass Prediction gateway for amateur satellites, a list of other Amateur Radio web servers and pages as well as the usual frequently asked questions, FCC part 97 rules and ftp sites.

> the restrictors) and much to do with bandwidth and interference. ...

Do you have a reference for this assertion? I rather suspect
that you're guessing, and I believe that you are wrong.

Be that as it may, the rules being applied are not new. I
doubt whether the FCC's interpretation as expressed differes
(significantly) from that which they have held for years. That many
of us, apparently, want packet radio to be a free usenet feed matters
not. The FCC rules mean what the FCC says they mean, not what we
think that we can imply by spin-doctoring their wording and applying
multiple rules out of context.

Some people have been likening packet BBS postings to "ROUND
TABLES" (an FCC defined term) rather than to "BULLETINS". The FCC
isn't even being inconsistant in putting them in the latter category:
in a round table, transmissions other than call-ups (CQs are an
explicit exception to the 1 way rules) are not intentionally made
unless the sender knows that there is at least one specific individual
out there, by way of his check-in, copying the transmission. A BBS
posting is totally in the blind.

The HAM radio service was not created to allow us to save a
few bucks by avoiding providers of commercial communications services.
If you want to post and read about cooking, etc., pay for a Compu$erve
account, or equivelent, or, like me, spunge off of your employer's
internet connection if he allows it. You won't convince me that the
FCC is obligated to let you do it under the auspices of your US
amateur radio license.

Jesse-- I know what happened... It happened to me..
Inside the 02AT is a small relay which switches the power from the
battery to the 12 volt input when the 12 vdc is applied.

I dropped mine, and the relay stopped working. I had to order another
one from Icom... I don't have the number, but Icom will know which one.

It is a little blue relay mounted right under the top of the HT. It is a
SPDT relay and has five contacts- 3 for the relay and 2 for the coil.

I bet that is ur problem - Good Luck 73, Dit dit

Uh. Did you type the full: telnet callsign.cs.bullalo.edu 2000
^^^^

The 2000 jumps you into port 2000, which is the callsign program.

If you leave off the "2000", you will most probably get a login prompt as
you mentioned above.

Not exactly, Jeff. A "well-built" station can refer to equipment
that is well-constructed, but I tend to think it means something
more; a well-put-together station. A station with adequate
lighting, adequate room, safely connected equipment. More than
just a transmitter and receiver.

Anyway, even when you buy equipment, it isn't the manufacturer that
is held responsible for the proper operation of the station; it is
the station licensee. In other words, the ham is always the
the one to insure the station and equipment therein, is
"well-built".

>
>Ditto for the Packet BBS system.
>
There is a difference between packet and the Internet newsgroups.
Packet is not split up into many multiple news catagories like the
Internet is. For many people out there, packet is the ONLY
BBS "network" they have access to. And some would be interested in
cookie recipes. There isn't a packet "food.recipes.cookies group,
all posts on all topics show up on a packet BBS at random, no "groups".
Imagine the Internet if there was only ONE newsgroup! Packet is set
up like a small scale Internet with only one newsgroup.

Maybe, if someone writes new packet BBS software, they could establish
"newsgroups". Like maybe: dx, mods, for_sale, wanted, help, recipes,
images, IBMPC (small 7plus-ed programs, small meaning <20K max), Mac,
debate (for those gun and such arguements), etc.

I suppose someone could "simulate" the above now by grouping posts
by the keyword in the to:<keyword>@<area>, like "images@ww, forsale@usa,
wanted@nocal, and such. You connect to this new packet BBS, it lists
all the <keywords> in all the posts that have arrived since last time
you logged in. Then you tell the BBS which <keyword> "group you
want to list. Looks a little like a newsgroup.

Anyone done this?

>>in their calls...which is supposed to be some fancy british pronunciation?
>>What does the group think?

When you have a qso on the VHF bands inside the states, then you may do ... :-)

BUT, PLEASE!! NEVER use it on the "Short Waves"!! If you believe it or not, there are thousands and thousands of HAM's who are not speacking and understanding English fluently (like me :-).

I remember a qso whith a guy from the southern part of the states very well. I had the impression he had a ciggar in his mouth, when he was speaking to me. After requesting the suffix from his calsign the third or fourth time, he got a little bit nervous (let me say it in this way :-)

Ok, I switched to fluently German and asked him for his callsign again.

<PAUSE>
"WHAAAAT???"
<PAUSE>
"Ok, my old man, my callsign is ...."

in PERFECT SPELLING!!! :-))

That's my little story about spelling callsigns. Think about it, when you have a qso with a guy from outside the state next time. :-)))

Have fun

To all Filipino ham operators:

I plan to take a trip to the Philippines next April. I was wondering if anyone had any experience getting a reciprocal license to operate there. Also, if there is a club in the Manila area that would let me operate their equipment while I'm there. I'm aware of the Philippine Amateur Radio Association. Maybe someone could tell me more about them.

Thank you in advance,
Dominic Mercado, Burbank CA

... is found on many commercial radios now. The multichannel sythesized units can be set up to send or recieve DCS or CTCSS (PL). PL us usually continous for the duration of a transmision while the DCS is a burst sent at the very begining to open the receiving unit which is held until carrier is dropped. I am told there are 170 odd codes defined.

My question is how is the DSC sent? Is it a set of tones? Nothing unusual can be heard even on a radio that lets me heard PL just fine. Is the carrier turned off and on, ah lah CW?

This is not a trunked system. All information is in the user channel.

Dear Ryan,

You don't need a user name and/or password !!

Just do it (telnet callsign.cs.buffalo.ed 2000) and don't forget the
port number 2000 !!!!!

Then you should get the message "..... Type 'help' for help"

Most repeater controllers have a code that can be sent to allow the machine to pass the DTMF on to the transmitter. Ask your owner.

If you want *her* to put it together (with your help of course),
and learn something about radio circuits at the same time, then
I'd suggest a crystal set as a starter. I posted a circuit for
a loose coupled set on .homebrew the other day that would do.
It's not at all beyond a bright 6 year old's skills or comprehension,
and would receive the local AM broadcast stations. Just build it on
a wooden board (breadboards are what were originally used), with
nails as tie points and toilet paper rolls for the coil forms.
Experiment, explore LC circuits, don't just learn to follow kit
directions.

>I saw a shortwave kit, the MFJ-8100, reviewed in Passport 95 (p. 140).
>This radio seems like it would be not unreasonable. Its only
>$60, and has shortwave. However, it does have some liabilities:

>bad Heath Kits are gone...) I guess the thing I'd really love to
>find is to get rid of the regenerative techlology and get a better
>dial. Any suggestions would be most welcome.

There are several kits available from the QRP groups that would
do for this. The 40-40 rig shown in the November QST would not
be bad, just ignore the transmitter parts and use a LC filter

instead of the narrow crystal filter shown. A kit is available
for $50. It'd be more fun to just dead bug it yourself though.
Ramsey sells a kit based on the same chip, I think it's about
$30, but some people have complained about Ramsey kit quality.
If you want FM, call Motorola and ask for their MC13135 evaluation
kit. That'll make a dandy little VHF amateur and public service
receiver, and you can't beat the price (free).

[Owing to a mishap or two, this was all that was transcribed from the VK2 WIA Broadcast:]

VK2 DIV. PRESEIDENT'S MESSAGE

This is Michael Corbin, VK2PFQ.

Again not a lot to report this week, so I'll take this opportunity to put an idea to you. What about a members forum. What's a members forum you ask, well it's simply the process whereby members are able to address council at a council meeting. It's where you can put those ideas, even criticism, before council. Most City Councils have time set aside on open council meeting nights, so that ratepayers..... usually irate ones....but not always, can put before council their thoughts, grips, opinions, on....Anything.

The rules are simple.....three minutes is allowed to put your case, no Councillor can or will answer questions and speakers are required to conduct themselves with due decorum. If you think this sort of thing has a place in Institute affairs, then please avail yourself of the opportunity at our next Council meeting. That's Friday 11th November at 7.30p.m., all members are invited to attend.

The other matter is.... those Memorandums & Articles of Association, which badly need rewriting. To this end. I am asking for volunteers. Much has been spoken in the past on these M. and As. and I would like to get their revision on the way. As with NTAC, the best way, I believe, to achieve this, is to form a Committee. Instead of picking people, I am asking for a group from amongst members, who want to help. A group who genuinely WANT to do the job....NOT a group, who have been coerced into doing the job. If you feel that you fill the bill,....then, give me a call.

You'll recall last week that I asked for someone to make their station available for Howard W6AXX. If you were not in tune last week, Howard is coming over here for a short holiday and he wants to have the use of a station for the first 24 hrs of the WW DX SSB contest. David Thompson VK2BDT has been kind enough to offer the use of his station, plus accommodation, for which I am most thankful. However, David lives in Goulburn and it might be better if we can find someone closer to home as Howard's accommodation is already booked and paid for..... nevertheless, thanks David.... keep the linear idling over... just in case.

There will be no Presidential notes next week, as I will be away in VK6.

As promised last week, I will now read an edited version, the first of four segments written by David Rankin 9VIRH/VK3QV and provided to us by John Aarsse VK4QA (pronounced AR-SAY). David prepared this information so....and I quote "that as many amateurs in Australia as possible learn of what has happened in Singapore." (at the IARU Conference)

"Good morning or good evening from Singapore.

Here is something for the numerologists... at 9 o'clock on the 9th day of the 9th month the closing meeting of the 9th IARU Region 3 Conference commenced in a country whose prefix starts with the number 9. Any translations of any possible significance, please let me know at my home QTH.

Some 95 people attended, representing 20 National Organisations, including 3 proxies, Plus the Region 3 Directors, the President, the Vice President and the Secretary from IARU Headquarters, representatives from Regions 1 and 2, the ITU, The Asia Pacific Telecommunity and a sole observer from Vietnam.

Over 107 papers were presented. Some were reports but, still, 90 odd papers needed to be discussed in three working groups, one covering purely technical matters, one regulatory items and the third dealt with suggested methods to assist fledgling amateurs in areas such as Nepal, and so on.

A conference like this, held in an exotic place is, for quite a few people, not exactly a holiday. Mr. Selvadurai, 9V1UV, from the Singapore Amateur Radio Transmitting Society was kept busy as Conference Chairman, the office staff worked round the clock and some privileged delegates and observers were kept busy on the Thursday morning while others were able to take the time off to do some shopping.

For some reason or another, I was one of the privileged observers assisting the Chairman of working group A, Terry Carrell, ZL3QL. We managed to file our report for printing with two minutes to spare!

Mr. Masayoshi Fujioka, JM1UXU, resigned as Secretary of IARU Region 3. In a private ceremony, Masa-san accepted with great joy a copy of the script of that broadcast. In the coming few weeks I will touch on a number of important decisions that have been made for Region 3, decisions that will affect the Amateur Radio Service in this region, including you, the listener.

Now a list of the newly elected directors of Region 3, in fact, they are also YOUR directors as they will represent YOU at the super top level. However, without input from you, through your Clubs or direct to your respective State Councils, they wouldn't know what is of specific concern to you.

Here are the new directors:

Mr. Fred Johnson, ZL2AMJ, who was also elected by the new Board as Chairman.
Mr. Sangat Singh, 9M2SS, re-elected
Mr. David Rankin, 9V1RH/VK3QV, re-elected.
and the new directors:
Mr. Joshiji Sekido, JJ1OEY
Mr. Park Young-Soon, HL1IFM

Unfortunately, David Wardlaw, VK3ADW, was just pipped at the post,
while Mr. Keigo Komuro, JA1KAB, did not stand for re-election.

At the same time, a choice was made between 2 contenders to host the
next Conference. Beijing was chosen as the venue for the 10th IARU
Region 3 Conference, which will be tentatively commence on Monday,
the 9th of September 1997.

The conference finished with a dinner, hosted by IARU HQ and ARRL.

73 David 9VIRH/VK3QV

Well that was Part 1 of four parts. Although I will not be here next
week I will make a recording of Part 2

See you then.

>>rfm@urth.eng.sun.com (Richard McAllister) writes:
>>
>>Show me a *commercially* built amateur transmitter/receiver for the
>>1929 ham, Rich! Just what do you think was available back then?

A lot more than you are aware of, obviously. While it is true
that hams of that era built their own transmitters as a rule, there
were indeed commercial receivers available, bought and used by hams.

According to magazine ads of that era, it would also seem that
there were many "ready-built" components available which would have
simplified construction somewhat.

Tomorrow I will post what I can find in the way of "ready-built"
equipment descriptions, which date back to the early '20s, in some
cases.

>>And even if there was one (which there wasn't), it would have been
>>up to the manufacturer, not the ham, to insure it was ``well-built''.

Better read the FCC regs again, Jeff. It is *never* up to the
manufacturer to ensure that a piece of equipment *once installed in
a station* complies with the FCC regulations for purity, stability,
etc., etc. It is *always* the responsibility of the station
licensee. The FCC does not inspect every piece of manufactured
equipment to see that it complies, it merely tests a sample and
then depends on the manufacturer to ensure that all units comply.
If your rig "gets you in trouble" with the FCC you can try filing
suit against the manufacturer (lots of luck!) and if it happens
a lot the FCC may take a closer look at the manufacturer, but in t
he final analysis it is *always* the licensee who is responsible
(that's why your station is *licensed*, to ensure that *someone*
is responsible for it).

>Not exactly, Jeff. A "well-built" station can refer to equipment
>that is well-constructed, but I tend to think it means something
>more; a well-put-together station. A station with adequate
>lighting, adequate room, safely connected equipment. More than
>just a transmitter and receiver.

Read "200 Meters and Down" for a historical perspective on this
issue. The problem in those days was that a lot of the wonderful,
homebuilt stations Jeff is crowing about had *abominable* signals:

Chirp, drift, lots of AC modulation (from using raw AC on the plates), out of band (very common in those days), etc. All of which made the amateurs look like - well, amateurs! ARRL was so concerned about the public image this created (by the way, BCI was a *real* nuisance then, as bad or worse then the worst days of TVI in the '50s) that a lot of effort was put into getting hams to "clean up their act." Had that not been done, the support that the U.S. Government had always given to protecting amateur frequency allocations at the international conferences (where most of the rest of the world wanted to ban amateur radio once and for all) might have dwindled and we might all be talking on the Internet instead of the radio. :-) As it turned out, amateurs did finally clean up their signal quality and operating habits (some very grudgingly, BTW) but even so, retaining amateur allocations always has been (and still is) a close-run thing.

>Anyway, even when you buy equipment, it isn't the manufacturer that
>is held responsible for the proper operation of the station; it is
>the station licensee. In other words, the ham is always the
>the one to insure the station and equipment therein, is
>"well-built".

Correct.

One final note: It was in the 'teens that "amateur wireless" began to take on a distictly different character, from "wireless experimenters" to "wireless communicators." In other words, the enthusiasts were more interested in communicating on the radio than just tinkering with it. This is what led HPM to form the ARRL and establish the first nationwide trunk lines. It was a fortuitous move, because had that not happened and the aspect of "amateur radio as a public service medium" never developed, there is little doubt that the U.S. Government, tired of amateur wireless interference to commercial and government interests and seeing no "saving grace" to the hobby but merely a bunch of obnoxious, unorganized attic tinkerers, would not have supported amateur frequency allocations at the international conferences and amateur radio would hve been banned.

Remember that, even in the 1920s, many European countries would not allow their amateurs to communicate with other countries. One Swiss ham had his license cancelled, his station confiscated, and all his logbooks, notes, correspondence and postcards (the forerunners of the modern QSL card) conficated because he had contacts with other countries.

Following up on questions of fast speed copy:

When my wife and I met she had just completed U.S. Army Security Agency (now INSCOM--Intelligence and Security Command) morse intercept operator (and special identification techniques operator) training. They learned by the already discussed hear a character-strike a key method. She, and the other morse ops I knew, did literally just as described: the actual copy was a semi-automatic response. They never tried to "read" the copy as such, whether it was text (which was often in a foreign language anyway) or code groups. Code groups could be copied faster for two reasons:

1-the pattern of X number of characters followed by a space took out a major barrier of plain text copy: the op never had to decide where the end of a "word" occurred; every four (or five, rarely other groupings) letters was _always_ followed by a space. Made the "automatic" copy even more automatic, so-to-speak.

2-the numbers in these code groups were nearly always in a form called "cut numbers". That is, a lot of copy consisted solely of number groups. Since no letters were involved (except perhaps in the message header information), the sender dropped the "long" portion of the number. This makes a "dit" for one, "di-dit" a two, "dah" a six, and so on. The ops _loved_ this kind of copy: the messages generally went on for a LONG time and the ops could virtually sleep while they copied it!

Years later, when my wife and I got tired of just listening and when about getting licensed, Dawn copied 20 wpm right out of the chute. Still not fond of morse operations, partly I think because she almost always has to write/type out the characters as they come along, and read afterwards. I'm sure she could go much higher in speed as long as the keyboard could keep up, but she's just not interested.

Me? Being the analytical type, I took forever to pass 5 wpm for my novice. It seems like forever since I took the old tech (classic) test with me working on again/off again on the code. I'm currently on again, with some encouragement from Howard Lester out in AZ-land (thanks Howard!).

So, if you hear a shakey N5RCK on the novice bands, please be kind. What was that Q-signal for please go slow?? :-)

Cheers & 73

Hi,

I have got the hint, that the progy "LOGIC" will be the ultimative
loggbook progy, but no info about where I can get it?

Any recommendations?

Ed, this is excellent! You just answered my questions "to
a T." Now I understand how intercept operators can copy groups
so fast; in effect, they "know something about what's coming."

Now, let's imagine a scenario where the coded groups consist
of mixed letters, numbers, and punctuation; in other words, there
are no "keys" to help in "knowing what may come next." What
does your wife feel is a maximum speed for an average operator
under these conditions?

You can see where this is leading; in the absence of some
kind of "tip-off", perhaps even using groups of varying length
as well, can an operator copy those random characters at very
high speeds? Or are high speed operators subconsciously "reading"
high speed text as words and not just translating charcters?

Perhaps another good test would be to send text *in a foreign language*
at high speeds and see how well an English-speaking only operator
can copy.

In "Fifty Years of ARRL" there is a discussion of a "trick
qualifying run" sent many years ago by W1AW which conisted of
random gobbledygook (mixed words, letters, abbreviations, prosigns,
groups, punctuation, etc.) and even the *best* operators were only
able to achieve about 95% copy at *20* WPM.

>most of the time, because it's an automatic broadcast.
>But then such is life....
>Peter, KC1QF.
>

Isn't this illegal? I once heard an XU that had half of Europe and North America calling him, and that broadcast started up on 14275 completely wiping his signal out. There's no way that the pileup couldn't be heard, from most places on our planet!

The thing that irritated me the most was that the broadcast included words to the effect that if other stations were heard on the frequency while the broadcast was being made, that the offending stations be reported to the FCC!!!

Aren't there laws against making automated broadcasts? I thought that the FCC rules stated that "nobody owns a frequency", and that no transmissions should be made before checking that the frequency was in use?

I would appreciate anyone else's opinions on this.

73, Scott

1327. Exploring the Internet (QST)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-26 18:28:12 UTC
From: scotte@ccs.neu.edu
Message-ID: <38m73s$jut@narnia.ccs.neu.edu>
Source record: 257886
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.scanner,rec.radio.shortwave

Greetings!

I have written a published article in the ham radio magazine QST
(published by the American Radio Relay League) on ham radio and the
Internet. The whole series is called "Exploring The Internet-Part x"
where 'x' is one of the parts shown below:

Part 1 (written by Steve Ford, my editor) specifically discusses what the
Internet is. This was in the September 1994 issue.

Part 2 (also written by Steve ford) describes what the ARRL has to offer.
This was in the October 1994 issue.

Parts 3 and 4 (both written by me, Scott Ehrlich) discuss some of the
TCP/IP commands which can be used, with an emphasis on accessing ham radio
information.
Part 3 is in the November 1994 issue (just coming out now), and part 4
will be in the upcoming December 1994 issue.

If you miss the series, don't have access to QST, or simply want
reprints, here is the information (provided by Steve Ford):

Article copies are $3 per article. The contact person is:

: That said, IANAL, so maybe I'm full of crap. :)

What 'One Way' bulletins??? What this idiot OO forgets is the each and every
'transmission' is a two way, point to point, ham to ham communication.
I sent the message to my local BBS (point to point) - it sends it to a ham
that requests it (point to point again). Where's the broadcasting? Where's
the "one way" transmission? That what the FCC regulates, anyhow. Are they
saying I can't put an open letter or editorial on packet since the subject
matter doesn't involve RF or electrons? I don't think so. Since only hams
can access the messages via a pt-pt connection, there's no broadcasting.
If they want to limit content, go after the "last operation/what I had for
breakfast" OF's.

IM>To my knowledge your desire is downright illegal.
IM>try rec.radio.criminal!

Not true.. There are some VERY short range Ramsey kits that transmit less than the FCC has a say over.. It's not iligeal, yet it's not legal. You can transmit on almost any freq. as long as it's under one tenth of a watt.(PLEASE don't quote me..) It's an FM transmitter meant for college radio stations, etc. You know those corny mikes you buy that you tunr on a radio nearby to 88.5 and your voice goes over the radio? Same deal.

1332. Popular 75 meter "Piss and Moan" Net to return?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-26 20:21:24 UTC
From: mc@shore.net
Message-ID: <38mdo4$7nf@shore.shore.net>
Source record: 257963

It would appear the popular 75 meter Sunday night "Piss and Moan Net" is about to return to the airwaves. Last Sunday, October 23rd at approximately 2300Z on 3.885, Net Control Station WA1HLR, Tim called the Piss and Moan Net to order and requested check-ins. There were approximately seven stations checking in, and the net ran for about an hour. The Piss and Moan Net was a popular 75 Meter AM diversion several years ago on Sunday evenings and it was really different from the nets we all know and used to participate in when we were Johnnie Novices way back when. The Piss and Moan Net was a total parody of these and many of us found it highly entertaining. Stations checking in were asked for an informal transmission, called "your pissing and moanings please!" and were expected to complain about something they found worthy of complaint, criticism and just plain bad mouthing!

Net Manager appears to be WA1HLR, Timothy "The Timtron" Smith of Skowhegan ME. But those of us who know Tim also know that while out of the state working, he lost his home and most of his "stuff" in May of 1992 to a disasterous fire of rather suspicious origin. Since then, he's been spending a lot of time in Syracuse NY working on contract rebuilding old broadcast transmitters. He is relegated to the "just a piss weak little mobile" status or working from the "Piss Weak Hotel". However, last Sunday he was back in Maine for a few short days installing a WHQO's new FM transmitter on his hilltop. By coincidence I had to go to a collector show in Saco ME and this means I had to go to Freeport (Wife loves L.L.Bean!) Skowtown isn't much farther and we hadn't been up to see Tim this year and we arrived right as he was doing the first Piss and Moan Net in years. It is from this vantage point I write this report, sitting in his school bus temporary home on top if Henry Nyellar Mountain in Central Maine.

Callsigns of stations checking in will be omitted for decorum, but the net was lively and animated. The "pissings and moanings" informals ranged from graduated income taxes in Massachusetts to the lack of syncronization of traffic lights to a condemnation of Senator Edward Kennedy.
During the course of his monologs, Tim told the assembled net that he was hoping that other stations might take the initiative and call up the Net if no one else did; due to his work schedule we would be unable to do this indefinitely. So only time will tell whether or not this will happen, but if you're around your radio on Sunday eveningh this winter, tune around and see if its on. You must have a sense of humor and be forewarned here and now: Not suitable for family or newbie entertainment!
Its a good show!

Enjoy!

> Ed, this is excellent! You just answered my questions "to
> a T." Now I understand how intercept operators can copy groups
> so fast; in effect, they "know something about what's coming."

From what I have been able to find out talking with the OT's I have run across, as well as the commercial/navy/uscg types I have met, it seems that copying code groups or coded messages not in groups is relatively easy if you stick to a certain format such as automatic 5 groups per line. That was a message counting trick in the old days for quick word counts. I learned it back about 20 years in the army mars CW nets.

The intercept ops or the navy ops that had to copy long blurbs on the mill, quite literally did not know what was going through, in a conversational sense, but just let the fingers do the walking. It takes a lot of practice to separate the conversational from the mechanical, and I have a hell of a time with it, but it seems to demand that the operator develop the ancient art of copying behind. I am trying like hell to get it to the point of copying a line behind at a time (5 groups), then bang like hell on the mill to fill up the line as the next one comes in. That seems to work reasonably well up to where my typing skills throw me off. My guess is that the faster the typing skill at 100%, the faster the intercept or conversational mill copy, regardless of the content. Strange figures or punctuation always slow things down a little, including such things as umlauted characters or odd punctuation such as dollar signs, apostrophes, double quotes, open/closing parens (they are not the same), etc., not normally encountered. If typing skills are not problem, then each operator maxes out at a wall, beyond which only dreams go....

You really don't know what is coming, but you know that you have to group it to have it count. Hence, the automatic response for a carriage return after 5 groups. I find that to be quite helpful in copying high speed text on a mill, as for example wx or px from wcc or wlo or nmn. Most of that goes by at 30 wpm, it seems, and pushes the limit of my touch-typing skills (I am a touch typist but with only a 95% accuracy --- that last nickle kills my copy at speed). Also, in routine text, anytime a period is sent, that is an automatic

carriage return for good copy. It helps to shape up the text for
both readibility and quick counts (although a 5 group line throughout
is easiest to count).

> of mixed letters, numbers, and punctuation; in other words, there
> are no "keys" to help in "knowing what may come next." What
> does your wife feel is a maximum speed for an average operator
> under these conditions?

I don't know what his wife would find reasonable for speed, but, in
my opinion, it can be rather high, depending upon the operator skills.
A good operator can go as fast as his typing skills. I hear a lot
of commercial traffic going at 30-40 wpm on the marine bands. These
guys don't copy by hand, but by mill (or computer). My best estimate
is that the speed of the operator on a mill for generalized copy
tops out at about 5-10wpm below the slowest of 1) the typing speed
for 100% correct copy or 2) the receiving speed if a good typist.
I would expect that 40-45 wpm was a rather common group copy speed.
You might be able to squeeze a bit more out for code groups of fixed
format and style. It is interesting that code groups, in testing,
are sent at 5wpm slower than clear text, as far as commercial exams.
In reality, the code groups are easier to copy in a continuous
stream, with non-conversational mode invoked. Remember the stories
about the ol' boys on the telegraph reading a book, drinking coffee,
smoking a cigar, and holding a conversation to boot! There are folks
that can do that. My OM was a commercial sparks for over 30 years and a
ham off and on for 70. He could do most of that kind of thing. As a
newbie novice, it continued to amaze the dickens out of me how in the
world he could rattle along at speed on the bug (30wpm or better) with a
bunch of the ol' CW farts from the spark days, drink a coke or a cup of
coffee, and talk to me in a reasonable manner. He did that up through
his 70's. As hearing and time took its toll in his 80's he had to
begin to concentrate on one function of the group and turn up the
hearing aid.

A good operator can go in conversational mode at 50/60 wpm with relative
ease. There are a lot of the CFO boys with their computer keyboards
that run amok on 80/40 at 50 wpm or so. Conversationally, it is easy
to get beyond 40 wpm, and not comfortable until beyond 30 wpm. The mind
goes entirely fast enough to make the body be the limiting factor (ears,
hearing loss with age, finger/typing acuity, etc.). I am a dedicated
bug man, and try to not use a keyer unless I have to. I will, on occasion
use a keyboard. If on the bug, there are practical maximums that one
just can't go beyond and maintain any sort of resemblance to reasonable
and readable code. That is about 45 wpm. At 50 wpm, most ops on a bug
just fall apart, unless they have been around for a long, long time.
I would expect that motor skills, brain neuron paths, or other such
biochemically/physiologically related functions are at the root of it.
I am not a medicine man, so I am a bit out on a limb with a saw, here.
Those are my observations over the years.

If you want to go fast, conversationally, you MUST develop a good working CW word vocabulary. You cannot do it otherwise (although I would be more than happy to QSO someone doing it and eat those words!). Phrases are also required, at speed. The working vocabulary of conversational morse is where my experiences tell me that most folks hit the dreaded plateau and max out. The ears can usually hear a lot faster than you consciencously think. The conversion process from the ears into meaning, through the grey matter is where the bottleneck usually seems to be. If you have to consciously think about it, it has left you in the dust.

I have noticed that there is a slight appearance of a correlation in my observations (none scientific, so don't flame me too fiercely), that would suggest that those with good musical skills/abilities can handle things like code, more easily than those without same. I would think that would suggest some relationship with brain function.

> You can see where this is leading; in the absence of some
> kind of "tip-off", perhaps even using groups of varying length
> as well, can an operator copy those random characters at very
> high speeds? Or are high speed operators subconsciously "reading"
> high speed text as words and not just translating charcters?

In my opinion, it has to do with developing a word vocabulary at speed for conversational copy at high speed. Yes, you can read the mill copy by ear at speed as the mill is running, but you can't hear by letter. At that rate you must hear by word, phrase, or line to get good copy and mill copy at the same time. The additional time your mind is perusing the copy, actually slows you down just a hair (or for some folks, a lot).

> Perhaps another good test would be to send text *in a foreign language*
> at high speeds and see how well an English-speaking only operator
> can copy.

Agreed, or something mundane like the wx bulletins from wlo or the notices to mariners from nmn. It is fun to try to mill copy what little spanish traffic goes by (there used to be some spanish CW broadcasts from somewhere up until a year or so ago). That would tend to stretch the copying ability, especially if you did not know spanish nor the spanish extensions to the morse code. On the standardized copy for things like wx or px or notices to mariners, they all have a very well structured style and format. Once one learns the particular style and format, then one can copy it much faster than if it was just new unknown format text. There are some rather unfamiliar codings in things like notices to mariners that one needs to learn before it makes much sense. Once learned, then the copy flows rather easily, because you have a much clearer expectation of what will follow in a generalized style. Maybe pages out of the Encyclopaedia Britannica, on such exalted subjects as pure logic or somesuch should be the CW speed testing topic of choice, or what about Latin..... (:+}}.....

> In "Fifty Years of ARRL" there is a discussion of a "trick
> qualifying run" sent many years ago by W1AW which conisted of
> random gobbledygook (mixed words, letters, abbreviations, prosigns,
> groups, punctuation, etc.) and even the *best* operators were only
> able to achieve about 95% copy at *20* WPM.

My guess here is that the ops were trying to read into the copy in a
conversational mode and getting blown away when it was gobbledygook
rather than Ben's best bread. That would not have phased an intercept
or ol' navy op in the least, since gobbledygook was the run of the mill
mostly. Stopping to think about ``Gee, what was that gobbldygook? Was
it &^%f(4d or ^nc8455???'' can really slow you down in continuous copy.
If the copy counts, the rule is, ``COPY FIRST AND THINK ABOUT IT SECOND.''

I would love to join the boys on CW. Pick a QRG and let's go.
Round up any of the others that might be interesed, e.g. Ed.
7027R5 is fine usually, although if you can opt to make it down a bit
to 7022R5, that is usually clearer. The way 80 is picking up recently
would make 3527R5 a good QRG for QSW/QSX/QSO. QRV?

> ... is found on many commercial radios now. The multichannel sythesized units
> can be set up to send or recieve DCS or CTCSS (PL). PL us usually continous
> for the duration of a transmision while the DCS is a burst sent at the very

Not quite. DCS (a.k.a Digital Private Line, aka Digital Channel Guard, etc.) is continuously sent- most decoders employ a closure delay of +/- 200ms since the code is occassionally lost- or the tx station runs out of range temporarily. Sending only a burst wont work with Motorola, GE, or Comm Spec. stuff- it all relies on continual code to keep the activity output line active.

> begining to open the receiving unit which is held until carrier is dropped. I
> am told there are 170 odd codes defined.

Comm Spec sez 512 Octal codes .... where's my math???

>
> My question is how is the DSC sent? Is it a set of tones? Nothing
> unusual can be heard even on a radio that lets me heard PL just fine. Is the
> carrier turned off and on, ah lah CW?

DCS is really similar to PL on qualudes, it is a subaudible base tone (what is it 100-125hz, I forget) that in turn is phase modulated with the digital code "word". It is an offshoot of an old paging style (reallllll. old, I think It's equivilant of 150kb/s or less).
The response time is quicker than most (especially older reed-style) CTCSS encoders/decoders: less than 200ms decode time, and they employ a standard "turn-off" code (the base 100+/- hz tone) which is sent at the end of a PTT cycle- thereby clamping the receiver's detector before the tx station unkeys- giving a nice "click" to the end of a transmission rather than the always-annowing "kerissshhhh" that some carrier-squelch units send to the speaker before re-muting (or for that matter an old-style PL decoder, with encoding radios failing to send the out-of-phase PL tone at the end of their transmissions- e.g. Motorola Micor/Motrac and older stuff).

Since its a little lower in freq than PL (at least most of us run PL tones above 100hz so the response time is <400ms) and since the decoders only need around 400hz of deviation- DPL is harder to "hear" with the human ear than is PL- but if you crank the audio gain on a receiver without a hi-pass filter you should hear the rapid "clik-clik-cliks".

Better yet, turn on a service monitor- and you should see some really neat wave forms :-)

ARLB086 FCC recip update

ZCZC AG51
QST de W1AW
ARRL Bulletin 86 ARLB086
From ARRL Headquarters
Newington CT October 26, 1994
To all radio amateurs

SB QST ARL ARLB086
ARLB086 FCC recip update

The FCC announced today the termination of a proceeding, PR Docket 92-167, in which it was proposed that Volunteer Examiners inspect credentials and administer brief examinations to visiting foreign amateurs as a basis for the granting of temporary FCC operating permits to amateurs from countries with which the United States does not have a reciprocal operating agreement.

In its comments on the FCC proposal, filed in 1992, the ARRL had said there were better ways to achieve the objective of the proceeding. The League suggested that the US take the lead in establishing a worldwide common license and urged the FCC to abandon its proposal and consider alternative steps leading in that direction, such as US participation in a European common license arrangement.

The FCC decided not to amend the rules as it had proposed. Instead, it has noted the suggestions in the comments for alternative means of licensing visiting foreign amateurs, and will continue to explore other options for meeting this need and will work to ensure the reciprocal treatment of US amateurs overseas.

1338. Re: Looking for Mac Logging Programs

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-26 21:52:46 UTC
From: slay@netcom.com
Message-ID: <slayCyAvGC.HCx@netcom.com>
Source record: 257880

: I'm been looking for Mac logging programs and to date have only found
: MacContest in my internet wanderings. Unfortunately, the program crashes on
: a IIfx and A Quadra 700 so I'm back to square one. Does anyone know of any
: logging programs (contest and/or non-contest - freeware, shareware, or
: commercial products) that are more robust than MacContest.

For us Mac-weenies, our prayers have been answered by Kevin N0IOS.
Kevin has just completed another release of his MARATHON for Macintosh
contest logging software.. It's very good ..... but I'm biased and
besides ..... there's nothing else out there. In addition to the
major contests like: SS, CQ WW, CQ WPX, IARU, FD, ARRL DX, All Asian,
ARRL 10m, ARRL and CQ RTTY contests ..... he's also included a new
"Generic" contest ..... I suggest you contact him at:

MARATHON SOFTWARE
Kevin Krueger - N0IOS
1780 Ruth Street
Saint Paul, MN 55109

Kevin can also be found lurking in cyberspace on the Internet. Hopefully,
he'll see you posting and respond as well. BTW - Kevin also wrote the
Host Master for Macintosh software that I (and many others) use with our
Kantronics TNCs ..... it's pretty slick too.

Cheers
Sandy WA6BXH/7J1ABV
slay@netcom.com

PS: I am an unabashed supporter of Kevin's efforts and would LOVE to see
more good amateur radio applications for the Macintosh from him and/or
anyone else.

Joe-

With me, Ham Radio was the reason I dropped out of Scouting. If I had been introduced to Ham Radio through Scouting, it might have provided the incentive to stay with it and progress through Eagle. I don't think they had JOTA back then. As it was, I went through a transition at age 14, from Junior High School and Scouting, to High School and Ham Radio.

As far as the interference is concerned, the fact that we are discussing it, is proof that the perpetrators were successful. These guys are there all the time, on most of the HF bands. They may not have planned to interfere with JOTA, but certainly took advantage of the opportunity. Just as we do our DX or Rag-Chewing "thing", they do their gross interference thing.

Further, we discuss it here in what you might think is a "gentleperson's forum", but may find that some people wwill pounce on us with great enthuasism, chastising us for encouraging such activities on the crowded bands, et cetera. In other words, such people are everywhere. They are us, too!

Why are people like that? What is the solution? Are there any good psychologists out there? One thing that I believe can be done, is for all who are trying to use the Ham Bands, to COMPLETELY ignore the harrassment. The emotional responses that we provide to the taunting, is the goal they are after. Unfortunately, it will take a LOT of preaching at our level to convince people to pretend they don't hear. We are just too emotional. We CAN'T ignore it! Yet, that may be the only way to reduce the harrassing activity. These people are playing a game, and will only cease when no one will play with them.

>Show me a *commercially* built amateur transmitter/receiver for the
>1929 ham, Rich! Just what do you think was available back then?

There was commercial gear around. Might not have been labeled "for amateurs"
but it was adaptable to amateur use. Show me that you've done exhaustive
research and found that NO ham in '29 used any commercial equipment in his
station. Hams have always been scroungers as much as builders.

>And even if there was one (which there wasn't), it would have been
>up to the manufacturer, not the ham, to insure it was ``well-built''.

Nonsense. That wasn't true then and it isn't true today either. Lots of
junky commercial gear out there. It's the ham's responsiblity to evaluate
and select the proper components, no matter what size they are -- resistors
to transceivers, and to operate them within their limitations.

Rich

ARLB087 Texas flood update

ZCZC AG52
QST de W1AW
ARRL Bulletin 87 ARLB087
From ARRL Headquarters
Newington CT October 26, 1994
To all radio amateurs

SB QST ARL ARLB087
ARLB087 Texas flood update

As Texans recover from last week's flooding, the Amateur Radio response to this disaster continues. 7180 kHz has been a central frequency during the day for handling Health and Welfare messages into and out of the stricken areas of Southern and Northern Texas. Also, the coordination of disaster relief supplies is also taking place on 7180 kHz. In the evening, on-air activity shifts to 3873 kHz.

The 7290 Traffic Net on 7290 kHz, the Texas CW Traffic Net on 3643 kHz, and the Texas Traffic Net on 3873 kHz are providing support along with the National Traffic System. When checking into these nets, please follow the Net Control Station's direction. A clear frequency would be appreciated.

Thanks to North Texas Section Traffic Manager Bernard Aderholt, KJ5GE, and Ray Taylor, N5NAV, for this information.

IJ>I am trying to find out if there is such a thing as a Motorola User Group
IJ>-- you know, hams who use Motorola gear, etc...

I understand that the Motorola plant in Ft. Lauderdale, has its own Ham club with 2 Meter repeater. I don't know if they are on Internet, though. They used to have a periodic "Flea Market" on the company parking lot.

I understand that the radio used by the Astronauts for the "SAREX" experiment, is from the Ft. Lauderdale Motorola plant. Of course, it is probably quite customized!

Evan-

I was waiting for the weekend, so I could go get the new radio, when I read a review here. The article was quite complimentary of the TH-79, and even included details on how to expand its coverage.

However, there was one shortcoming that stopped me from even considering the radio: the report indicated that it does not have "lock-out" capability for scanning. This feature was supposed to be claimed on the flyer from Kenwood, but wasn't mentioned in the owner's manual.

There was a rumor that Kenwood had been made aware of this shortcoming, and was considering a modification. If they did, I'd plan an immediate trip to the nearest Ham store! However, it has been a couple of months now, and no further word.

Does anyone have an update? Can anyone verify the report of the missing lock-out feature?

Tboza-

I don't think you can win this one with a direct attact! As you suspect, you might win the battle but lose the war.

I believe the best approach will be to determine that the interference is strong enough to exceed some FCC limit, and let someone else do the "dirty work". You stay out of it.

It would be a lot easier to resolve if you weren't the only one being bothered. Can it be shown that these lights interfere with other TV sets in the neighborhood? I think the fifth harmonic, 70 MHz, is somewhere around channel 5 or 6. The seventh harmonic is in the FM Broadcast band. If the local power company were asked to track down "power line" interference, they might be able to take care of it, even if they had to call the FCC.

Could you show that these lights were interfering with a nearby FAA control tower? (Eighth and ninth harmonics are in aircraft band.) This would have the most serious possible consequence. Just be sure your Ham rig doesn't have the same problem!

You mention that there may have been previous interference problems between your Ham rig and this neighbor's electronic appliances. Could it be that they caused the interfering signal on purpose? Just as you used a receiver to find it, they may have used one to determine your favorite band. If so, the war has already begun.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 OCTOBER AND FORECAST FOR 27 OCTOBER - 29 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 93/38

GOES satellite data for 25 Oct
Daily Proton Fluence >1 MeV: 4.2E+05
Daily Proton Fluence >10 MeV: 5.4E+04
Daily Electron Fluence >2 MeV: 3.7E+08 (moderate)
X-ray background: B1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Oct 28 Oct 29 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Oct: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 25 Oct
Learmonth 7 3222 2121
Fredericksburg 8 8
Planetary 12 11

Observed Kp for 25 Oct: 2442 2122
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Oct 22 Quiet to unsettled initially, possible active to
minor storm levels late in the UT day.
28 Oct 20 Unsettled to active
29 Oct 15 Unsettled to active
COMMENT: disturbances are expected late today due to a small
flare on the 25th.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Oct normal normal-fair normal-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Oct normal normal-fair normal-fair
28 Oct normal normal-fair fair
29 Oct normal normal-fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
26 Oct 7 about 10 to 15% below predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
27 Oct 5 10 to 15% below predicted monthly values
28 Oct 5 10 to 15% below predicted monthly values
29 Oct 5 10 to 15% below predicted monthly values
COMMENT: slightly depressed conditions are persisting at Sydney.
Townsville were near predicted values yesterday.
Degraded conditions may be experienced on 28th due to a recent solar
flare.

First, that would by copyright infringment. Second, I want people to
actually read the article in the magazine or as a reprint. There are
some nice examples and sidebars you would be missing if it were posted here.

Neither I nor anyone else can stop someone from doing this, but I
certainly won't.

Believe me. The series is worth reading in the magazine or in reprint form.
The responses I've already received have proven that point.

73,
Scott

>
>What makes you think this isn't legal?

The 10-minute ID is what I had in mind, Dana. But I still wouldn't test
the FCC regarding this. Along these lines:

Here's a cute anecdote provided by Chuck K5FO: During the late 50's,
the phrase `Shave and a haircut - two bits'' became popular on
either the broadcast AM radio or TV (might have been a commercial).
Hams started using the first part (. ... .) in place of CQ on
HF. Another station hearing the psudo-CQ would answer with the
``two bits'' part: . . and the QSO would then take off. This
got very popular with US hams but the FCC took a dim view of it
and started handing out lots of pink slips. The dit dit is still
retained on HF today - you'll hear a CW op end a QSO with that.

Why would the FCC not like the . ... . / . . exchange in
place of CQ and the proper response? Only recognized prosigns
are to be used on CW. Thus, I wouldn't test the FCC regarding
sending an A or N or T in place of 1 or 6 or 0, respectively,
with regard to a callsign exchange.

I think that older Ham has entirely too much time on his hands.

The local FCC office once cited a commercial outfit for identifying
as K-A-B-nine, when their callsign was KAB0009. They changed to using
K-A-B-triple-oh-nine and were not cited again. I suspect that if the
monitoring station can figure it out, it's all right.

>got very popular with US hams but the FCC took a dim view of it
>and started handing out lots of pink slips. The dit dit is still
>retained on HF today - you'll hear a CW op end a QSO with that.

Some CW ops do that; I admit I'm still liable to toss out a couple
of dits after concluding a CW contact. Oh, by the way, I am a
CW op, you know.

>Why would the FCC not like the . ... . / . . exchange in
>place of CQ and the proper response? Only recognized prosigns
>are to be used on CW. Thus, I wouldn't test the FCC regarding
>sending an A or N or T in place of 1 or 6 or 0, respectively,
>with regard to a callsign exchange.

Please cite the section of Part 97 which states that only recognized
prosigns may be used. Certainly, a complete callsign must be used
for identification, but an abbreviation may be used in passing
the baton back and forth. Any other abbreviation may be used as
long as the intention is not to obscure the content of the message.
There's enough misinformation going around, even at the FCC.
Please take a moment and research the basis for your "pro signs
only" statement. I'd like to see it.

By the way, the 1950s was 40 years ago. Part 97 has changed
considerably since then. Part 97 allows one way transmissions
intended to establish a contact but does not specify which CW
character to use. See part 9797.111(b)(2). There's no mention
of permissitted pro-signs for this purpose. I don't think you'd
get a pink slip for this today, especially if the use was common
and could not be construed to be a code or cipher.

I remember the Century Net from the late 1970s on 75. It seems they meet
to make lists to help stations "work" each other on 75, mainly for 5BWAS
purposes. I checked in a few times back then (portable W1 VT) and always
was called. Worked a W7 in NV on 75 that night - havn't done it since!
Don't remember whether they issued their own "wallpaper" back then but
they probably do now.

Not necessarily...

I bought myself a manual for the Syntor. True, its frequencies are set up in a PROM, but it appears fairly easy to hack. I have toyed with the idea of building a new control head for one of these. You see, all you have to do, is to present the right binary digits on the right lines at the right times. An 8748 type microcontroller can do this as easily as a PROM. Add a 2-line LCD display module and a rotary switch and you're back in business!

The only work involved is the laborious task of making the binary value to synthesiser output frequency tables...:-)

73,
Peter

PS: I have often considered buying one of the Syntors. They're about $175 from a used equipment dealer. They're a bit big, but they're built to last, and tougher than any ham rig. I actually prefer fewer dials and buttons on the rig...channel, squelch and volume are all I want.

What worked for me (ages ago) was having friends learning at the same time. We'ld rig up a key and an oscillator and send to each other. Passages out of a book or out of RadCom (the RSGB journal).

The RSGB also ran, and still do, slow morse transmissions.

There's nothing like trying to copy real morse.

Date: 1994-10-27 13:54:04 UTC
From: jwdxt@csn.org
Message-ID: <CyC3y4.LBC@csn.org>
Source record: 257828

Michael Crestohl (mc@shore.net) wrote:
: It would appear the popular 75 meter Sunday night "Piss and Moan Net" is
: about to return to the airwaves. Last Sunday, October 23rd at approximately
: 2300Z on 3.885, Net Control Station WA1HLR, Tim called the Piss and Moan
: Net to order and requested check-ins. There were approximately seven
: stations checking in, and the net ran for about an hour. The Piss and Moan
: Net was a popular 75 Meter AM diversion several years ago on Sunday evenings
: and it was really different from the nets we all know and used to participate
: in when we were Johnnie Novices way back when. The Piss and Moan Net was
: a total parody of these and many of us found it highly entertaining. Stations
: checking in were asked for an informal transmission, called "your pissing
: and moanings please!" and were expected to complain about something they
: found worthy of complaint, criticism and just plain bad mouthing!

: Net Manager appears to be WA1HLR, Timothy "The Timtron" Smith of Skowhegan
: ME. But those of us who know Tim also know that while out of the state
: working, he lost his home and most of his "stuff" in May of 1992 to a
: disasterous fire of rather suspicious origin. Since then, he's been
: spending a lot of time in Syracuse NY working on contract rebuilding old
: broadcast transmitters. He is relegated to the "just a piss weak little
: mobile" status or working from the "Piss Weak Hotel". However, last Sunday
: he was back in Maine for a few short days installing a WHQO's new
: FM transmitter on his hilltop. By coincidence I had to go to a collector
: show in Saco ME and this means I had to go to Freeport (Wife loves L.L.Bean!)
: Skowtown isn't much farther and we hadn't been up to see Tim this year
: and we arrived right as he was doing the first Piss and Moan Net in years.
: It is from this vantage point I write this report, sitting in his school
: bus temporary home on top if Henry Nyellar Mountain in Central Maine.

: Callsigns of stations checking in will be omitted for decorum, but the
: net was lively and animated. The "pissings and moanings" informals ranged
: from graduated income taxes in Massachusetts to the lack of syncronization
: of traffic lights to a condemnation of Senator Edward Kennedy.
: During the course of his monologs, Tim told the assembled net that he was
: hoping that other stations might take the initiative and call up the Net
: if no one else did; due to his work schedule we would be unable to do this
: indefinitely. So only time will tell whether or not this will happen,
: but if you're around your radio on Sunday eveningh this winter, tune around
: and see if its on. You must have a sense of humor and be forewarned
: here and now: Not suitable for family or newbie entertainment!
: Its a good show!

: Enjoy!

: Michael Crestohl KH6KD/W1

Not to nitpick, but how is it that it is "not suitable for family", yet suitable for amateur radio? Being a newbie, I thought the rules on this were fairly straightforward when I took my test.

>Lawrenceville, GA 30244 | |

Many of us, myself included, are guilty of not using correct phonetics on
SSB. I, for instance, use Whiskey Baker nine Victor Germany Japan, when
I should use Whiskey Bravo nine Victoria Golf Juliet. However, I believe
my phonetics are understandable and reasonable.

Many folks like to use what they consider humorous phonetics: at one time
I considered Whiskey Baker nine Very Green Jungle (it worked great in a
couple of DXpeditioin pileups). But, the reason for using phonetics is to
make our callsigns easily understandable. Cutsie phonetics are difficult
for many folks to understand, especially those in other countries not fluent
in English.

I would definitely not choose to use something like double pq, whatever. It
would only result in many misinterpretations of a callsign (it is not very
pleasant getting a QSL card returned from a DX contact you need for a new
country with a note "not in the log"). I can think of only one other
phonetic practice worse than this for the person trying to copy the callsign:
The practice of using the letter plus the phonetic.

The call is W Whiskey B Baker nine V Victor G Germany J Japan

Why? Well, for those of use experienced in phone operation, especially with DX operation, it is a reflexive operation to pick up the very first sound (word) as the letter of the call, e.g., the ear hears the sound Whiskey and the hand automatically writes W, just like copying CW becomes a reflex. But, when one uses the letter followed by the phonetic, the rhythm is broken, the brain hesitates and the letter, and usually the callsign, is lost. It is very confusing and frustrating. I hate it when folks do it that way.

So, to make life easy for others, please try to avoid cutsie phonetics and follow accepted, standard practices. It can only make phone operation better for us all.

73,

John, WB9VGJ (Whiskey Bravo nine Victoria Golf Juliet)

1379. Re: The (1929) Amateur Code

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-27 14:31:08 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.783268268@melpar>
Source record: 257832
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Some follow-up notes:

1) The "Amateurs's Code" was written in 1928, not 1929, by Paul M. Segal, 9EEA (later W9EEA), ARRL General Counsel. He was also Assistant Generl Counsel to the Federal Radio Commission in 1929-30 and Director of the Rocky Mountain Division.

2) My reference yesterday to the Swiss amateur who had his station, etc., confiscated was in error; it was *ten* Swiss amateurs who endured this fate in 1926 for "working DX."

3) Equipment for sale to hams in the U.S. in the '20s included the following:

1926 - Grebe CR-18 receiver with coils for 200, 80, 40, 20 & 10

1926 - American Sales CW/phone transmitter

1927 - Pamco shortwave receiver

1927 - Ansco transmitters, "5 to 1000 watts"

1929 - Pilot "Super Wasp" receiver
National SW-4 Receiver

1931 - National SW-3 receiver

1932 - Hammarlund Comet Pro receiver

and thus into the modern era.....

4) Finally, for those who didn't know it, the 13 WPM code speed requirement for the Class B (later General Class) license wasn't instituted until *1936* at ARRL request. Prior to that, the code speed requirement was 10 WPM for the old First Class amateur license and for the Class B when it was instituted around 1933 or '34 by the old Federal Radio Commission (before it became the FCC).

The Extra First Grade license was 20 WPM, but this license was dropped in 1933 by the FRC due to staffing limitations. It reappeared in 1953 when the Novice-Technician-General/Conditional-Extra structure was instituted. The "incentive" program in the '60s created the Extra Class subbands and reinstated the old Class A as Advanced with special 'phone subbands.

Not being familiar with the Motorola family of radios, I need to ask
for some general information concerning the Micor series. I have access
to two (4) channel Micor radios that are currently set up for use on the
154 - 156Mhz public service frequencies.

Can these radios be reprogrammed and/or tuned into the 2M Amateur band with
the intent of placing them in service as a repeater? If they can, how
difficult would the modifications be (for an experienced radio service
person)? The answers (if any) can be brief and general. At this point I
just need enough info to let me know wether or not to latch onto these
radios while I have the chance. Please reply to my E-mail address.

A friend of mine who works in search and rescue is looking for an HT that can handle AM airband xmit plus FM xmit. It turns out that Search and Rescue personnel wear equipment on them and they cant be asked to have even more equipment in their suits.
Does anyone know of a rig that can handfle AM transmit and FM, in otherwords offer 118-136MHz AM plus the FM band. He needs AM to talk to the Chopper S&R personnel and FM to talk to Police etc. An amateur radio HT that is modifiable would do nicely.
Thanks,
Peter, KC1QF

>want to buy a mobile rig. Any recommendations for other pieces of
>equipment?

In one of our cars we use this setup (inc the HTX-202). It works well
but you may have a problem with the telescoping antenna part. You
probably could get away with a 2m 1/4 wave whip but not a 5/8 wave
telescoping. The base of the telescoping probably wouldn't handle the
stress of 60mph winds (actually could be 120mph if you hit a 60mph head
wind). Depending on your terain, just getting a duckie out on a window
clip mount makes all the difference. We have many hills around that
cause problems, but getting the antenna outside works just fine. Usually
some whit noise but hey you can't be too pickey. --Ryan

Hello!

Does anyone out there have an algorithm for converting latitude-longitude
coordinates to international locator coordinates?

Also, I seem to remember seeing somewhere that there is more than one
locator scheme (i.e. ARRL vs. what is used in Europe, etc.) What
are the differences?

Ne> Seems minor, with all the imaginative phonetics heard and people who
Ne> say zed for the z in thei in their calls...which is supposed to be some
Ne> fancy british pronunciation? What does the group think?

The rules (part 97.119 sec b2) require "identification by phone transmission
in the English language. Use of a standard phoneic alphabet as an aid for
correct station identification is encouraged."

This makes sense, since amateur radio being international in scope, to
avoid confusion or misunderstanding. It may seem small potatoes but it
is a rule. The Zed I believe is just tradition and separates the
Z from C, E, etc.

I see where an argument can be made that it's not a requirement but it
does make good operating practice and it is traditional.

: -jim- WK1V

I talked to Kenwood and they recommended setting the 'locked' memories
with CTSS or other squelch setting so the radio won't stop there.
It is a bandaid, the radio takes one to two seconds to pass over
the memory.

You missed the point, Dana. There was nothing in the rules to
strictly prohibit the use of . ... . / . . but pink slips
were given out anyway. The FCC is allowed a broad interpretation
of their own rules. They felt that the prosign CQ must be used
to establish a QSO - anything else was prohibited.

This is one reason we stayed on 2m and 70 cm.

We demonstrated by listening only on 20 m.

There were many on the five 2m and two 70 cm repeaters we used.

Also we demonstrated simplex with the groups within the same city.

Also the scouts/cubs were on packet.

At the University of WAterloo the scouts/cubs were shown around the antenna
farm and the experimental antenna range.

We had a great time and avoided all the "bitching" from the "rock minded".

Either (1) ask the manufacturer about it (they WILL have someone
knowledgeable on this), or (2) "portablize" the unit and take it to the
dealer with you - and plug it in. If the sales person gets squeamish,
ask to talk to his Manager. If that person gets squeamish, go elsewhere.

>applies since these messages are not broadcasts in the sense meant

My reference was to the updated rules that were published last year.
In these newer rules, compensation is dealt with in 97.113(a)(2).
Part (b) says this:

97.113 Prohibited transmissions.

(b) An amateur station shall not engage in any form of
broadcasting, nor may an amateur station transmit one-way
communications except as specifically provided in these rules; nor
shall an amateur station engage in any activity related to program
production or newsgathering for broadcasting purposes, except that
communications directly related to the immediate safety of human life
or the protection of property may be provided by amateur stations to
broadcasters for dissemination to the public where no other means of
communication is reasonably available before or at the time of the
event.

>As to wasting resources, 99% of what we do as amateurs could be
>considered wasting resources by that standard. We're certainly
>not going to be able to save up spectrum for later use, once the
>moment is gone, it's gone whether we send anything or not.

True, perhaps, but my time is limited, and if I can't log onto the
local BBS because cookie recipes are being uploaded/downloaded, then I
see it as a waste of resources. I do favor stressing the system, so
that heavy-traffic incidents such as disaster relief can be prepared
for. I'd probably prefer a 10-line cookie recipe over a 200 line
Kep listing, but Keps are of direct interest to the general amateur
community, and as such are not illegal under part 97.

>The subject
>of content of speech is an area where the government should
>tread very carefully, if at all.

Again, this discussion is not about speech content, but one-way
communications.

Try alt.radio.pirate- ignore the flames.

Ramsey electronics makes a number of short range transmitters, for both
AM and FM stereo. They can be very useful, and even legal.

Cheers-

1408. Re: The Kenwood TH-79

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-27 19:19:49 UTC
From: grsnow@wpi.edu
Message-ID: <38ougl$si2@bigboote.WPI.EDU>
Source record: 257852

: I talked to Kenwood and they recommended setting the 'locked' memories
: with CTSS or other squelch setting so the radio won't stop there.
: It is a bandaid, the radio takes one to two seconds to pass over
: the memory.

Additional methods that I have used to block out memory channels are
as follows:
- Set an offset (+ or -) then use the reverse key to monitor
the other freq. On a repeater this would be the input, on for example
the Weather frequency, this would likely be a silent frequency. When
you wish to use the channel just hit reverse again.
- As stated above any of the squelch setting will also do the trick
but slow down the scanning. On repeaters that are very busy, I use the
reverse option and a squelch, so that any activity heard on the input
would also be ignored.
- Other ideas include copying the memory to vfo and tuning down one
noch of the ENC control... but this becomes tedious.

These methods are all only fixes not replacement for the true
features. Lockouts wouldn't have to be scanned at all... as if there
was no channel programed in. Memory bank scanning should also be an option.

Beyond this missing feature the TH79 is a great radio, IMHO the best
on the market, and for me the missing feature was enough to keep me
from buy the radio. I hope that Kenwood doesn't make a mistake like
this in the next radio they release.

Gregory R. Snow - KA1WIG
Worcester Polytechnic Institute

PS - excuse the readablity of the post.. I was in a hurry.

1410. GB2RS News 30th October 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-27 19:45:21 UTC
From: dave@llondel.demon.co.uk
Message-ID: <783312321snx@llondel.demon.co.uk>
Source record: 257678
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 30th of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

Council Member Dave Gourley, G0MJY, has resigned

Novice Licensee interviewed by the BBC

Possible new record for 10GHz operation

It is with regret that the Radio Society of Great Britain announces the resignation from Council of David Gourley, G0MJY. David represented Zone 'B', Midlands, and his resignation is entirely for personal reasons. The President and members of Council would like to thank David Gourley for his contribution to the work of Council and to wish him all good luck for the future.

The 1995 RSGB President, Clive Trotman, GW4YKL, is to be installed at a reception and dinner during the evening of the 14th of January 1995 at Bridgend, Mid Glamorgan. Anyone requiring tickets should contact Fay Huxley at RSGB Headquarters.

Amateur radio featured in the media last week when BBC Local Radio Three Counties visited Sandy Scouts at their Headquarters on Saturday the 15th of October. The occasion was Jamboree On The Air weekend when they inspected the JOTA Station and interviewed Paul, 2E1BFD for The Breakfast Programme, which was transmitted on Monday the 17th of October.

During the week ending the 15th of October, a major tropo opening affected all bands from two metres up to the 10GHz band. From inital reports many contacts in excess of 400 kilometres were made, with possible a new UK record on 10GHz of 1137km, done jointly by Roy, G3FYX and Ted, G3JMY both in Bristol and SM6ESG. For three days of the week the microwave bands were open right across Europe, with signal levels on the 10GHz the strongest that many people can remember. Any one who worked any station in Europe during the three days, from 70cm and up, is asked to send detailed reports to G3PHO who address is correct in the RSGB call book.

The Grampian UHF repeater, GB3BA, located near Stonehaven was returned to service on Friday the 21st of October at 10am. It was off air for 24 hours to rectify a distortion problem in the receiver. The repeater is on channel RB1, which has its output on 433.025MHz and input on

434.625MHz. Any reports on coverage and/or request for further details should go to the repeater keeper GM4NHI, whose address correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Bahrain, G0OAB expects to be active as A92FV from Saturday the 29th of October, CW only, but length of stay is unknown.

From Micronesia, WV5S and N5OK will sign V63SH and V63OH respectively, from Wednesday the 2nd until Monday the 7th of November. Activity will be mainly CW on the WARC and LF bands with some RTTY.

And from Bermuda, K3DI/P9 will be active from Sunday the 6th until Friday the 11th of November on all bands, with emphasis on the frequencies 7.025, 14.025 and 21.025MHz.

Now the Rally News and we know of one event for today, Sunday the 30th:

This is the Hornsea Amateur Radio Club's East Yorkshire Radio Rally which is being held at The Floral Hall, Hornsea, near Kingston upon Hull. Doors open at 11am, or from 10.30am for disabled visitors. The event features trade stands, a bring and buy stall and special interest groups which includes ATV. Refreshments are available and talk-in is on two metres, channel S22.

Next, the two events we know for the weekend, Saturday the 5th and Sunday the 6th of November:

First the rally for next Saturday the 5th and the Sunday the 6th of November:

The North Wales Radio Rally which is to be held at the Aberconwy Centre, Llandudno, North Wales. Also for this year the new North Wales Theatre will be available. Doors open at 11am, or from 10.30am for disabled visitors. The event features trade stands covering radio, electronics and computer interests, an RSGB Book and Information Stand, a bring and buy stall. Refreshments will be available and talk-in will be on two metres, channel S22. For further details contact Tony, GW0NSR, on 01492 513246.

And now the two events for next Sunday the 6th:

The North Devon Rally which is to be held at the Holsworthy Memorial Hall, Holsworthy, Devon. Doors open at 11am, or from 10.30am for disabled visitors. The event features trade stands, a bring and buy stall. Refreshments will be available and talk-in will be on two metres, channel S22. Further details from G8MXI who is QTHR.

The Tyne and Wear Repeater Group Auction which is to be held at the Fence Houses and District Community Centre, Fencehouses, near Chester-le-Street, County Durham. Doors open at 10.30am for booking goods in, The Auction starts at 12 noon. Further details from Brian,

G8FBQ on 0191 388 2913.

Now news of a Rally cancellation and change of contact details:

The Leeds and District Amateur Radio Society wishes to announce that due to circumstances beyond its control the Christmas Rally, scheduled for the 4th of December 1994 has had to be cancelled. Further details from G0IBU who is QTHR.

The Bishop Auckland Amateur Radio Club Radio Rally which is to be held on Sunday the 20th of November has a change of contact person, the new contact is Nick Dingle, G1XNI on 01388 488533.

Now for the HF contest news:

The CQ Worldwide DX SSB Contest finishes at 2359 UTC today, Sunday the 30th of October.This involves all bands 160 - 10 metres but excluding the WARC bands. See the October RadCom page 18 for further details.

The SWL Challenge takes place during this weekend, coinciding with the CQ WW DX Contest. See October RadCom page 25 for full details.

The Worked All Britain LF CW Contest takes place today Sunday the 30th from 1400 to 1800 UTC on the 160, 80 and 40 metre bands. There are sections for Fixed, Portable, Mobile and SWL stations. Full details are available from Gordon, G4SKQ whose address is correct in the RSGB Call Book or via packet at GB7SYP.

The International Police Association Radio Club (IPARC) World Wide Contest is being held next weekend, Saturday the 5th and Sunday the 6th of November. Saturday operation will be CW only and on Sunday the 6th, SSB only on 10 to 80 metres, from 0600 to 1000 UTC and from 1400 to 1800 UTC on both days. Entry logs to DF6VX who is QTHR by the 31st of December. Further details from Mike, G3PGA on 01271 860930 or packet at GB7SWN.

The HA QRP Contest takes place from 0001 on Saturday 6th until 2359 UTC on Sunday the 7th, on 3.5. 3.6MHz CW only. See November RadCom page 19 for further details.

Next some VHF contest news:

Another RSGB 10GHz Summer Cumulative Contest runs from 0900 to 2100 UTC today Sunday the 30th. See April's RadCom for details.

The second RSGB 1.3GHz and 2.3GHz Fixed and Listeners Contest takes place today Sunday the 30th from 1700 to 2100 UTC. See September's RadCom for details.

The fifth and final event of the RSGB 144MHz CW Cumulative Contest will take place from 2030 to 2300 UTC tomorrow, Monday the 31st of October. General rules will apply. Use 4422 summary sheet to show scores for each day, and the best three days will be totalled. Please send all logs plus a single 427 cover sheet for entry. Rule 10 applies. There are two

sections; the first for single operator or portable entries, and the other for listeners. The Adjudicator is David Johnson, G4DHF, 65 West Street, Bourne, Lincolnshire PE10 9PA.

The 144MHz CW-Marconi RSGB 24-hour Contest is from 1400 on Saturday the 5th until 1400 UTC on Sunday the 6th. The RSGB 144MHz CW 6-hour Contest is on Sunday the 6th of November, from 0800 to 1400 UTC. See the September edition of RadCom, page 82 for further details of both these events.

A special event station active this week is ON7FF, Flanders Fields. It will be operated by members of the Radio Club Ypres from next Saturday, the 5th until Sunday the 13th of November. Further details from G0ABZ who is QTHR.

And now the solar factual data:

The period from the 17th to the 24th of October saw a slight decline in solar flux with the geomagnetic field increasing to minor storm levels. Only one flare of any note was reported - an M3.2/1F on the 19th, accompanied by a reported solar wind speed of 1,000Km per second together with type 2 and 4 radio sweeps. An aurora on the 23rd, together with a late evening sporadic E opening on 10 and 6 metres covering much of Europe, caught most people by surprise.

Due to considerable changes in the URSIgram computer distribution system now under way, not all the data is at hand for this report. The sunspot indices peaked at 93 on the 19th before declining to lower levels with the mean being 65 for the period. The solar flux levels declined slightly throughout the period from 92 units on the 17th down to 82 units by the 24th, giving an average of 87 units for the period. The electron fluence levels were mainly at moderate levels, but increased to high levels by the 24th. The geomagnetic field started the period at very quiet levels, being down to an Ap index of only 2 on the 21st; by the 23rd levels had increased considerably up to 'sub storm level' with the Ap index reaching 41 units. A coronal hole is thought to be responsible for the mag storm. The period averaged an Ap of 15 units. The state has been mag alert most of the period. The X-Ray flux has declined from B3.0 on the 20th down to A8.7 by the 24th, giving an average of B1.6; this is still a good level for this period in the solar cycle. The aa indices as reported by the British Geological Survey for the period from the 12th to the 18th of October, declined from 32.7 nanoTeslas on the 12th down to 8.9 nanoTeslas by the 18th, giving an average of 20.1 nanoTeslas, about K3 for the period. Bartells rotation number 2202 started on the 23rd of October.

I'll repeat the figures. Spots - 65; Flux - 87; Ap index - 15; X-ray flux - B1.6.

Now the ionospheric data for Central France:

Not all the data is to hand but the F2 daytime critical frequencies at Poitiers as reported by Meudon for the period from the 15th to the 20th

of October increased every day from 7.1MHz, up to 9.3MHz by the 20th, which is the highest level since last February; the period averaged 8.2MHZ. The darkness hour lows have declined from 3.1MHz down to 2.5MHz and averaged 2.9MHz.

The daytime highs are now taking place around noon, with the darkness hour lows between 0500 and 0600 hours.

I'll repeat the figures. Highs - 8.2MHz; lows - 2.9MHz.

And lastly the solar forecast:

This week should see a return of a recurrent coronal hole which could give geomagnetic levels up to sub storm today with possible aurora. Geomagnetic activity is then expected to steadily decline as the week proceeds. Solar flux levels are not expected to change much, being about the 83s as the more quieter side of the sun is in view. Ionospheric MUFs in the south during daylight hours are expected to reach 21MHz but much depends on the mag activity. Darkness hours are expected to be around 7.0Mhz. North/south paths are expected to improve on these levels, with east/west paths becoming easier.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Juliet and G7 Tango Uniform series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Mike series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Hi everyone,
Our local club is looking to buy mass quantities of coax so our members can take advantage of the bulk rate. We're looking at various varieties of cable and we all feel warm & fuzzy about Belden.
One of our members got a copy of "The Wirebook" from "The Wireman". The book is a fantastic collection of information about transmission lines and such. It is also, of course, the catalog for "The Wireman". Their cable looks almost too good to be true! Therein lies my skepticism.
Is their cable REALLY that good? Who makes it? I find it hard to believe that they would make it themselves. The overhead for such an operation must be huge.
Please respond via email since I usually don't get a chance to read the newsgroups. I will summarize my findings on these newsgroups.

Ask this question in comp.home.automation. There was a program with
source posted there a few months back. It could handle up to 6 digit
VCR+ codes. It should be in an FTP archive someplace. Good luck

That is what I was wondering myself when I started reading this thread. Would using PGP on packet messages be illegal under the "no cypher" rule even if the callsigns in the packet header are easily decodable? I would think so, eh?

BIRDWATCHER [Gary, MI] at 21:28 EDT

Ever want to program a major shortwave station? Pick the kind of shows YOU want to hear?

Well here is your chance!

I have been asked by Adam Locke of WWCR to post the following:

To all WWCR Listeners:

This is your chance to let us know what you want to have more of. For months we have been doing country music to the world in the afternoons. Do you want this to continue, or would you like to have more talk programming during the day? Any favorite talk shows? Other ideas? Mail us a post card with the top five shows youwould like to hear during the day (no phone calls please).

EMAIL US at: NMKS01@PRODIGY.COM

Or write:

WWCR AFTERNOON PROGRAMMING SURVEY
WWCR AVENUE
Nashville TN 37218

Do it TODAY!!

Note: Please spread the word. Can someone post this on rec.video.shortwave and FIDO SW ECHO?

I can not access these conferences. Just repost the message.

I have already said what I would like. Also WWCR will be running their afternoon programming on a new lower frequency, so we can all HEAR it during the afternoon hours.

Corrections: E-Mail address is NMKS01A@prodigy.com
Street address is 1300 WWCR Avenue.
Program director is Adam Lock (no "e" at the end).

Any radio station can air the show at absolutely no charge, no contract.
Call KFNN, 1510am, for clock information and other details at 602-241-1510.

To get the show aired in your city, have your fellow hams call a local
small talk station and tell the program director to air the show.

Sending a few FAX's helps, too.

Satellite info is: The show can be heard via satellite on Spacenet 3,
Transponder 9, 6.8 audio

Let's keep Ham Radio and More alive!

Thanks!

Hmmm... the Washington staffer I spoke to a while ago seemed to be
pretty amused by the activities of amateurs. By the way, this staffer
is also an active amateur. Clay is maybe editorializing a little bit,
but I think he's mostly correct this time.

SB DX ARL ARLD064
ARLD064 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Bob, KA1XN, Chod, VP2ML, The DX Bulletin, Adam, N7VEW, Mathieu, F5SHQ, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SOUTHERN SUDAN. John, PA3CXC, is on signing PA3CXC/ST0. Check 18075 kHz between 1800 and 2200z, 7005 kHz around 0315z and 21020 kHz after 2200z. QSL via his CBA.

TOGO and CAMEROON. Adam, N7VEW, QSL manager for missionaries 5V7MD and TJ1JR, has announced the following skeds. Wednesdays at 2230z on 14165 kHz with TJ1JR and Thursdays at 2200z on 14165 kHz with 5V7MD. After the skeds 5V7MD or TJ1JR will usually hang around or move up the band to work some stations. QSL TJ1JR and 5V7MD to N7VEW at his 1994 CBA with an SASE. Please, no bureau cards.

MACAO. G3SXW and G3TXF are active as XX9SXW and XX9TXF. They operate mostly CW.

COCOS ISLANDS. TI9JJP is now active and should remain so through October 29. Check 14195 kHz and the usual DX frequencies.

80 METERS. A group of Asian operators including EX0V, EY8MM, UN7VV and AP2SD, are on a daily lookout trying to work west coast stations. Try 3795 kHz between 1200 and 1400z.

U.A.E. Don, WB2DND, will be visiting Dubai from November 11 to 16. Listen on 20 meters at 1300z on either 14025 kHz CW or 14090 RTTY, 14240 SSB at 2100z and 80/160 meters each morning at 0200z.

CUBA. A group of Cuban and Portugese hams will activate CO9OTA in the archipelago Jardines de la Reina between November 7 to 9.

Arnie, CO2KK, is now active on 160 meters. QSL via Arnaldo Coro, PO Box 6060, Habana Cuba 10600.

TAIWAN. WB4IUX plans to be in Taiwan either November 7, 8 and 9 or 16, 17 and 18. He is working feverishly on getting permission to operate. If he can secure this permission, plans are to operate almost exclusively 80 and 40 meters to give low band operators a chance for BV. Look for him in the 7008 to 7012 and 3508 to 3512 windows.

THIS WEEKEND ON THE RADIO. The CQ World Wide DX Contest, phone, is your chance to grab some new ones for your DXCC total. The Test runs from 0000z October 29 to 2400z October 30. All the details are in September QST, page 126. Here are some of the planned efforts for what is referred to by some as CQ World War.

SAUDI ARABIA. Terry, N4KT will be on operating HZ1AB solo on 80 meters.

EGYPT. There have been rumblings that SU2MT will be active in both the SSB and CW weekends of CQWW as a multi/single entry. Meanwhile, look for him on 15 meters around 1200z or 20 meters between 1700 and 2000z.

THAILAND. Fred, K3ZO/HS0ZAR, says members of the Radio Amateur Society of Thailand are planning major efforts in both the SSB and CW weekends. Listen for HS7AS and HS0AC.

TAJIKISTAN. Nodir, EY8MM, is gearing up for a single op/multiband entry. Listen for him on 160, 80 and 40 meters. It is believed that this will be the only station on from Tajikistan in this test. QSL via DL8WN. He also plans to be active during the CW weekend as EY3A with team members EY8WW, EY8QX, EY8CQ, EY8JX and UA3AB.

CORSICA. DL6RAI, DL5MAE, DL5MFF, DJ0MBU and DF4RD will be visiting TK5EL to activate that call as a multi/single entry. Before the contest listen for them signing TK/ their own call signs.

TURKS AND CAICOS ISLANDS. A group from the North Florida DX Association, NFDXA, will be traveling to VP5 to operate as multi/single using the call sign VP5Y.

GUANTANAMO BAY. Jeff, WI2T, will be active as KG4JO, single op, his work schedule permitting. QSL via WI2T.

BELAU/YAPP. Jim, WV5S, and Coy, N5OK, of the Oklahoma DX Association will be returning to Belau. Their old calls, KC6SS and KC6OK, may be used. They plan to be on until November 2. Emphasis will be CW on 160, 80 and WARC bands, with a chance for some RTTY. QSL via their home calls. After Belau they will be on from Yapp. Listen for V63SH and V63OH between November 2 and 9.

CANADA, CQ ZONE 2. John, WB2K and Davis, WJ2O, will be operating separate single op stations from locations about 20 miles apart. WB2K will be sign VE2TJA. WJ2O will be on as WJ2O/VE2. QSL via

their home calls.

ANGUILLA. K1DG and KA1XN will be in the fray as VP2EB. They will be active before and after the contest starting October 26 and ending November 1, as VP2E/K1DG and VP2E/KA1XN. Listen for them on 3753 and 14152 kHz.

GUERNSEY ISLAND. Listen for GU/F6FGN/P and GU/F5SHQ/P from October 28 to November 4 on SSB and CW, 80 through 10 meters. QSL direct to PO Box 14, 44521 OUDON, France.

ISLAND PING PONG. JA1ELY, JA1ETQ, JA1IDY and JL1UXH will be on from Comoros October 24 to 26, Mayotte Island October 27 and 28, and back to Comoros for the 29th and 30th. JA1OEM will be on from Reunion October 25 to 30 and then Madagascar as 5R8HP from November 1 to 20.

OTHERS TO LISTEN FOR include BV/N4MQX, C56DX, 3DA0Z, 5X1HR, 6D2X, 8R1K, HC8A, OH0MM, TO5MM by N3ADL, 4U4U, V29NR, V47WK, XE2DX, ZK2XN and ZV7C. Good luck in the test.

M{>Great introduction - well done, except for one minor nit.
M{>A decibel is always relative. As you clearly demonstrate,
M{>the decibel is the log of a ratio of two quantities. As such,
M{>the resulting number is always relative. By fixing one of
M{>the quantities, say as one milliwatt, you simply define one
M{>of the two. That doesn't make dBm an absolute quantity.
M{>Othewise, great.

I didn't catch the previous thread, but 0 dBm = 1 mW, and in the audio world, that generally means 0.775 V into 600 ohms.
Other references used are 0 dBV= 1 volt (not a power measurement, but voltage), 0dBu=.775V (also not a power measurement), 0dBf= 1 femtowatt (which was brought in to clarify receiver sensitivity specs, after the industry starting playing around with numbers).

Indeed, the dB represents a ratio, and is meaningless without a reference value for 0dB, whether it's a certain power level or whatever. The dB is just a handy way to think about how much more or less of that reference you are measuring. I hope this helps.

I've got a question for all you Hammys out there.

My parents are sailing to Mexico in January and I'd like to stay in contact
with them via internet.

My father has has ham gear aboard. Can he subscribe to a service and
have access to internet with the HAM radio?

If so, who do I contact to set it up and what special gear will he need
on his end.

Thanks in advance

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 OCTOBER AND FORECAST FOR 28 OCTOBER - 30 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 93/38

GOES satellite data for 26 Oct
Daily Proton Fluence >1 MeV: 5.7E+05
Daily Proton Fluence >10 MeV: 3.7E+04
Daily Electron Fluence >2 MeV: 7.6E+08 (high)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Oct 29 Oct 30 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Oct: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 26 Oct
Learmonth 6 3212 2111
Fredericksburg 7 8
Planetary 10 8

Observed Kp for 26 Oct: 3233 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Oct 20 Unsettled to active
29 Oct 15 Unsettled to active
30 Oct 40 Active to minor storm

COMMENT: IPS Geomagnetic Warning 8 was issued on 27 October and is
current for interval 27 October to 4 November.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Oct normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Oct normal normal normal-fair
29 Oct normal normal-fair fair
30 Oct normal normal-fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
27 Oct 38 near predicted monthly values, with 15-30% enhanced
during local night.

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
28 Oct 30 Near predicted monthly values to 20% enhanced.
29 Oct 20 Near predicted monthly values
30 Oct 15 Near predicted monthly values

COMMENT: IPS HF Communications Warning 9 was issued on 27 October and
is current for interval 27 October to 4 November.

In article <CyCEKB.7Hq@wang.com>, dbushong@wang.com (Dave Bushong) writes:

|>Again, this discussion is not about speech content, but one-way
|>communications.

Good, I'm glad you see our point then. The communication is two-way. I send a packet to the PBBS and it sends me an acknowledgement. What is one-way about that? The content may be construed as one-way, but the communication is definitely two-way. That is unless you set up your beacon text to be a 10 line cookie recipe. ;-)

And to whomever it was (was it you Dave?) that made the comments about folks being too cheap to purchase Internet access or whatever, that is really a stretch. That is like saying we should eliminate the phone bands because people are too cheap to make long distance calls.

: GJ>I've been trying to find out what the "spec" cutoff frequency is for
: GJ>NBFM de-emphasis. I've browsed through a few books, but they only
: GJ>mention WBFM de-emphasis.

: I have a couple of old ARRL publications that indicate a 75 usec
: pre/de-emphasis curve is recommended for NBFM. ...

NBFM communications transceivers have a constant 6 dB/octave
pre-emphasis (tx) / de-emphasis (rx) curve throughout the audio range
(300-3000 Hz). As Tom mentioned, a 75 us network has a 3 dB point at
2.122 kHz, with basically flat response below that frequency.

75 us pre/de-emphasis is used for FM broadcast transmitters/receivers,
but has nothing to do with NBFM communications radios.

I expect that many of us whose CW skills would not be described as "sharp" have experienced this kind of behavior a at one time or another. I'm the first to admit that my CW skills stink -- although I've tested at 13wpm I'm really not really comfortable much above 10wpm. Still, I like to get on the CW bands from time to time for a QSO or two if only to keep my hand in, so to avoid unpleasant experiences like the one you describe I have a simple rule of thumb: work Novices with similar skills to yours, or listen for Extras callsigns in the Novice sub-bands.

IMHO the latter are the *real* CW ops among the amateur ranks. I've had a number of very satisfying QSOs with folks capable of running at 35wpm who are perfectly content to poke along at 10wpm for my benefit. It seems perfectly clear to me that these folks -- the ones who run CW purely for love of the mode -- are the ones who will keep CW from becoming a lost art. Or at least they'll contribute a great deal more to the cause than those who say "there goes the neighborhood" whenevr a no-code Tech shows up on the local repeater.

Well, each of the replies and posts on this topic, expressed reasoned opinion (most were opposed to any double letter statements. Several educated regarding the origins of Zed usage. If my referring to it as "fancy british pronunciation offended you, well you've got a prett low tolerance level for discussion. But that's ok. In the states we don't use a lot of expressions that are perfectly at home in England. Most of us don't use lifts, we use elevators, for examples. Some might consider the use of british vernacular...somewhat pretentious. Which says nothing untoward about the british.

Now I understand that that is not the case with the zed situation. But someone else told me that, and i posed it here as a question (take the time to look at the context ? means is this correct?).

Despite your (weak) flame, I still wish you well...thanks for taking the time to reply.

Jeff Racz (jeffr@sa-htn.valmet.com) wrote:

: You should refer to the section of the rules prohibiting amateurs from using
: codes and cyphers in communicating. I think that they pretty explicitly
: exclude the use of PGP in amateur radio.

The prohibition against codes and cipher refer to obscuring the meaning
of a message, NOT authentication. Therefore using PGP to sign messages,
even in ascii armor form (as long as the intent is not to obscure the
message) is perfectly within the rules.

Think of it like a packet framing checksum at the application layer.

I was just wondering if some of you folks out there might be able to help me with a problem I seem to be having.

I have an Icom H16 radio with a CM8 (BP8) battery pack. Whenever the radio becomes cold, it goes "dead." The display seems to work, but there isn't any audio. Once you warm the radio back up, it works fine.

I was wondering if it might be something to do with the battery pack. I bought the radio used about 5 yrs ago, and haven't done anything with the pack.

It's kinda important that I get this problem solved because I use the radio with a search and rescue squad up here. Winter is approaching fast and a dead radio isn't any good out in the field.

Ryan -- According to their literature, Logic 4 interfaces to any RS-232 interfaceable Icom, Kenwood, Ten-Tec and Yaesu rigs. I'm also a satisfied customer of Logic 3 for DOS and am going to upgrade to Logic 4 for Windows. I don't use this feature, but I've never heard any complaints about it.

I agree that I'd get CT for serious contesting, but I'd still have Logic for routine operating and then import the data from CT. As it is, my contesting is pretty casual, so Logic is fine for my purposes. (With an inverted V that is about 35 feet at the peak as my primary HF antenna, I don't have much CHOICE about being only a casual contester -- it's depressing enough to see my score at the end of the contest; if I could see it in real time, I'd probably give up an hour into most contests ;-}.)

Ok, you rang my bell... I have a problem with LOGIC, at least version 3. The very first logging program I ever used was LOGIC Jr, which I thought was a good program, did as advertised, but lacked some bells and whistles. I ran it for about two years, fat dumb and happy, and then the factory made a serious mistake. They sent me an ad about upgrading to LOGIC 3. Lots of bells and whistles, all the good stuff. Naturally, thinking that if it costs more, it's got to be better, I sent in the $$ for the upgrade. Wrong. It DID do what it said - no false advertising here - but it was slooooooooow.... one could take a nap waiting for it to do even the most basic things like switch from the active logging window to the log edit window. ZZZZZZZZ..... By comparison, LOGIC Jr was lightning fast. Press the key and the info was there, bang!

By now you may have guessed that I'm not the most patient person around, and it's true. I found the slowness intolerable. Made a couple of phone calls to the factory with no results, so I started looking around for something better. To make a long story short, I stumbled across the LogPlus! program by KD7P and gave it a shot. I've been pleased from day one. Ok, ok, there were some bugs in it that had to be worked out, and frankly, that was a little more painful than I thought it should have been, but now they are finally gone and it's my everyday logging program. I love it and see no reason to change.

I'm no programmer, but I think the difference is the way each program uses index files. There are two ways to search for data - the program can either search through the entire database (slow), or it can search through an INDEX to the database, and make a decision based on what's in the index. Sort of like finding a subject in an encyclopedia by looking through every page versus looking in the index and then going to the page of interest. The LogPlus! program is fast, even with over 7,000 QSOs on file like mine has. So what's the tradeoff? Lots of index files, each of which takes up more of your precious memory.

If you have eight or ten or sixteen meg of RAM, you probably won't ever notice, but if you have just four like me, and you multitask, you will probably have occasional crashes. I like to multitask under Windows, usually running LogPlus!, my TNC program (Hostmaster II+) and the DOS version of DX Edge. This is known as pushing the envelope, and is not recommended for the faint of heart.

Ok, I've probably rambled on enough for now. What I've said here is my experience, but don't take it as gospel. Use it as a starting point to make your own evaluation, and when you do, please post your observations and findings for all to share.

Good luck and 73,

W7LZP

You're in CQ Zone 3 (as is the entire US west coast and British Columbia). You might even try an occasional CQ of your own. Although domestic contacts don't count for points, they do count for multipliers, so everybody needs at least one contact on each band they're operating, in each zone and country. I don't know about other people, but I hesitate to call a domstic station that sounds like they're real serious about the contest just to get the multiplier, since I might keep them from getting a contact they need for points (and a multiplier). Also, calling someone in your own country who is calling "CQ contest" like they're real serious about it tends to result in lectures about how it's a "DX-only" contest, which is ALMOST, but not quite, true.

The acks for ax.25 protocol are little more than the op at W1AW looking at the power meter and seeing that watts are going into the antenna. The acks mean that data is reaching the other BBS. We have no idea where the bits go from there. All we have in ax.25 is a remote wattmeter.

>>jeffrey@math.hawaii.edu writes:

>>>Show me a *commercially* built amateur transmitter/receiver for the
>>>1929 ham, Rich! Just what do you think was available back then?

> A lot more than you are aware of, obviously. While it is true
>that hams of that era built their own transmitters as a rule,
^^^^^^^^^^^^
Exactly what I had in mind. That was the *amateur's* code, not the
SWL's code!

> According to magazine ads of that era, it would also seem that
>there were many "ready-built" components available which would have
>simplified construction somewhat.

But even so, the vast majority had to build what they operated.
What was out there, in terms of components was quite expensive
(price the available tubes and compare them to the average
salary!).

>>>And even if there was one (which there wasn't), it would have been
>>>up to the manufacturer, not the ham, to insure it was ``well-built''.

> Better read the FCC regs again, Jeff.

And tell us just what were the regs back then in '28, Paul?
I still contend that the ``well-built'' statement referred
to what the hams were building, which was just about everything.
Look throught the QST's of that period and you'll see photos
of homebuilt stations.

>It is *never* up to the
>manufacturer to ensure that a piece of equipment *once installed in
>a station* complies with the FCC regulations for purity, stability,
>etc., etc. It is *always* the responsibility of the station
>licensee. The FCC does not inspect every piece of manufactured
>equipment to see that it complies, it merely tests a sample and
>then depends on the manufacturer to ensure that all units comply.

Paul, we're talking about 1928, for gosh sakes! You need to change
all your verbs to the past tense, then apply your argument to the
regs and available equipment of that time.

>If your rig "gets you in trouble" with the FCC you can try filing
>suit against the manufacturer (lots of luck!) and if it happens

>a lot the FCC may take a closer look at the manufacturer, but in t
>he final analysis it is *always* the licensee who is responsible
>(that's why your station is *licensed*, to ensure that *someone*
>is responsible for it).

A wonderful statement for *today's* ham. But there was no `FCC' in
1928, was there?

> Read "200 Meters and Down" for a historical perspective on this
>issue. The problem in those days was that a lot of the wonderful,
>homebuilt stations Jeff is crowing about had *abominable* signals:

Yes, by today's standards; but you have failed to put yourself in
in that time period when the Amateur's Code was written; they made
do with what they had available. And that is a wonderful book to
read.

Dana said:

>>Anyway, even when you buy equipment, it isn't the manufacturer that
>>is held responsible for the proper operation of the station; it is
>>the station licensee. In other words, the ham is always the
>>the one to insure the station and equipment therein, is
>>"well-built".

Very true, Dana, but you're speaking in the present tense. I again
ask you to think in terms of 1928; there wasn't much buying of
ready made equipment back then. That's why I still contend that
`well-built' referred to what the amateur built.

> One final note: It was in the 'teens that "amateur wireless"
>began to take on a distictly different character, from "wireless
>experimenters" to "wireless communicators." In other words, the
>enthusiasts were more interested in communicating on the radio
>than just tinkering with it. This is what led HPM to form the ARRL
>and establish the first nationwide trunk lines. It was a fortuitous
>move, because had that not happened and the aspect of "amateur radio
>as a public service medium" never developed, there is little doubt
>that the U.S. Government, tired of amateur wireless interference to
>commercial and government interests and seeing no "saving grace" to
>the hobby but merely a bunch of obnoxious, unorganized attic tinkerers,
>would not have supported amateur frequency allocations at the
>international conferences and amateur radio would hve been banned.

And this is something today's hams should keep in mind prior to
bashing the ARRL - if it wasn't for the League amateur radio would
not have survived to today.

: LASER DOPPLER RADAR DOES EXIST! HOW DO YOU THINK YOUR LOCAL TV STATION GETS
: THOSE NICE WEATHER RADAR MAPS? SOME ARE MICROWAVE BUT SOME ARE LASER DOPPLER!
: ALSO THE FAA IS LOOKING INTO BUILDING A WINDSHERE DETECTION DEVICE, it uses
: guess what ..... LASER DOPPLER RADAR. Raytheon may be awarded this project.
Certainly it does. So what? It is not being used for automotive speed
measuring equipment - so your yelling is irrelevant.

: LASER RADAR CAN BE EASILY STEALTHED! ANY CAR CAN BE SET UP to absorb the
: infrared light. or use multi faceted material.

Uh,huh. And, just what are you going to use? Even black does not absorb
most of the infrared. Sure, you can reduce the returned signal - but
that is all. At 200-300 feet, you are not going to be able to reduce
it enough. Remember, unlike doppler shift speed measuring equipment,
the distance to the target does not matter materially.

The smallest "Radar Ranges" I have seen are about 300 Watts.

My point was, the ERP does not have much to do with any hazard.

why not give the identity of the material? free exchange if information is vital to the freedom of the people to avoid unwanted monitoring by any authority . actually, it probably wouldn't be to hard to figure out what characteristics a material would have to have to absorb the laser radiation. It probably would be impractical to cover one's car with that, or at least aesthetically unpleasant. More likely, a sufficiently powerful source of random noise centered at the laser's frequency would be adequate to prevent the measurement of speed.

I already responded to this in a previous posting. As I stated there,
your argument is immaterial. I am well aware of doppler laser, it has
been around for about 20 years. It is just that the laser speed measuring
devices do not use doppler, they are Time and Distance, and laser is very
good at measuring distance.

There may be an exception. I think it was Gary C. who stated that the
Georgia police have experimented with doppler laser.

Bill

1449. What do you think Amateur Radio is?

Newsgroup: rec.radio.amateur.misc

Hello, Charlie N0XFD here again. Still working on my speech project and still lookinf for your definitions of ham radio. So take a min if you will and send me what you think ham amateur radio is, what we do, why do we have it, ect. Go into anthing you want! I've gotten about 15 replys so far, and I'm still looking for more! So voice your opinion if you will, I'll keep you posted of my outcomes if you send me a def. Hope to here from you, and thank-you for your time!

>I think it's always in the benefit of the ARS when a clarification
>of the rules are made in advance to violation notices being handed
>out. All it probably took was for a few to stretch what was considered
>appropriate use of packet for this clarification to be made.

Agreed, and I too appreciate the clarification of the rules prior to the
issuance of NALs. I'm probably risking flamage, but many of the messages
floating around packet BBSs don't have any relevance to amateur radio
whatever and are sent as bulletins (aka broadcasting). What I view as a
problem is the widespread abuse of the system. I see bulletins advertising
amateur equipment for sale. This, in itself, is not a problem. Yet a
large quantity of those messages are sent to ALLUS or, worse, WW. It's gotten
so bad that I don't even bother to read the messages.

>On the back of our license it says, in part, `Operation of the station
>shall be in accordance with Part 97 of the Commission's Rules.' Our
>signature on the front binds us to this statement.

Good words of wisdom, Jeff.

>If someone has a problem with this OO and this clarification, I hear
>that packet might now be in use on the CB frequencies....

>>*** that you can to make Amateur radio packet boring.
>>*** 73 George K7WWA @ K7WWA.#NOCAL.CA.USA.NOAM

>Boring maybe, but legal!

It's already boring. What little bandwidth we have on 1200 baud
packet is wasted passing bulletins around the country that precious few
actually read.

>Is there a difference between:

>1. My tuning in a W1AW transmission and listening to an ARRL bulletin.
>2. My tuning in a packet BBS station and reading an ARRL bulletin.

>I submit that both forms of the bulletin are the same. I end up with
>identical information. In both cases, the bulletin is an
>"informational bulletin". In both cases, the transmission is
>one-way. There is not an exchange between two stations. The form
>that the data takes is irrelevant. The mode upon which the data is
>transferred is again irrelevant.

Playing Devil's advocate here, what's the difference between:

1. Getting on the repeater to announce I-65 is closed at the Brooks exit
because of an accident.
2. Talking to "Joe" on the repeater and telling him I-65 is closed at the
Brooks exit.

It can be argued that the first form is broadcasting and is therefore illegal
per Part 97 of the FCC Rules and Regulations.

For what it's worth, I think most of the packet bulletins are within the rules
and regulations. But there are a lot of messages that are questionable at
best. Quite frankly, I think many people should use common sense before
addressing a message (why send a message to 4SALE@ALLUS or 4SALE@WW when you
know darn well it'll be sold before it makes it across the country, for
example).

From: an138016@anon.penet.fi
Message-ID: <082302Z28101994@anon.penet.fi>
Source record: 257795

Hi folks,

does anyone have contact information for advance tickets
to the '94 Computer Expo / Hamfest this Saturday in St Paul, MN
at the Civic Center? I believe it's this Saturday 10/29.

Replies via e-mail (an138016@anon.penet.fi) or followup post are fine.

Thanks!
Dave

To find out more about the anon service, send mail to help@anon.penet.fi.
Due to the double-blind, any mail replies to this message will be anonymized,
and an anonymous id will be allocated automatically. You have been warned.
Please report any problems, inappropriate use etc. to admin@anon.penet.fi.

>all the <keywords> in all the posts that have arrived since last time
>you logged in. Then you tell the BBS which <keyword> "group you
>want to list. Looks a little like a newsgroup.

>Anyone done this?

The KA9Q NOS varients already have this ability except that it truly does
segregate messages into different folders. Private messages to me are put in
my private mailbox while bulletins to FORSALE@anything are in the public
FORSALE mailbox. It really is a better way to handle messages, especially
since most people seem to want to view a small niche of messages. Hopefully
MSYS and F6FBB will add such capabilities in the near future. Frankly,
stuffing all messages in one pen is the pits.

>barry

Yes, but it affects the world, doesn't it? Does the FCC control the airwaves
in G or XU? Because the broadcast certainly was affecting people from both of
those countries!

Although I can see that it is a useful service, that doesn't excuse them for
wiping out other amateur stations.

In fact, you could say that it was not an amateur broadcast at all, since it
was a *broadcast* and not a two-way communication. And they were certainly
not operating in the *spirit* of amateur radio (stepping on an existing pileup,
and not checking that the frequency is not in use).

Why, therefore, should they make the *broadcast* in the amateur bands at all?
Why not get "authorization from the FCC" for *broadcast* just outside the ham
bands, such as 14.350 USB? That would mean that anyone with an amateur receiver
could receive them and they would not affect anyone else.

Scott

1455. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-28 09:45:11 UTC
From: ikluft@oes.amdahl.com
Message-ID: <ham-faq-ptr-1-783337445@oes.amdahl.com>
Source record: 257765
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

```
Posted-By: auto-faq 3.1.1.4
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
------------------------------------------------------------------------------

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th and 21st of each month. This article is posted on the 14th and 28th
of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic
----------------------------------------
The World-Wide Web (WWW) has experienced explosive growth in usage in 1993
```

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------ --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

--Asking Questions---

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

Yes, and if I can't log onto the local BBS because ARRL Bulletins or DX BS
is being uploaded/downloaded, then I see it as a waste of time.

So what's your point??

>>that hams of that era built their own transmitters as a rule,
> ^^^^^^^^^^^^
>Exactly what I had in mind. That was the *amateur's* code, not the
>SWL's code!

Well, you didn't exactly *say* that, you said "transmitter/
receiver," which is different. But, in fairness, I knew what you
meant. But let's continue on.....

>> According to magazine ads of that era, it would also seem that
>>there were many "ready-built" components available which would have
>>simplified construction somewhat.

>But even so, the vast majority had to build what they operated.
>What was out there, in terms of components was quite expensive
>(price the available tubes and compare them to the average
>salary!).

Well, you're implying that the average ham "manufactured"
his own tubes, which really isn't true. I have a 1924 Radio Amateur's
Handbook (the A. Frederick Collins variety, not ARRL) and it has
schematics, parts lists, and even photos of ham stations from 10
to 100 watts, CW and 'phone. Not a homemade vacuum tube in sight!
Lots of commercial capacitors, tube sockets, and the like. But
the coils were certainly handmade, and all the wiring, the breadboard,
etc. Lot of hand work, to be sure, but probably not much glass
blowing..... :-)

Regarding salaries, remember that the '20s was a time of
general *affluence* in this country, and the Amateur's Code was
written in 1928; the Depression didn't occur until after the
Crash of '29 (very late '29).

>>>>And even if there was one (which there wasn't), it would have been
>>>>up to the manufacturer, not the ham, to insure it was ``well-built''.

>> Better read the FCC regs again, Jeff.

>And tell us just what were the regs back then in '28, Paul?

Well, now, I'd have to research the regs of that era, of course, but there *were* regs. As a matter of fact, there have been regs ever since the very first set created in the U.S., the Radio Act of 1912.

I'll allow as how you were probably referring to that era because you did use the phrase "would have been up to the manufacturer." However, my statement till stands; in fact it was *absolutely* true in *that* era that the manufacturer *was not* responsible for ensuring that his equipment was "well-built" because there were *no* technical standards for manufactured equipment as there are now. So, even if a ham of that era bought manufactured equipment, it would be up to the ham to ensure that it didn't prevent his station from qualifying as "well-built."

>>It is *never* up to the
>>manufacturer to ensure that a piece of equipment *once installed in
>>a station* complies with the FCC regulations for purity, stability,
>>etc., etc. It is *always* the responsibility of the station

>Paul, we're talking about 1928, for gosh sakes! You need to change
>all your verbs to the past tense, then apply your argument to the
>regs and available equipment of that time.

I did. See above.

>>If your rig "gets you in trouble" with the FCC you can try filing
>>suit against the manufacturer (lots of luck!) and if it happens

>A wonderful statement for *today's* ham. But there was no `FCC' in
>1928, was there?

There was a Federal Radio Commission, which examined applicants, issued licenses, revoked licenses, etc. In 1934, the Communications Act of 1934 created the FCC and the entire FRC staff just kept right on with what they were doing, only under a different name.

>> Read "200 Meters and Down" for a historical perspective on this
>>issue. The problem in those days was that a lot of the wonderful,
>>homebuilt stations Jeff is crowing about had *abominable* signals:

>Yes, by today's standards; but you have failed to put yourself in
>in that time period when the Amateur's Code was written; they made
>do with what they had available. And that is a wonderful book to
>read.

Well, my point was that Paul Segal wrote the Amateur's Code in the first place as a means of trying to get amateurs to "clean up" their act. When I say abominable signals, I also mean operating practices; rampant BCI, deliberate interference with commercial and military traffic, etc. It was feared by ARRL that at the next ITU conference the U.S. delegation might not be so supportive of amateur radio if these practices continued.

Don't forget that "quiet hours" *imposed* by the FRC were very common for hams of that era, and there was a reason: BCI. The FRC was tired of complaints by the public, and that was the solution. So, Another focus of the "Amateur's Code" was to get hams to operate responsibly and try to solve the BCI issue, so the ARRL could argue that "we are self-policing; we are responsible," and maybe the FRC would *lift* the "prime time" operating ban.

So, the Code was a mean of estblishing a well-publicized "yardstick" of conduct; it wasn't a statement of how great and wonderful the hams of that era *were*, it was an attempt to correct deficiencies (and I'm sure the "publicity" aspect was not lost on the League, especially in dealing with the FRC).

>>>the station licensee. In other words, the ham is always the
>>>the one to insure the station and equipment therein, is
>>>"well-built".

>ready made equipment back then. That's why I still contend that
>`well-built' referred to what the amateur built.

Well, we have a semantics problem, then, because I believe 9EEA meant that an amateur station, taken in toto as an entity, should conform to the best construction practices of the day *regardless of whether it was all homebuilt, partially commercial, or all commercial*, and the *amateur* was responsible for seeing that it was so. I *do not* believe that Segal meant to imply in any way that an amateur *had* to "build his own" in order to conform to the Amateur's Code; he simply meant that *however* the amateur assembled his station, it should be a "professional-quality" result. And that interpretation would apply just as much today as it did then, which means that the Amateur's Code is just as applicable today as then (which I also believe to be true; especially the "Gentlemenly" part, which seems to have fallen from favor.....).

>> One final note: It was in the 'teens that "amateur wireless"
>>began to take on a distictly different character, from "wireless
>>experimenters" to "wireless communicators." In other words, the
etc., etc.

>And this is something today's hams should keep in mind prior to
>bashing the ARRL - if it wasn't for the League amateur radio would
>not have survived to today.

Well, I'll give you a kudo for that one, Jeff, you're absolutely correct. In fact, it probably would have disappeared in 1919, or certainly by 1924, without a focused organization to promote it. And the lesson for today is.....you may not always *agree* with the League, but the historical record shows that the League has always acted in the best interests of *preserving* amateur radio, and sometimes that has meant compromie. But a compromise that gives you "something" is often (but not always!) better than a "hard stand" which leaves you

with *nothing* if you lose.

Sorry, I didn't mean to imply he would not be landing. This is not another Voyager like attempt, this is a high speed race around the world and many stops will be necessary. Actually that's why the need for weather reports, if he was not landing he could simply divert around the weather but since he will have to land to refuel and reprovision he will have to be making stops at Hawaii, Guam, Phillipines, Seychelles, East Africa, West Africa etc.

What I'm interested in at this point in the planning would be the difficulties in setting up a network of people who could report the weather at those various locations so that up to the minute weather information could be relayed to the pilot. This may be redundant in that he will have a strike finder (indicates direction and intensity of lightning strikes) and will be intercepting satelite weather transmissions which will overlay his moving map display but things, on attempts like this, have a habit of going wrong so having a certain amount of redundancy is considered prudent. Besides the weather information overlay doesn't give actual conditions it just shows cloud patterns and weather fronts. Real up to the minute weather observation and the ability to transmit this could be an important part of the success of the attempt.

But I gather from your post that transmission from the aircraft is possible which would allow him to be in direct contact with the next stop.

Thanks for this information.

>a self policing hobby. Would you like ham radio turn into the chaos
>of CB?

No one wants that, however you've misinterpred what self policing means. It does not mean vigilantes or self-important kilocycle cops. It means that each amateur is supposed to police *himself*, IE voluntary compliance with good operating practices. Admiral Grace Hopper said it best when she said, "it's better to beg forgiveness than to ask permission" in reference to dealing with government bureaucracies. Even the ARRL itself has often maintained that amateurs should not ask the Commission for rulings. They almost always prefer to say no since it exposes them to the least risk. It's better to wait and let them tell you that something you're doing doesn't suit them. They rarely do, and it gives us much more flexibility.

I'm not overly concerned about what an FCC staffer said about "bulletins" being one way transmissions. They obviously are not, and the FCC staffer likely isn't familiar with the corrupt terminology used by amateurs, so he didn't understand that the "bulletins" in question are actually third party traffic passed between amateur stations. This will eventually be straighened out when the right ear is reached. The FCC has already declared packet messaging systems to be handling *third party traffic*, so there can be no question that this traffic is broadcasting. What irritates me about this whole episode is that a Kilocycle Cop went to the FCC with his ill-conceived question and thus got an unfavorable ruling that will now have to be undone.

The FCC regs do allow broadcasts for very specific purposes including
code practice and bulletins. Don't have my FCC rules book handy (packed
away in preparation for a move) but perhaps someone else can cite the
paragraph that applies. You can be sure that W1AW operates within the
rules.

Well then lets look at what the FCC says about broadcasting. In
97.3 broadcasting is defined as, "Transmissions intended for reception
by the general public, either direct or relayed." Now it should be
clear that amateur packet messages are not intended for reception
by the general public. Only those who can log into the BBSs and
request the message be downloaded to them can read these messages,
and the general public can't do that. As 97.109(e) makes clear,
amateur BBSs are engaged in *third party* communications between
amateur stations. They are *not* engaged in one-way transmission
unless they are beaconing.

No, the acks say more than that. They are the packet equivalent of
QSL. They acknowledge that a transmission has been received *correctly*.
But BBS message passing consists of more than just AX25 acks. There
is a rigid BBS protocol for forwarding *third party traffic* between
these amateur stations. That has to be followed just as good traffic
handling protocols have to be followed on a CW traffic net in order
for the third party messages to be successfully handled. There are
no one-way transmissions involved, nor is there any broadcasting,
as defined in 97.3, involved.

The only thing that differentiates a cookie recipe from a Keplerian
element message or a "Best wishes from the World's Fair" message is
the *content* of the third party message. On that topic, the FCC
says only that the message content must not be commercial, and that
it must not contain the "seven deadly words".

I have a question about IP addresses. I have my liscense and i am looking to open up a packet station.

1) Are the IP address "permenant" meaning that it's mine for as long as i want? or are they just unique ip's that are put into an address base on a nameserver based upon my callsign?

2) Do I have to have a station up shortly after i get the IP or can i just get the IP and hang on to it until i get the station up and running?

Hmm. I guess you missed the recent article on building a 160 kHz transmitter, or the one on a computer controlled fan, or perhaps the tutorial on military ALE systems. Granted QST has a rather narrow focus, but even in it's pages you'll find the occasional article that isn't strictly about ham radio. (I happen to think many hams are too narrow in their focus, and that a bit of information on the rest of the things happening in the world isn't amiss even in a ham journal. Amateur radio doesn't operate in a vacuum.)

You are attempting to describe operation under Part 15 rules. These
operations are *not* outside FCC jurisdiction, it's just in a different
part of the rules than amateur operation. The rules for Part 15 devices
have recently been changed and the 100 milliwatt specification no longer
applies. They now set field strength limits on the radiated signal,
and that varies from one part of the spectrum to another according to
a table in the rules. There are also frequencies where Part 15 operation
is illegal, such as the aeronautical frequencies and the public service
frequencies. Besides, intentional jamming is always illegal unless done
by a government agency.

Since your sending data that can be widly decoded, and in a form that
anyone can get the key and do, then doesn't this fall under the acceptable
use of encoding? I don't have part 97 in front of me, anyone want to quote
the passage.

Part 15 was rewritten to change the power definition to one *of* ERP,
which is equivalent to field strength, rather than one of specifying
a 100 mW *input* power limit and an antenna length restriction as was
the case with the old rules.

Rec.radio.pirate does indeed discuss illegal operation counter to
FCC rules. Even they don't normally countenance jamming, however.

There are the lists maintained by the Boston Amateur Radio Club (about 13
in all).

Send a message to listserv@netcom.com.

Ignore the Subject line.

In the body of the message, type: subscribe barc-list

This will add you to the Boston ARC's e-mail list and provide you with
the FAQ page for the other lists we run, including *THE CORRECT ADDRESS*
for unsubscribing should you wish to.

73,

Scott

I think ascii-armor signing should be avoided.

Basically, I would say, as long as you CLEARSIG your messages, you ought to
be safe...

Well the retired intercept operator I knew (he's passed on now) could
do 60 WPM, but I did say he was the best I'd ever met. I'd tend to
agree that most operators probably run out of steam nearer to 40 WPM.
The book on the OSS that I read said the native intercept operators
were in the 40 WPM range.

>>The limitation is not an aural one. Typically it's a mechanical
>>limitation in transcribing the information onto the paper. Most

>phrase direct interpretation" one; that is, the brain goes
>into a "higher-level" interpretive mode even though the operator
>may be copying subconsciously, and that's the only way that plain
>text can be copied faster than coded groups.

I suspect that some researcher has looked into this, but I can't
point to a paper on the subject. However, I would note that you
say one of the intercept operators you talked to said trying to
copy above 45 WPM would be like copying a pure tone. Now I don't
think that can be true, since that would apply to plain text
as well. The ear still has to be able to distinguish the code
elements to allow any copy at all. A pure tone would convey no
information.

It seems paradoxical that interposing an intermediate step,
that of word interpretation, between hearing the code elements
and writing them down, would *increase* an operator's correct
copy speed. I would have been of the opinion that the reverse
would be true. That's what my friend maintained. He said thinking
about the message spoiled copy.

That would indicate to me that there may be two distinct ways
of "copying" code. One is the faithful character by character
method demanded of crypto copy, and the other would be writing
down from memory interpreted translations of what was heard. The
latter would only work if the text was in a language interpretable
by the operator, IE plain text in a language that he spoke, and
delivered in bursts short enough to be retained verbatim in short
term memory.

It seems to me that the speed limit is still set by how fast you
can put the information on paper, IE a mechanical limitation.
The brain would only be serving as a short term buffer for the
text until you could transcribe it. For continous text copy,
it seems to me that you would fall further and further behind
until the buffer overflowed.

>
>Does anyone know the rules and regs about operating amateur radio
>equipment from an aircraft? One ham I talked to seemed to think the FAA
>might have some problems with this...

The use of amateur equipment is at the disgression of the operator
of the aircraft. In the case of commercial aviation, the operator
is the *carrier*, not the pilot. In the case of private planes, all
that is required is the permission of the pilot. Interference with
any aircraft system is immediate cause to cease operations. For
commercial carriers only, the *particular* piece of equipment must
be certified not to cause interference to the *particular* aircraft's
systems before airborne operations may be permitted. Thus the general
attitude is "forget it" because the testing required to make this
certification would take the aircraft out of operation for too long
a period. The FARs take a slightly more casual attitude with private
aircraft operations.

Voyager had amateur equipment on board for their round the world
flight. The rules for experimental aircraft are somewhat different,
and somewhat more relaxed, than for even ordinary private aircraft.
However, I seem to recall that the FAA recently made a rule about
operation of electronic devices during the takeoff and landing
portions of a flight that may even limit use of amateur radios in
private and experimental aircraft.

There are lots of "not nice" things you can say that won't run afoul
of the FCC's obscenity standards (and even those are under periodic
court challenge). It's not yet illegal to be Politically Incorrect
on amateur radio. For example, I could tell the one about the priest,
the minister, and the rabbi, which you might find offensive, without
violating FCC rules.

>I would appreciate anyone else's opinions on this.

Even bulletin stations are still subject to monitoring to see if the frequency is in use before transmitting. However, the ARRL does not do this, and neither does K1MAN. K1MAN does other things, such as threatening people who transmit on "his" frequency during his broadcasts, which the ARRL does not do, but both are in violation of the rules by failing to respect existing QSOs on the frequencies where they fire up their broadcasts. (K1MAN operates under the same legislative loophole that the ARRL uses, and lobbied to get, so his basic broadcasting is legal, if despicable. What's not legal for *either* of them is firing up on top of existing QSOs.) A W1AW operator told me that it wasn't "feasible" for them to monitor each of the frequencies their automated broadcasting operation uses before the system fired up. I'm sure that K1MAN would use a similar argument. I don't consider that an acceptable reason for violating the rules for either of them.

>pass the DTMF on to the transmitter. Ask your owner.

We tried that on our (ACC85 I believe) what happens then is that it hears the clearing tone, sends part of it (since the decode time for that and the sending time of that tone aren't perfectly synchronised) and then the decoder on the ht sees *that* clearing tone as the first character of the DTMF string and still doesn't decode.

We can probably find a workaround, but haven't been sufficiently motivated to do it yet. However if anybody has a suggestion of how to do it, I'd like to hear it.

From: gdx@dcs.ed.ac.uk
Message-ID: <CyE54t.L1u@dcs.ed.ac.uk>
Source record: 257822

Hello,

I am involved with a repeater group looking into refubishing some of the UHF repeaters here in Scotland (GB3PG, GB3GL, GB3ML, and GB3OH in particular). Part of this refurbishment would include replacing the logic which in some cases is still run from discreet transistors!!!

During the summer I was on holiday in the US and was very taken with the logic on some of the repeaters I heard. I am particularly interested in Voice ID.

Is there a standard voice ID logic? Most of the ones I heard seemed to be similar. Does it come in a kit, or are there construction instructions around, and where can I get hold of them.

All help is much appreciated. Thanks in advance.

1482. Subject: Keeping in touch by Ham radio: round the world flight

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-28 16:29:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2EB0A8EE@smtp>
Source record: 257796

Possible answers:

By international regulations, radio communications identification has to follow country of registry. This applies to ships, planes etc. Thus if a plane is registered in the US, and has a NXXXX number (the N, like ham callsigns follows the US - ever see the tail of a commercial plane?) he must have a FCC amateur radio station license.
The FCC forbids ham radio operation in planes that are in the air, or about to take off. Thats is, commercial planes. However in a private plane, operation permission remains with the pilot (just like boats). Equipment must be separate from aviation equipment (just like boats).

Your friend would have to use his US call anywhere, suffixed by /AM (Aeronautical Mobile) until the point where he lands. If he lands on a country not under FCC jurisdiction, he then must have the permission of the host country (exception: Canada it is automatic) or a reciprocal agreement with that country. Since he is not going to land, this isnt necessary.
Depending where he is, ITU region 1, 2 or 3 he will be able to transmit in different frequencies. So if he is flying over Europe, 40 meter band is from 7.000 to 7.100, so he would have to adapt his frequencies accordingly.
Finally, there is an Air Traffic Control Net every day, contolled by W1BFA, on 14.277, run by Ernie in Maine. It starts at 6am Eastern and beams north east. Ernie can supply weather reports and air conditions 24 hours a day through the network of nets he associated with. He is linked to S&R teams over the US and Atlantic.
Just ensure your friend announes the info about his trip well in advance.

Message 95 Wed Oct 19, 1994
BIRDWATCHER [Gary, MI] at 21:28 EDT

Ever want to program a major shortwave station? Pick the kind of shows YOU want to hear?

Well here is your chance!

I have been asked by Adam Locke of WWCR to post the following:

To all WWCR Listeners:

This is your chance to let us know what you want to have more of. For months we have been doing country music to the world in the afternoons. Do you want this to continue, or would you like to have more talk programming during the day? Any favorite talk shows? Other ideas? Mail us a post card with the top five shows youwould like to hear during the day (no phone calls please).

EMAIL US at: NMKS01@PRODIGY.COM

Or write:

WWCR AFTERNOON PROGRAMMING SURVEY
WWCR AVENUE
Nashville TN 37218

Do it TODAY!!

Note: Please spread the word. Can someone post this on rec.video.shortwave and FIDO SW ECHO?

I can not access these conferences. Just repost the message.

I have already said what I would like. Also WWCR will be running their afternoon programming on a new lower frequency, so we can all HEAR it during the afternoon hours.

Corrections: E-Mail address is NMKS01A@prodigy.com
Street address is 1300 WWCR Avenue.

Program director is Adam Lock (no "e" at the end).

Hello everyone,

Lately Ive been thinking about getting the new TH-79A and selling my FT-530. It appears to be a very nice HT from what Ive read. I would like to hear any comments from TH-79A users on how they feel about that HT since they've owned it. The only complaint I would have with the FT-530 would be the receive audio. Other than that I have really enjoyed it. Its nice to hear from users of a particular rig before spending the money and finding out certain pros and cons about it later. Please send any replys directly to me. Thank you very much...

Bill, I use logic and like it. Part of the problem you had may be
multi-tasking (i.e, running it within windows). I typically use logic in
the dox environment and use the ability of logic to run the tnc in the
packet cluster at the same time. Using 486/33 with 4 meg Ram

73 and GL,
Jim KD0AV

|>
|> 1. My tuning in a W1AW transmission and listening to an ARRL bulletin.
|> 2. My tuning in a packet BBS station and reading an ARRL bulletin.

1. You listen, you are NOT in QSO with anyone.
2. You CONNECT, and are in QSO with the BBS.

1. W1AW has NO CLUE that you are listening.
2. You BBS KNOWS you are connected, and that the two calls are in QSO.

This really cannot be so difficult to understand?

138-144 is a public service band here in Ontario, Canada. You'll also
find some users between 148-150mhz. A lot of commercial gear is
138-150mhz and will cover the ham band without any mods.

SB NEWS @ AMSAT $SPC1031
* SpaceNews 31-Oct-94 *

BID: $SPC1031

=========
SpaceNews
=========

MONDAY OCTOBER 31, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited free distribution.

* ITAMSAT NEWS *
================
Due to heavy workload and the desire to turn to different interests, Alberto I2KBD, appointed Gianluigi IK2VOO as main command station and Stefano IK2OYD as backup for the ITAMSAT-OSCAR-26 satellite. After some training on the 20th of October, IK2VOO succesfully turned on ITAMSAT and exercised some onboard functions. Both transmitters (435.867 MHz and 435.822 MHz) were commanded on and some telemetry was collected. The spacecraft was found to be in good shape with the battery well charged and the main operating parameters in nominal status. After a week of tests, with the main purpose of better training in the commanding procedures, IO-26 was reset in preparation to the main software reload.

[Info via Alberto E. Zagni, I2KBD, of the ITAMSAT Command Team]

* FO-20 NEWS *
==============
On 16-Oct-94, the initial software loader was successfully uploaded to FO-20 by ground command stations. On 19-Oct-94, software reloading was completed by 0300 UTC and digital (Mode JD) transponder operation resumed.

The FUJI-OSCAR-20 satellite was launched four and a half years ago. Its storage battery performance is still better than FO-12 in its early days. The characteristics of batteries have changed gradually, and the setting of battery volatage of power control unit (PCU) has changed to level 3.

[Info via Kazu Sakamoto, JJ1WTK]

* MIR NEWS *
============
During the night between 11-Oct-94 and 12-Oct-94, the power supply voltage on the Mir space station sharply decreased. This is believed to be due to insufficient battery charging by the solar panels on Mir. All systems in

the base block discontinued functioning and it became impossible to control the attitude of the MIR-complex. It also became impossible to aim the communications antenna toward the geostationary relay satellite for contact with mission control.

During this period, a listeners in Europe were able to monitor quite a bit of activity on 143.625 MHz. Problems onboard Mir were reported and discussed, and the opinions of Russian specialists were varied. The VKS (Russian space force) spoke of a very complicated situation. Deputy Flight controller Blagov of TsUP blamed the age of the station, which has been in orbit since the beginning of 1986, while the PRO of TsUP sounded rather optimistic. He stated that the Euromir94 expedition will remain on schedule dispite the problems on Mir. Amateur communications have taken place over Europe, and it is hoped that this activity will become more widespread once the power problems on Mir are solved.

During the evening hours between 12-Oct-94 and 13-Oct-94, Viktorenko and Kondakova remained on duty and available if necessary. Meanwhile, a lot of recharging occurred and specialists hoped to be able to adjust the attitude of the complex in such a way that the solar arrays would function as efficiently as possible so that communications via the relay satellite would be restored. The cosmonauts did not panic during this period. Viktorenko and Kondakova even joked about the fact that the exchange rate of the dollar on board MIR remained stable, which could not be said about the voltages of their power supply systems.

[Info via Chris v.d. Berg, NL-9165/A-UK3202]

* DP3MIR UPDATE *
==========
German Astronaut Ulf Merbold, DP3MIR, has been active from the Russian space station MIR over Europe during last week during the evening hours. Unfortunately the power supply problem aboard MIR has prevented Ulf from using the Digital Voice Memory and this obviously reduces his activity to only a few passes a day over Europe. Precise information about this problem is not available, as all questions and answers regarding the HAM activity of DP3MIR have to be relayed via the Moscow control centre, which turns out to be very complicated.

DP3MIR will stay aboard MIR until about 03-NOV-94. It is hoped he will be active over other continents too. The QSL info is: DP3MIR via the usual German (DARC) QSL Bureau.

[Info via Norbert, DF5DP, DARC Coordinator Satellites and Space Projects]

* WEBERSAT-OSCAR-18 NEWS *
==========
WEBERSAT-OSCAR-18 controllers have noticed that the satellite has become increasingly more difficult to copy ovr the past several months. There is a weak but relatively steady tone of about 1200 Hz in the demodulated signal. A hypothesis suggests that this tone is due to a partial loss of carrier suppression in the Raised Cosine BPSK transmitter. Reception of

this transmitter (437.102 MHz +/- doppler) can be improved by adjusting the IF-shift of the downlink receiver. It is believed this improves recption by shifting the insufficiently suppressed carrier into the skirts of the IF filter, suppressing the carrier on the ground. Controllers are trying to find ways of fixing this, or working around it. They may also switch to the straight-PSK transmitter, 437.077 MHz, on occasion, which may now give better copy.

[Info via Bob Argyle, KB7KCL]

* RS-12 NEWS *
==========
Karsten Hansky, DL3HRT, reports that Ron, 7Q7RM is very active on RS-12. He can be heard regularly, especially on the weekends. His usual operating mode is CW, and his QSL manager is G0IAS. Karsten worked 7Q7RM two weeks ago, sent his QSL directly to G0IAS, and received a quick reply last weekend.

In the reply, G0IAS wrote that Ron typically calls CQ 15 minutes after LOS of RS-12. Then he usually has about 5 minutes to work into Europe when there is some skip on 21 and 28 MHz. Karsten heard Ron very strong on the 21 MHz RS-12 uplink from Germany, and his signal on the downlink was good as well (559). G0IAS wrote that 5Z4FM follows the same procedure to work into Europe, but DL3HRT has not heard him as of yet. Gary, C53HG, reported that he works RS-12 at times as well. Last month, DL3HRT worked JW, 4X, EA8, OY, and 9H on RS-12. He is also looking for contacts into the East Coast of the United States via RS-10.

[Info via Karsten, DL3HRT]

>Is it appropriate or not to state a call with a double letter (i.e., xy8ppq)
as xy8 double pq? An older Ham indicated this was not proper. Seems minor, with all the imaginative phonetics heard and people who say zed for the z in thei
>in their calls...which is supposed to be some fancy british pronunciation?
>What does the group think?

I think that to refer to a British pronunciation as "fancy" is very parochial. The Zed pronuncation is the way the British pronounce it, and since British English pre-dates the American variety by several hundred years, I suggest that if anybody is being fancy, it is the Americans with Zee!

Source record: 257735

Using "double" <character> or "triple" <character> doesn't bother me nearly as much as some folks I've heard who read their calls in a fashion such as: a-a-one-h-and-an-x (to use my own call as an example) or n-one-z-l-and-a-z. The word "and" sounds like the letter "n", causing no end of confusion.

Source record: 257737

I question the use of "double - p", etc., in spoken callsigns. If your call was N0AUU, what would you say? How long do I sit there wondering if your call was KA0AUU, or KA0AW? The goal of spoken communication is to communicate as clearly as possible. Unexpected changes in expected transmissions muddy this goal.

Same with my call -- N0ZAU. I almost always say "zed", because if I don't, about 1/3 of the replies wonder if I said "zee" or "cee".

Paul Marsh N0ZAU Omaha pmarsh@metro.mccneb.edu

Source record: 257739

Gary, I suspect that we're very close to the point where I thought we might end up; we all have anecdotal and/or personal experience which bears on the overall question about how fast can an operator copy this or that, but it seems to me that the synopsis of this date is that, since it involves the human brain, we may *never* fully understand the mechanisms and, in fact, the mechanisms may vary from individual to individual. What this suggests is that it is very dangerous for anyone to take a "blanket" approach, such as "after a certain speed, such-and-such happens" because it may happen to some, itmay happen only partially, or it may not happen at all.

Probably the best we can do if we want to be really high-speed operators is (a) learn to touch-type accurately, (b) learn to copy behind, (c) learn to copy "subconsciously" (without "reading the text," as it were), and (d) hope for the best and accept whatever wall we hit. So, I'll stop thinking about "the mechanisms" and spend more time on developing "the skills." Actually, it's a lot like playing the banjo (which I've been doing one year longer than I've been a ham) in that I don't care *how* my brain learns to "hear" those 16th-notes and became able to distinguish licks and runs and not just hear them as a babble of notes, I only care that somehow it *does*.

But, you were right when you said that code isn't a language; it is just a representation, just as "sign language" is merely a visual representation of words and phrases. In fact, in some respects code is a lot like sign language when we use Q signals to represent entire thoughts, abbreviations for words, etc.

Have a great weekend, and thanks to everyone who participated in this thread!

>decodable? I would think so, eh?

The rule applies to the obscuration of message content. If the PGP
signature is intended to validate the sender's signature, then it would seem
by verifying the sender that it accomplishes the exact opposite purpose and
would therefore not be a rules violation.

One thing, please do *NOT* ask the FCC (ref. OO thread)

While this is true, there are these additions:

1) Anybody who ALREADY has a license wouldn't be using someone else's.
I don't know why, they just don't. Must be because what's the
point in doing so.
2) Last I knew, it was $10,000 dollars; and almost guarenteed
imprisonment.

Doesn't sound like something to do for fun. =)

SB QST ARL ARLB088
ARLB088 Resolution becomes law

The ARRL's joint resolution supporting Amateur Radio was signed into
law by President Bill Clinton on October 22, 1994.

The resolution passed both houses of Congress on October 7. The new
law, PL 103-408, asks for ''reasonable accommodation'' in the
operation of Amateur Radio in homes, automobiles and public places.

More information on this successful League initiative appeared in
QST for September, October, and November.

ZCZC AP58
QST de W1AW
Propagation Forecast Bulletin 44 ARLP044
From Tad Cook, KT7H
Seattle, WA October 28, 1994
To all radio amateurs

SB PROP ARL ARLP044
ARLP044 Propagation de KT7H

Solar flux was down slightly last week. There was a disturbance centered on October 23 when the A index was 41. Conditions were stable until October 22, and then the K index started climbing. By the next day it had reached six, and conditions did not stabilize until late on the 25th.

Solar flux should drop gradually until the first week in November, then reach 90 again by mid month. Unfortunately, poor conditions are forecast for the DX contest this weekend, but the disturbance may not occur until late in the contest on Sunday. Poor conditions should continue for the next few days.

Sunspot Numbers for October 20 through 26 were 75, 62, 55, 35, 37, 30 and 78, with a mean of 53.1. 10.7 cm flux was 90.1, 87.8, 85.5, 84.2, 82.2, 89.5 and 92.6, with a mean of 87.4.

Some correspondents have asked why the solar flux quoted in this bulletin sometimes varies slightly from that given on WWV for the same date. An example is October 18 when we gave a solar flux of 90.5, but WWV reported 90 instead of rounding off to 91. Since the observatory in Penticton, BC reported 90.5 for that date, the only obvious conclusion is that the Space Environment Service Center is sometimes using funny rules for rounding numbers. An example in this report would be October 25 when Penticton reported 89.5, and WWV reported 89 instead of 90. Yet on October 22 when the flux was 85.5, WWV reported it as 86, which is the conventional approximation.

The path projection for this week is for the center of the United States to Central Europe during this weekend's DX contest.

80 meters looks good from 2300 to 0730z, and 40 meters from 2200 to 0900. 30 meters should be open from 1400 to 1600 and again

around 1900 and possibly 2100. 20 meters should be good from
1500 to 1900. 17 meters may be open some days around 1600 to
1700. 15 meters and above does not look promising at this time,
although there is a chance of openings on 15 meters around the same
time as a 17 meter opening.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 OCTOBER AND FORECAST FOR 29 OCTOBER - 31 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 97/44

GOES satellite data for 27 Oct
Daily Proton Fluence >1 MeV: 4.6E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 7.7E+08 (high)
X-ray background: B1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Oct 30 Oct 31 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Oct: 98/45

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 27 Oct
Learmonth 5 2111 3112
Fredericksburg 4 4
Planetary 8 7

Observed Kp for 27 Oct: 2232 3211
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Oct 15 Quiet to unsettled, possible brief active periods
late in the UT day.
30 Oct 40 Active to minor storm
31 Oct 30 Unsettled to active
COMMENT: IPS Geomagnetic Warning 8 was issued on 27 October and is
current for interval 27 October to 4 November. Expected disturbances
due to a flare on the 25th did not occur.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Oct normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Oct normal normal normal
30 Oct normal normal normal-fair
31 Oct normal normal-fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
28 Oct 41 about 20% above predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
29 Oct 40 15 to 30% above predicted monthly values
30 Oct 30 About 15% above predicted monthly values
31 Oct 10 Near predicted monthly values
COMMENT: IPS HF Communications Warning 9 was issued on 27 October and
is current for interval 27 October to 4 November.

```
: |> "all" or a like form of "all" (MUSIC, SEWING, CRAFTS, NAFTA, etc.)
: |> indeed informational bulletins?
: |>
: |> Is there a difference between:
: |>
: |> 1. My tuning in a W1AW transmission and listening to an ARRL bulletin.
: |> 2. My tuning in a packet BBS station and reading an ARRL bulletin.
:
: 1. You listen, you are NOT in QSO with anyone.
: 2. You CONNECT, and are in QSO with the BBS.
:
: 1. W1AW has NO CLUE that you are listening.
: 2. You BBS KNOWS you are connected, and that the two calls are in QSO.
:
: This really cannot be so difficult to understand?

Again, the acks for the ax.25 protocol are little more than the op at W1AW
looking at the power meter and seeing that watts are going into the antenna.
The acks mean the data is reaching the other BBS but we don't know where the
bits might go from there. All we have in ax.25 is a remote wattmeter.

What's to understand? It seems like people keep trying to assign intent
to the receiving station ... but intent for what? Why take a bulletin that
walks like a _bulletin_ and talks like a _bulletin_ and call it a "message"?

All bulletins are broadcasting. They are sent in many directions. When being
forwarded, the receiving station did not ask for them. The sending station
has no expectation that the receiving BBS will read or reply to them.

73,
Steve

1512. RE: round the world flight

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-29 00:16:07 UTC
From: n9315@pnet16.navy.mil
Message-ID: <CyErEw.572@nctams1.uucp>
Source record: 257761

There is no reason it can't be on board. Of course the pilot/operator must be licensed. He will also want to check for operating permission in the airspace of countries other than the one they are licensed in.

It wasn't mentioned if there was HF or VHF coverage prefered, this can be important. HF would help for the international waters/remote area comms, but even the VHF at altitude has a good coverage area. Either way the operator would sign as ****/AM (Aeronautical Mobile).

The FCC states (I believe) that permission must be granted from the pilot of the aircraft for aeronautical operation.

Another item, have the radio(s) installed into the aircraft, as part of the airframe it's less likely to produce interference. This does have to be checked upon installation.

1513. Newbie questions

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-29 00:29:44 UTC
From: gbrewer@neon.icsl.ucla.edu
Message-ID: <CyEs1q.DBq@seas.ucla.edu>
Source record: 257756

I am a Newbie to everything. I have a friend who got me interested
in amateur radio. I have studied the questions for technician and
novice. I am now just starting to work on my code so that is
why I have several questions that hopefully somebody can
help me with....

1) I need to find out when/where are the tests given for
novice/tech in the L.A. preferably the Hollywood area.
Also I would like to know how much it costs to take the
tests.

Does anyone know this information? Anyone?... Anyone?... Ferris?
Because if the tests aren't given too frequently, I can just
try to work on my code and get my tech-plus and skip the nocode.

2) Where can I get the code practice software? My friend has
it but only for the mac.

3) What's W1AW? .... I realize it is a call sign but for what?

4) What is an electronic keyer with side paddles?

I appreciate any help you can give me.

Please help a poor and unfortunate student get his call sign and
that way he can add more stuff to his .sig =8^)

Thanks,
Brew

1514. Don't Let PRB-1 Die On Long Island -HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-29 02:34:37 UTC
From: hmn@panix.com
Message-ID: <38scbt$378@news.panix.com>
Source record: 257760

R.A.D.I.O., (The Radio Amateurs Defense & Information Organization) needs your help. Possibly you have seen the story in print
or heard about it on Newsline or your local repeater: The Town of Hempstead, in New York State has taken a strong stand against
amateur radio. They have decided to try and regulate the emissions of amateur radio operators. In October 1993, the Town of
Hempstead on Long Island NY denied the request of NK2T for his 55 ft radio tower. This tower was installed back in 1984
with authorization of the town. Then an RFI complaint came in from a neighbor. The town decided to come after NK2T and order
him to either go for a full varience hearing. A hearing was held and the request for the permit was denied. The original permit
allowed Mark to a 30 ft. tower. After PRB-1 was passed Mark decided to raise his crankup tower to the 55ft height. Prior to raising
the tower, Mark approached the town officials and they told him not to be concerned since the original installation was approved.

So $20,000 later and a full blown lawsuit going on, NK2T still has not received authorization to keep his radio tower. The R.A.D.I.O.
group was formed to help defray the costs of this legal suit and ultimately help change the laws in the Town of Hempstead.

We need all the support we can get form the amateur radio community. If you would like to support us our addres is

Listen, what YOU do behind the closed doors of YOUR bedroom (or car, or men's room stall) is YOUR business, it certanly is not grounds for starting a radio club all for yourself. If I started a radio club only for heterosexuals, or only for whites, or only for green eyed half Polish half Irish people who talk with a lisp, it would still be wrong. Amateur radio is NOT meant to promote anything of the sort. If you want to have an all homosexual club of some sort, your more than welcome to, but using the Amateur radio service as a platform for promoting your sick lifestyle is just not proper.

Like I said, keep it in YOUR bedroom, and no one has a problem with it, you don't see me screaming from the mountaintops "I'm HETEROSEXUAL" give me my own radio club, do you?

I started out in this hobby as a No Code Tech, so this is my no means No code bashing. The bottom line is this: If you want access to HF bad enough, you'll take the TIME and EFFORT to learn the code. Two things that people think are a factor in learning code are;

1: age
2: Intelligence

I'm hear to tell you this is bull. If you want to learn code there is only one way. Practice, practice, practice. It's been proven that the most learning impared and low I.Q. folks can learn to copy code, and if I can learn how to do it, trust me, you can do it to.

Try doing something for yourself, instead of whining for something to be given to you and you will gain something you never knew before. The satisfaction of being able to say "Yeah, it was tough to learn the code, but I did it, I BEAT it"

Once you have that, no one can legislate it or steal it from you, it's yours forever!

That's only true if you no longer are the copyright holder.
(i.e. if when you contracted to provide the articles, you agreed
to surrender the copyright to the publisher).

> Second, I want people to
: >actually read the article in the magazine or as a reprint. There are
: >some nice examples and sidebars you would be missing if it were posted here.

Great strides are being made with graphical presentation over
the Internet. Presumably, as an internet guru (that's a compliment
not a sarcastic remark) you've probably already seen Mosaic
information sites which could be a great way to make your
articles available.

: >Neither I nor anyone else can stop someone from doing this, but I
: >certainly won't.

Certainly, no one should do that unless they have permission
from the copyright holder.

: >Believe me. The series is worth reading in the magazine or in reprint form.
: >The responses I've already received have proven that point.

How about sharing some of those responses that may be of interest
to us in this newsgroup from the ham radio perspective?

: Too bad someone can't convert the articles to html,, sidebars and all
: through links, and put it on your nice www server.

Oops, I posted my mosaic comments above before getting to this comment.

I have uploaded to SimTel, the Coast to Coast Software Repository (tm),
(available by anonymous ftp from the primary mirror site OAK.Oakland.Edu
and its mirrors):

SimTel/msdos/hamradio/
ccats130.zip CountyCAT: Ham Radio county hunting database

CountyCAT is a small, easy to use database to aid county hunters in their
quest for the CQ County hunters award. It will track your progress and
help you with the messy paperwork that plagues all ham radio awards.
CountyCAT is not a logging program, there are many good loggers on the
market. It is a database designed to work alongside your favorite
logger.

Special requirements: Hard drive recommended

Changes: Improved the error handling. Made numerous cosmetic changes.

ccats130.zip has replaced ccats120.zip.

ShareWare. Uploaded by the author

Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac and OS/2 files available. I'm
always on the look out for more (particularly Mac and OS/2). See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. If there are a series of
files you want to order, stretch them out over a few days, rather than
ordering all at once. That way, you are almost assured of getting them
all, and you won't be blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/00-INDEX.TXT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

00-INDEX.TXT is an index of the files and the directory they are in.

If you are using a PC and you do not have UUDECODE, follow these steps:

1. Order UUDECODE.BAS or UUDECODE.C, and UUEXE524.ZIP.
2. Compile UUDECODE.BAS or UUDECODE.C on your system.
3. Use the resulting executable to UUDECODE UUEXE524.ZIP. UUEXE524 has documentation about UUENCODE/UUDECODE.

You are all set to start ordering binary files from HAM-server.

Some Reasons Why Ordered Files Are Not Received:
==========

1. Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know.

2. You have spelled the file name incorrectly.

3. The file name has changed since the INDEX was generated. Order a new INDEX.

4. You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

Try the PING command to check that the path is open.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS and OS/2) or binhexed (Mac) to incoming@grafex.sbay.org. This email address is set up to flag me that there is something new that I need to take care of quickly.

I'd like to hear what all these folks are building, since beginning builders who don't have access to HF (where the great majority of beginning building has always occurred) are such a new phenomena to ham radio.

: have access to internet with the HAM radio?

: If so, who do I contact to set it up and what special gear will he need
: on his end.

I would be very surprised if someone came up with a workable solution for what you are proposing. Here are two alternate suggestions for your consideration...

1. Take a crash course for the general class exam, take the test, buy some HF equipment, erect an antenna, all by January (probably impractical).

2. Find a neighborhood ham operator willing to invite you over for scheduled contacts with your parents.

3. Have your father make a regular schedule with a fellow ham who has internet access. He can dictate messages to the ham who can then enter them as e-mail messages to you.

I think Suggestion #3 has the best chance of success. Your father will know which band is best to operate on, and probably already knows some fellow hams with internet access.

Good luck! Andy-K4ADL

>

Sidebar note, the longest running US round-the-world aircraft trips carrying AR are probably those of the space shuttle. For the SAREX-II project, around six hams went to the cape to verify EM compatibility. Four lucky ones got to dress up in bunny suits and venture to the flight deck to bang packets back and forth against the TNC setup on the workshop floor.

Close but no cigar.

Zed isn't "fancy british pronunciation" or "just tradition". It's the way
every english-speaker (and many others) in the world except Americans
pronounces the last letter of the alphabet. Sort of like the way we all write
dates as day/month/year...

Did you get any traffic tickets during the year, and give the cop your
residence address? If so, that's probably how they found out, since they
get copies of the tickets.

Send an e-mail to info@lbc.com for information on internet/ham gateways. Basically, any ham using amtor or another bbs can send e-mails to anyone through the gateways. The gateways also accept e-mails to ham bbs's IF the sender is (1) a licensed ham AND (2) registered on the gateway. I have been communicating this week with aa6lf, a maritime mobile in Tonga, through this method. We route our communications through a New Zealand HF station. It works!

My questions: Does anyone know how the third-party rules apply to this?

Also, does anyone know how to get a AEA pakratt 232 using PC pakratt to generate the "@" character? Apparently the hardware can do it, but the software won't.

Essentially correct. In Europe we tend to call the four character
references "locator squares", or just "squares". During contest and dx
(and not so dx) working six character references are exchanged. However,
it is all the same system, world-wide.

I have a filing drawer full of info and a disk full of programs to do
things with locators; dating back to when I invented the system in 1979
or 80.

I have a couple of short Basic (well, QBASIC) subroutines which I use
in my quick and dirty programs for conversion between locators and lat-
long. I'll post them if there's any demand. It really is very simple -
that being one of my design goals at the time. I may be able to dig out
my orginal ASCII description of the system, if anyone is interested.

There was a system ("QRA") which predated "Maidenhead", but which was
used only in Europe and the nearby edges of Africa and Asia. It is
rarely heard now.

Hmmmm.... ICOM? I had two IC-2AT's that ended up with this problem.
After LONG times at the Icom service center when they tried to tell
me over and over that nothing was wrong, my dealer put it in the freezer
for me and pulled it out and - it didn't work. Icom Service wouln't
try this - but after my dealer complained they took it back embarassed
and found a CRYSTAL that failed because of the cold. That was the problem,
because I lived in Maine and bicycled a lot in the winter, and the IC 2AT
worked fine after that in sub zero conditions. Icom may have had a bad
batch of crystals. They were somewhere in the synthesizer circuit, I
believe. Suggest that to the Icom service center nearest you.
Tell them that you rely on the radio for search and rescue, that might
help.

Good luck.

From: jeffrey@kahuna.tmc.edu
Message-ID: <CyGCH1.JEL@news.Hawaii.Edu>
Source record: 257684

Someone was looking for Motorola Mitreks for 420 MHz - that same
company, Tele-Path Corp., is selling Mocom 70's for $19 each
in quantites of 5 or more; 450-470 MHz, CS, 4 freq., 25 Watts.
I realize there's a bit of a difference between Mitreks and Mocoms
but for $19 each, maybe you could compromise your requirements...

How difficult is it to get channel elements for the ham bands for
a Mocom? Will Jan or International make these? Are these elements
xtals or more complicated than just an xtal?

Hello everyone! I need your help.

I would like to conduct a survey of power-supply owners here on the net.
I will post the results after a week or two if anyone is interested.
Please send any replies privately to me here, or if you have E-mail
access send to "andy.moss@canrem.com". If you have more than one power
supply that's great and I'd love to hear about them all! Okay, here's
what I am looking for:

- Brand of supply and model number (of if you made it let me know!)

- Current rating if you know it

- Briefly why you chose this supply (or these supplies)

- Good and bad things (if any) about this/these supply(ies).

Thank you very much and I do appreciate it!

Cheers!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 OCTOBER AND FORECAST FOR 30 OCTOBER - 01 NOVEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 98/45

GOES satellite data for 28 Oct
Daily Proton Fluence >1 MeV: 6.8E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 8.7E+08 (high)
X-ray background: B1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Oct 31 Oct 01 Nov
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Oct: 98/45

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: storm levels

Estimated Indices : A K Observed A Index 28 Oct
Learmonth 37 4345 6632
Fredericksburg 42 2
Planetary 50 6

Observed Kp for 28 Oct: 1232 2122
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 Oct 50 Active to minor storm
31 Oct 30 Active
01 Nov 30 Active
COMMENT: IPS Geomagnetic Warning 8 was issued on 27 October and is
current for interval 27 October to 4 November. The observed
disturbances today attributed to a flare on the 25th.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Oct normal normal-fair fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Oct poor poor poor
31 Oct fair poor poor
01 Nov normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
29 Oct 43 15-30% enhanced until 21UT, 15-20% depressions
observed thereafter.

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
30 Oct -10 15 to 30% below predicted monthly values
31 Oct -10 15 to 30% below predicted monthly values
01 Nov -10 15 to 20% below predicted monthly values
COMMENT: IPS HF Communications Warning 9 was issued on 27 October and
is current for interval 27 October to 4 November.

Seems to me that if the FCC found what people are posting on packet (topics unrelated to ham radio, but no "business" traffic or dirty words) objectionable, we would have heard about it by now.

Back a few years, someone did get into trouble for posting a message something like "Call 1-900-xxx-xxxx if you don't like the Gulf War" because the 900 number operator would make money from it, ie, "business". The FCC doesn't seem to mind it when hams transmit space shuttle audio on 2meters. That seems to be a kind of one-way "broadcasting", but it's just information, no urging someone to "repent", or to buy or do something. I suspect the "no broadcasting" rule is to prevent some people from getting on a freq and blabbering about religion or some such all day long, creating QRM. Aside from the backbone of packet nets, the body of packet postings get transmitted only someone asks for it. Which doesn't trash up the band like a long winded "broadcasting" ham would.

I don't think the FCC is concerned about packet postings, as long as there is no "pecunary(sp) interest" or dirty words in them.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Even bulletin stations are still subject to monitoring to see if the
: frequency is in use before transmitting. ...
: but both are in violation of the rules by failing to
: respect existing QSOs on the frequencies where they fire up their broadcasts.

Not true. While it is illegal to intentionally interfere with other
transmissions, there is no legal requirement to listen before transmiting.
If you disagree, then cite the regulation. (It doesn't exist.)

: (K1MAN operates under the same legislative loophole that the ARRL uses, and
: lobbied to get, so his basic broadcasting is legal, if despicable.

Any licensed amateur may "broadcast" code practice or information bulletins:

97.111 Authorized transmissions
...
(b) ...
(5) Transmissions necessary to assist persons learning, or
improving proficiency in, the international Morse code; and
(6) Transmissions necessary to disseminate information bulletins.

You may be thinking of the special regulations that affect paid operators:

97.113 Prohibited transmissions
...
(b) No station shall transmit messages for hire or for material
compensation, direct or indirect, paid or promised. The control
operator of a club station, however, may accept compensation for
such periods of time during which the station is transmitting
telegraphy practice or information bulletins provided that:
(1) The station transmits the telegraphy practice and information
bulletins for at least 40 hours per week;
(2) The station schedules operations on all amateur MF and HF bands
using reasonable measures to maximize coverage;
(3) The schedule or normal operating times and frequencies is
published at least 30 days in advance of the actual transmissions; and
(4) The control operator does not accept any direct or indirect
compensation for periods during which the station is transmitting
any other material.

Sorry to inject actual facts into this discussion. I hope it doesn't
violate some implicit Internet rule. :=)

>>Try doing something for yourself, instead of whining for

something to be given to you and you will gain something you

never knew before. The satisfaction of being able to say

"Yeah, it was tough to learn the code, but I did it, I BEAT it"

Once you have that, no one can legislate it or steal it from

you, it's yours forever!<<

Well, don't know who's whining, but after passing my tech exam last month and receiving my ticket a week ago, i'm too tickled to indulge in those things you mentioned.

I do admit that my goals were a little ill defined before passing the test. Everything looked & sounded like fun & I figured I'd sort it out after accomplishing job 1: get the ticket.

Now I've decided that I'd like to pass the general. Think I'd have a fair shot at the theory after a few weeks study. Not nearly so ready with the code, de despite early am (before work) and evening "practice" sessions. It's kinda boring and kinda fun. Definitely fun for those characters i have "down pat". But, I can tell it won't be anytime real soon that I'm 13wpm ready. So maybe I'll take the theory test, try the code and then settle for tech plus with a year to work on the code. That sounds like a plan doesn't it?

Anyhoo, take it easy & don't eat too much of your kids halloween candy (if you have any, that is). No that's a subject I could whine about!!!....:)

I think that to refer to a British pronunciation as "fancy" is very

parochial. The Zed pronuncation is the way the British pronounce it, and

since British English pre-dates the American variety by several hundred

years, I suggest that if anybody is being fancy, it is the Americans with

Zee!....Said Peter Jones

My apology to anyone the characterization of "fancy" offended. I wonder though if your sensitivity was bruised, why you felt the need to reply in perceived kind.

Also, its not anything the british say that i consider fancy. It's pretentious adoptions by others for effect that can be amusing. Zed for Z in call identification does not fall into that category. I don't care how the british pronounce it. It's usefulness in differentiation from c and other similar letters justifies its usage.

Finally, I can be parochial since I went to catholic schools (joke, if you didn't get it....

>that somehow it *does*.

I think that's right, but I did go dig out some books on brain function to see if I could shed some light on the subject. What I found was that the experts aren't sure how the brain does these things either, though there are some clues. The brain is a marvelous complex of interconnected neural networks. I found it interesting that sensory input is crosswired in the brain with input from sensors on the left side of the body wired to brain centers on the right, and with sensors on the front wired to the back. Output controls are also crosswired in a similar manner. There doesn't seem to be any reason to do this, until you look at the wiring more closely. The wiring is all routed through the cerebellum where automatic reflexive activities are controlled.

It appears that much of the processing of information occurs *along the way* to the major brain centers, and if the same processing is repeated over and over, certain sets of synaptic knobs develop lower firing potentials so that eventually action/response pairs become shorted in the cerebellum and become automatic reflex. THe conscious centers of the higher brain levels are bypassed completely. This is how athletes develop their amazing skills. One reference says that if you

consciously try to think about what you are doing, you'll temporarily lose that marvelous coordination. Some people seem to have better coordination than others, and that's probably a result of differences in the way the firing potentials adapt in their cerebellums under conditioning. So one would expect that some people would have natural in-born abilities to easily develop automatic action/response patterns while others would not. I'd also reiterate my previous advice about learning Code, don't think about it, just drill!

Another interesting factoid is that while the eyes have whole regions of the brain devoted to processing their input, the occipital lobes, the aural sense is wired to the temporal lobes, IE they are mingled with the time sense and sense of rhythm of the brain. This is logical when you think about it. Our abilities to deal with music and rhythm are intimately connected to the aural senses. I've maintained for years that people with musical talents do better at Code than those relatively lacking in those talents. This fundamental structure seems to bear that out.

Another interesting thing is that while sensory inputs, and motor skill responses, are cross wired and paired, the language centers are isolated in the left hemisphere at a higher level in the brain hierarchy, above the cerebellum and in the cerebrum. There are two regions in the left hemisphere that control language skills. Broca's area is the region where vocabulary and grammar originate, and Wernicke's area is where meaning and comprehension are derived. The Arcuate faciculus connects the two regions, and if that link isn't strong, people have trouble expressing what they mean, or understanding the meaning of data presented to them.

Note that these language centers are higher functions and don't directly interact with the sensory regions at all. Nor do they communicate directly with the cerebellum switching centers. A longer and much more indirect pathway has to be traversed to get from sensory input to the language centers than from action/response pairs tied together in the cerebellum. This also makes sense because reflex action is always faster than reasoned response.

Wernicke's area is particularly interesting because certain discrete neuron complexes seem to be associated with certain symbol patterns. These appear to be pre-wired from birth in humans to recognize certain patterns. That's why all human languages are made up of only a few distinct symbol patterns, and basically the *same* patterns for all languages. It's never difficult to discern human speech from other sounds, though if you don't understand the language it may have no meaning. Natural human speech sounds are never monotonal, rather they are all complex patterns with a frequency as well as temporal domain. That's because the parallel pattern recognizing complexes are wired that way. That makes Code's monotones with pure temporal

ordering a very unnatural structure for the complexes to recognize.

Another brain area, the hippocampus, plays a vital role in memory and learning. It's the hippocampus that's responsible for laying down long term memory. If it is damaged, people suffer a condition where no new memories are laid down, IE they are always meeting people for the first time because they can't remember their last meeting, but they can remember things vividly from the period before the hippocampus was injured. A critical item about long term memory is that it takes time to develop. It takes at least half an hour to lay down long term memories. This has implications for training. Training periods shorter than half an hour do little long term good, and testing prior to the elapse of at least half an hour from the last training period has no real meaning.

The seat of short term memory is much more elusive, and I can't find any agreement among the experts as to where it is located or how it functions. This is the most disputed area of memory, and impacts on the idea of "copying behind". I have to say that not enough is known about this brain function, at least not in my references, to draw any hard and fast conclusions about how to best exploit it.

Perhaps this layman's journey through the brain throws some light on how Code is likely processed, and perhaps some of the factoids may offer a bit of guidance in how best to approach it. It reinforces my idea that the quickest method to copy to paper is the totally unconscious reflex response, and the only way to do that is by mindless drill, drill, drill while disengaging the higher brain centers. It also emphasizes the need for blocks of time devoted to training. And it emphasizes that the ability to do Code well is at least partially determined by in-born talents (IE brain pre-wiring and synaptic knob thresholds) possessed in varying degrees by different people. Code should be approached like any other athletic skill. Practice, drill, and repetition are needed to acquire the skill, and some people will have inate advantages over others in their ultimate degree of mastery. Effort alone is not enough, all people are *not* created equal in this regard, despite political retoric to the contrary.

> into an address base on a nameserver based upon my callsign?

Both, they aren't mutually exclusive. However, to ease routing in local switches, it's better if your address follows the local cluster routing convention. Otherwise a separate table entry has to be made for your station in each switch. That implies that if you move to another area, you should get a new number that's in the block in common use in that area.

This is a practical rather than theoretical requirement, however. In theory, you don't ever need to change IP addresses. The way most routing is done in current switches, however, makes it easier if you do.

> 2) Do I have to have a station up shortly after i get the IP
> or can i just get the IP and hang on to it until i get the
> station up and running?

There's no requirement that you do so. However, it's better not to tie up address space unnecessarily. We're not about to run out of numbers, but still it's better not to hog them if you aren't going to use them.

What you don't seem to realize, Jeff, is that the 450-470 Motos
are *different* from the 420 models. There are several changes
that must be done to the transmit and receive decks to move them
that far which are *not* trivial. Hence your pointer is not too
helpful.

>How difficult is it to get channel elements for the ham bands for
>a Mocom? Will Jan or International make these? Are these elements
>xtals or more complicated than just an xtal?

They're a bit more complicated than just a crystal, but never fear,
channel elements are as common as dirt, and getting one re-crystalled
is a snap. I'd note, however, that $19 seems a little high for a
Mocom. They are very old, and very obsolete. I wouldn't bother with
anything older than a Micor, and even they are becoming a problem
in regard to replacement parts.

Gary

Jeffrey Herman (jeffrey@kahuna.tmc.edu) wrote:
: The 10-minute ID is what I had in mind, Dana. But I still wouldn't test
: the FCC regarding this. Along these lines:

: Here's a cute anecdote provided by Chuck K5FO: During the late 50's,
: the phrase `Shave and a haircut - two bits'' became popular on
: either the broadcast AM radio or TV (might have been a commercial).
: Hams started using the first part (. ... .) in place of CQ on
: HF. Another station hearing the psudo-CQ would answer with the
: ``two bits'' part: . . and the QSO would then take off. This
: got very popular with US hams but the FCC took a dim view of it
: and started handing out lots of pink slips. The dit dit is still
: retained on HF today - you'll hear a CW op end a QSO with that.

: Why would the FCC not like the . ... . / . . exchange in
: place of CQ and the proper response? Only recognized prosigns
: are to be used on CW. Thus, I wouldn't test the FCC regarding
: sending an A or N or T in place of 1 or 6 or 0, respectively,
: with regard to a callsign exchange.

This (the shave & a haircut story) sounds like pure myth to me.
Anyone have any actual references (i.e. QST articles/story) to
back up this claim? Not meant as a flame, just want to
validate this story.

: When you say "XY8 Double PQ" you are "legally" implying that your callsign
: is XY8DPQ instead of XY8PPQ.

That's correct. Its probably technically not legal to ID that way. Back
in the CB craze of the 70's, I knew a guy who was fined $50 (back when
the FCC actually paid attention to CB radio) for identifying his station
KKZ-0007 as "King King Zebra Triple Zero Seven" .

Hmm. For realtime work, moonbounce might be a possibility, or a world record opening on 6 meters. Neither is very likely, however. For non-realtime messages, packet is clearly the way to go.

Personal Comment
It was over 2 years ago that Dale Cary decided that Newsline should be distributed in a text version to computer networks, just like the weekly RSGB, SCDX and even the ANARC SWL NET. When Dale joined Genie and began posting it up in the Round Table, I asked him and Bill if I could redistribute it into the Internet, (since Dale had no access to it at the time), and into other services.

In the year that I've been redistributing Newsline into cyberspace, I've received quite a few nice thank you's for putting it up on the boards. To this I have to, in turn, thank Dale and Bill for letting me do it.

Two weeks ago I rewrote my information opening to simplify it and to properly express the Newsline policy about distribution of the text version into the PBBS system. As you will find when you read on, I've rewritten it again today to further clarify it. Neither Bill, Dale, or myself have access into Packet so it seemed right for me to allow anyone who wanted to put it into radio distribution to do it.

It turns out that some of the "Packet Police" have decided, for whatever reason, that Newsline doesn't belong there, or is too long, is commercial, (even though Newsline is nonprofit), is off-topic, etc. Worst of all some posters have added comments Newsline text.

There also seems to be a problem of multiple postings on the network which is also getting on SYSOP nerves as it uses much needed space on the hubs' hard disks. This is an internal problem and the posters should come to an agreement as to who is going to forward it. If it continues we will make a decision as to what gateway will be the exclusive distributor.

As a result of all this, these "cops", they have blitzed Bill's FAX machine with warnings and other negative bullsh*t. This puts me and Dale in the middle and we don't like it. If you don't think that Newsline should be on packet, then send your flames to the message originator who forwarded it into the network, not to Bill. If you don't get satisfaction or don't like what is in Newsline then send your E-Mail to me.

Bill Pasternak has absolutely nothing to do with the text version, we do. Bill is the producer and is responsable for the Copyright and what can be done with it. If he tells us "no more", these computer messages will disappear, period, no appeal. At the least he could tell us to say, "no more packet forwarding", and we don't think that's fair.

If Bill continues to get has FAX paper used up with this crap, we will be forced to forbid Packet forwarding, and if it continues, we go BYE-BYE.

Bill will take legal action against unauthorized use of the Newsline Copyright, and he has in the past.

-Steve
-End of Comment-

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Netowrk. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline. and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in it's entirety, not be subject to any further editing or commentary, and that full credit given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in it's entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety.

NOTICE: Audio, Computer, and Packet retransmissions must be made without editing or unauthorized added commentary to the original message. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions just like any other news item from any other permissable/public source.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

(* *
(* The following advisory is not necessarily for trans- *
(* mission over amateur radio. This is just a reminder that *
(* the address for the Newsline Support Fund is Newsline, in *
(* care of Randy Hammock, KC6HUR, Post Office Box 463, *
(* Pasadena, California 91102. Again, and as always, we *
(* thank you. *
(* *
(* *
(* *
(* Message from: *
(* Bill Pasternak - WA6ITF *
(* Newsline Editor & Producer *
(* *
(* I am the producer and principal writer of Newsline. As *
(* such, I am about to clamp down on this garbage pertaining *
(* to the posting of our bulletins on packet. *
(* So that there is absolutely no room for individual *
(* interpretation, I really do not care if Newsline is posted *
(* to packet radio or if it is not posted. It was never *
(* intended for this purpose, and is only here as a service *

(* to those very few who do not receive it in its primary *
(* form: that being an AUDIO (read that as VOICE) news service *
(* issued every week by our organization and aired on over *
(* 6000 repeaters and bulletin stations worldwide. *
(* Again, let me make this as clear as I can. Newsline is *
(* an AUDIO service for people who want to listen with their *
(* ears -- not read from a CRT! As such, WE DO NOT POST *
(* ANYTHING ANYWHERE! *
(* Rather, we do permit one single individual, Dale Cary, *
(* WD0AKO, to represent us -- on his own -- and not associated *
(* directly with Newsline -- to post a version of the Newsline *
(* script to several COMMERCIAL BULLETIN BOARD SERVICES AND TO *
(* THE INTERNET. This includes GEnie, America OnLine, Delphi *
(* and several others. It does NOT include any packet radio *
(* BBS. *
(* So, when I arrived home from a vacation trip to find my *
(* FAX machine out of paper, and gobs of senseless gibberish *
(* about some stupidity of "packet radio police" wanting -- *
(* or not wanting to see our bulletins on packet, I am totally *
(* outraged! Even more so to find out that several of my *
(* consulting clients could not fax me because a bunch of self *
(* indulgent hams ran my machine out of paper for something *
(* this silly! *
(* So, here is the bottom line. I do not care if Newsline *
(* is, or is not posted to packet. Without packet it already *
(* reaches 100% of its intended audience. Whether it stays or *
(* leaves packet is your concern; I care not; and I do not *
(* want to hear another word about it! *
(* One of the messages on my fax machine indicated that *
(* the material is being edited or having material added to *
(* it. Specifically some "new-age" gobbledy-gook. This is *
(* FORBIDDEN! Whomever is doing it MUST STOP. Period! If *
(* you want to issue whatever your "new age" is, post it *
(* separately. Again, we have no interest in anything other *
(* than our own news and information. Anyone downloading it *
(* from one of the commercial services for posting to packet *
(* has to see the warning that the material is NOT TO BE *
(* ALTERED OR EDITED. That's the ground-rule. If you can't *
(* accept it, then do not post our material. Period! *
(* Finally, to those of you who have bothered me with this *
(* "packet police" nonsense -- all of you -- can I suggest *
(* that you "... get a life!" The FCC and the ARRL have a lot *
(* more important things to do than to play this stupid game *
(* of yours -- and so do I! *
(* If you are planning to respond -- DO NOT BOTHER. I do *
(* not have a TNC; I do not operate packet; I have no plans to *
(* ever do so; and I am using a telephone access to a local *
(* BBS to post this. *
(* So, you go fight it out between you if you want, but I *
(* also tell you to leave me, my fax machine, my telephone *

(* service and Newsline out of it! Simply put; I am just not *
(* at all interested in this exercise in futility. *
(* *
(* Bill Pasternak - WA6ITF *
(* *
(* *
(* *
(* That ends the closed circuit with Newsline report *
(* number 898 for release on Friday, October 28, 1994 to *
(* follow. *
(* *
(* *

The following is a QST

The plug is apparently pulled on a popular ham radio satellite, a German astro-ham has problems on the Mir space stations and two communications birthdays. Find out who is celebrating on Newsline report number 898 coming your way right now!

(*****
AO-21 QRT

One of amateur radio's most popular satellites has ceased operation. OSCAR-21 or AO-21, is off the air, and may be gone forever. AO-21 has been a favorite of ham satellite enthusiasts for several years. Whether AO-21 will ever return to the air remains in doubt.
Oscar-21 was launched in January, 1990. But it wasn't until the spring of 1992 when the satellite surged in popularity. That's when ground controllers reprogrammed the satellite, converting it to a crossband repeater. Suddenly, all you needed to work satellite was what most hams already have: a 2 meter and 440 MHz radio. The satellite received on UHF and transmitted back to earth on VHF. With its 600 mile polar orbit, AO-21 passed over the United States about six times daily, making it an ideal choice for many hams. AO-21 was launched as a secondary payload atop a Russian satellite named Informator-1. The spacecraft's primary mission is now over. The main command station has suspended operations. The command station shutdown may be why OSCAR-21 left the air, although there is no immediate confirmation. Also unclear is what happens next. Whether there will even be a future for one of amateur radio's most popular satellites remains in doubt.
AO-21's downlink frequencies could often be heard using a standard 2 meter radio. The satellite's primary downlink was 145.987 MHz and a CW telemetry beacon transmitted on 145.812 MHz. OSCAR enthusiasts plan to continue monitoring those frequencies just in case operations resume. OSCAR-21 is also known by the name RS-14.

(*****
FCC UPDATE

Three late breaking items from Washington.
First, the FCC has released a 7-page order amending the amateur rules in what the Commission calls as a nonsubstantive procedural rules change. The changes permit electronically filed data to be accepted from VEC's, authorize new hams the ability to go on the air as soon as the data appears in the FCC's amateur service licensee data base, adds a new rules section on ham radio Examinee Conduct during test session and codifies Technician Plus as a separate license class. The change also provides for a new short form license renewal document which the FCC says will be mailed to all hams in advance of their license expiration date. This, beginning sometime in 1995.
Because of the nature of these rule amendments, there is no notice or comment period required by federal law. These changes take effect on December 20th.
The FCC has also adopted a Notice of Proposed Rule Making to convert a block of spectrum from federal government to commercial use, including two UHF bands shared by Amateur Radio on a secondary basis with the government. The FCC is required by the Omnibus Budget Reconciliation Act of 1993 to adopt rules for such a reallocation by February 10, 1995.
Finally, the FCC has terminated its own proposal to provide interim licensing for visiting hams through the all volunteer testing system. It says it will concentrate on an international licensing scheme instead. More details on these stories next week.

(*****
DP3MIR UPDATE

German Astronaut Ulf Merbold, DP3MIR, is active from the Russian space station MIR over Europe during the evenings but not making a lot of contacts anywhere else in the world. This is because of a power supply problem aboard MIR that is preventing him from using the Digital Voice Memory to announce his operations schedule. The problem also reduces his activity to only a few passes a day. These appear to be reserved for European contacts.
Mission controllers have not released exact information about the on-board power problem. Complicating the information flow is that all questions about the amateur radio activities of DP3MIR have to be relayed via the Moscow control center.
Late word is that DP3MIR will stay aboard MIR until November 3rd. The QSL info is DP3MIR via the German DARC QSL Bureau.

(*****
ANIK FIXED!

Some news for space communications enthusiasts. First, word that Telesat Canada Space Systems engineers have regained total pointing control of the Company's Anik E-2 satellite and returned

it to full commercial operation.
Anik E-2 has been out of service since it suffered a major failure in its momentum wheel control system back on January 20th. Without its momentum wheel to provide stability, the satellite lost earth lock and its signals were misdirected into space. Telesat engineers and technicians were closeted for five months developing and testing the new recovery system known as the Ground Loop Attitude Control System. It allowed Telesat to maintain pointing accuracy over the Anik E-2 using computer controlled firings of thrusters and the operation of magnetic torquers located on the satellite.

(*****
FO-20 REPAIRED

The Fuji Oscar 20 ham satellite has been switched back into analog mode. JJ1WTK tells Newsline that the satellite came back to analog operation on September the 28th. Fuji's failure was traced to Mailbox software runaway and the malfunctioning of an Under Voltage Control protection system.

(*****
AO-16 BACK ON

The Oscar 16 File Server is again open and returned to general use. The AO-16 Command Team says that it switched the server back on in late September. The group satellite controllers say that they want to thank everyone for their patience during this important Preventive Maintenance operation.

(*****
ARRL ELECTIONS

A reminder that elections for seats on the ARRL Board of Directors are now under way. If you were a Full Member as of September 10, live in the Central, Northwestern, Roanoke, and Rocky Mountain. ARRL Divisions, and haven't received a ballot by November 1st, contact League Headquarters for a replacement.

(*****
LAMBDA FOLLOW-UP

More information has come to light on the recent settlement of a discrimination action brought by the Lambda Amateur Radio Club against the American Radio Relay League. It now looks as if the settlement we reported on last week went deep into the pockets of the League.
According to a press release from the Lambda Legal Defense Fund which is the legal organization that represented the radio club in its discrimination action, this settlement commits the League to adopt a non-discriminatory policy while also providing the Lambda Amateur Radio Club with attorney's fees, remedies for non-compliance, and free advertising.

Under the terms of the agreement the League must publish a non-discriminatory statement in each edition of QST magazine, it must run four one-eighth of a page block advertisements and print six classified advertisements for the Lambda Amateur Radio Club, doing all at no charge. In addition, the ARRL has agreed to pay $25,000 in attorney's fees, and commit to a policy of non-discrimination towards other lesbian and gay ham radio associations. The monetary figure mentioned does not include the ARRL's own legal expenses which probably ran another $25,000.

(*****
This Week In Amateur Radio

Justin Hughes, KA1ULT, is the newest voice columnist to join the satellite delivered ham radio news program This Week in Amateur Radio. Hughs is an English/Communications major at North Adams State College in Massachusetts. His writings include "Amateur Radio 101" which was published in the July 1994 issue of "QST". He was a featured guest speaker at the recent New England Ham Radio Convention and Flea Market at Boxboro, Massachusetts. "This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced Community Video Associates, Inc., a non-profit, charitable, tax-exempt foundation based in Albany, New York. The program is carried on the "Omega Radio Network" each Saturday at 7:30 PM (EDT) on the Galaxy III commercial communications satellite, transponder 17 and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz.

(*****
HAPPY BIRTHDAY FCC

The FCC celebrated its 60th birthday the first week of October. The FCC was created under the Communications Act of 1934. The agency said it began with 233 employees and a $1.14 million budget. Today it has grown to 1964 employees and a budget of more than $160 million annually.

(*****
QUEEN MARY CELEBRATES 60TH

On September 26, marked the 60th anniversary of a major ham radio attraction. That of the christening and launch of the Queen Mary, the world's largest ocean liner.
On a rainy Wednesday, Sept. 26, 1934, a reported 250,000 people gathered in the presence of Their Majesties King George V and Queen Mary at the yard of John Brown & Co. Ltd. on the banks of the Clyde River in Clydebank District, Scotland, for the launch of the world's largest ocean liner. Her Majesty Queen Mary performed the naming ceremony, and the Royal Mail Ship Queen Mary became the first merchant vessel to bear the name of a reigning

queen.
Today, the ship is a tourist attraction anchored in Long Beach, California. Its also the home of Amateur Radio station W6RO.

(*****
HUGO

"Getting Started in VHF," a video introduction to operating on the Amateur Radio VHF frequency bands and produced by CQ Communications, has won a Silver Hugo Award from "INTERCOM '94," the International Communication Film and Video Festival. The video was honored in the competition's "Educational Adult Audience" category.
The program was written, produced and directed by Rich Moseson, NW2L, executive producer of the CQ Video Library, the ARRL Northern New Jersey Section Manager and a frequent contributor to Newsline.
"Getting Started in VHF" is the second CQ video to win an award. Earlier this year, "Ham Radio Horizons," an introduction to Amateur Radio, received a bronze CINDY award from the Association of Visual Communicators, and it was a finalist in the International Television Association's New Jersey Awards competition.

(*****
DX

In DX, word that the ARRL Awards Committee has voted 5 to 2 against a DX Advisory Committee recommendation that would set a minimum size for new DXCC countries. Those voting against shared the feeling that a minimum size rule was not needed.
But that's not the end of the story. It seems that the Standard Operating Procedure for the committees allows the DXAC to resubmit a recommendation, with or without changes, on appeal. The Chairman has announced his intention to do that. As a result, individuals may also send comments on the issue to ARRL HQ. Comments addressed to the DXAC will be read by members of both committees.
In the meantime, the DXAC Chairman has declared a moratorium on new DXCC country petitions that may be affected by a minimum size rule. This moratorium will continue until such time as the deliberations on this issue are complete.

(*****
DX - C-53

Also, word that C53HG, has been quite active from Gambia on 7 and 20 meters CW and SSB. His activity varies on 17 meters, as early as 13:30 and as late as 21:30 UTC. On 20 meters, look for him on either mode between 18:30 and 22:30 UTC. His QTH is in Banjul and he has a stateside QSL Manager of W3HCW.

(*****
W2SKE S.K.

We are sad to report that William A. Leonard, W2SKE, the former
president of CBS News and a lifelong advocate for ham radio has
died. Bill Leonard as he was known to his many friends worldwide
was age 78 when he passed away on October 23rd in Laurel, Maryland
of an aperient stroke.
Bill Leonard received his first amateur license and the call
sign W1JHV, while a student at Dartmouth College in 1934. After
graduating in 1937, he went to work as a reporter for the
Bridgeport, Connecticut, Post-Telegram. He served in the Navy
from 1941 to 1945, where was involved with electronic
countermeasures against German radio-controlled bombs. He joined
CBS News in 1945.
As CBS president, Leonard was credited with the selection of
Dan Rather as Evening News anchor replacing the then retiring
Walter Cronkite KB2GSD. Leonard was also a member of the team
that inspired the news magazine 60 Minutes, and of helping develop
techniques to project the outcome of elections by the news media.
Leonard was also a strong champion for Amateur Radio. In an
article for Sports Illustrated in 1958 titled "The Battle of the
Hams" he described the sport of DXing and his own personal role in
it. An avid Dxer and contest operator in the 1960s and 1970s,
W2SKE was regularly found manning the 10 meter station at the
famed K2GL multi operator station on Long Island New York.
A profile of W2SKE appeared in March, 1981, issue QST
magazine. Bill Leonard leaves his wife, the former Norma Kaphan
Wallace, and six sons.

Yup! It's called a "telephone." ;-)

Seriously, though, you have two possibilities: VHF/UHF packet, which, if
you're lucky, may get your messages through, or satellites.

CQ Netters...

While SWListenning, I found myself on 6.730 Mhz USB, and I heard
an American accented man identify himself as "Two Nine Thousand",
there was noise on his background as if he was in an aircraft, and
his mike had a blip roger similar to those used by aviation radios !
Another American accented man replied "we have a clear contact,
there is QRM on 127, stay here untill we are on the go"
For the next couple of minutes the first voice tested his mike
"This is Two Nine Thousand 1,2,3,3,2,1" and the other would reply "clear"
The two stations made a QSY to 6.731 Mhz USB, and continued to test
their contact, at some point I lost them both, I searched around a
bit and found them again on 6.738 Mhz USB, when I heard the following,
"Andrews this is 2.9000", lot's of QRM followed, "Skyking this
is a confirmation, do not reply", more QRM, "Conditions are Blue",
even more QRM, "Andrews on 6.738", and from then on lot's of QRM
with sporadic messages using the phonetic alphabet and numbers.
The signal of "Two Nine Thousand" was 9+20/5 and of "Andrews" 7/5
Does anyone know what the above was ?? A friend told me it could
have been the Space Shuttle, it made sence for a bit due to the
name "Andrews" that was used, also the blip roger did remind me
of the one I have heard from famous to all of us Apollo moon landing
film footage, and the fact that they should be in space at about
now, but then again what would the space shuttle be doing in HF ??

Does anyone know was it that I heard ???????

Please reply via e-mail

>Newsgroups: rec.radio.amateur.misc
>Subject: ### About 2nd hand rigs, user manuals & copyright laws...

S>Most of the time, when you purchase a 2nd had rig, it would probably come
>with the user manual.

I don't think this is a necessarily correct assumption.

S>What if it doesn't, do you have the 'right' as the
>owner of the equiptment to make a photocopy (xerox?) of it, and use the
>copy? Or will copyright laws kick you for that?

Do you really need to keep the Manual?

S>Or do I have to do something, like, write to the manufacturer, and purchase
>a new manual for him, or if he doesn't have anymore in print (perhaps a very
>old rig) to obtain 'written permission' to make a copy of it?

You are over-thinking this. Sell the unit AS-IS if you want to keep the
Manual. Have the Purchaser either borrow yours, or obtain their own.

>probably not in any Western European country either.

Of cause it is relly illegal, but from what I heard it is done, eg.
by delta gliders.

Looks like if you have a license for the services where you transmit,
and only handle traffic as appropriate, noone is going to jump on
you for not carrying seperate radios. (Other milage...)
There are handies around, that do this right away w/o mods.

Hi,

Can anyone tell me the minimum requirement to work the MIR.
I am using a 7/8 lambda Diamond F-22 vertical mounted on roof. Also
using IC-22A on 145.550 MHz with 10watts output. Is this sufficient
to work the MIR? The last pass we tried was about 440km nearest.

Tried for abt 50 minutes about the 3 minute window. No QRM
or obstructions but QSO either. Would appreciate any help. Would a
YAGI be necessary?

>validate this story.

Hi Bill, I can tell it like it was in the early 50's when I was a Novice (WN5DXP). The shave-and-a-haircut...six-bits thing was not used in place of a CQ. It was used only at the very end of a CW QSO after both stations had signed their 73's. It went like this:

Station#1: ... 73 73 shave-and-a-haircut

Station#2: six-bits shave-and-a-haircut

Station#1: six-bits

Over the years the shave-and-a-haircut part has been dropped and only the six-bits part remains. But in the early 50's, the majority of Novices signed as Stations 1 & 2 above. I've never heard shave-and-a-haircut used in place of CQ but I was inactive on CW from the mid-50's to the mid-80's.

I didn't mean anyone in particular, I just ment those in the No-code tech class who, in my opinion are a minority for the folks, who are whining and complaining and are constantly asking the government to give them a code exemption. Most of the no code folks out there who want to upgrade are willing to make the effort.

The largest class of ticket holders in Ham radio are technicians, and I would sure like to see everyone who wants an upgrade to get one, but when someone comes into a testing session and has been studying CW for 2 weeks, and wants to pass the 13wpm, I get kinda riled up.

1582. new CW program: "tomorse"

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-30 19:05:38 UTC
From: Benjamin Cox <thoth+@CMU.EDU>
Message-ID: <0igyu2200ioV0U9JE0@andrew.cmu.edu>
Source record: 257632

I've written a small program to generate Morse sound files (Sun
.au/NeXT .snd) from ASCII input. It runs on unix (written and tested
on HP 715/50 running HP-UX A.09.03, but should be very portable).

It's available for FTP from oak.oakland.edu in directory
/pub/hamradio/unix/morse, filename tomorse.tar.gz (GNUzipped tar
file).

Following is a copy of the README file.

Enjoy!

--
Ben Cox N9RQV/3 thoth+@cmu.edu

This is "tomorse", a program to convert ASCII input to morse code output.
Output can either be in ASCII dot-dash (.-) form, or in audio/basic form
(Sun .au/NeXT .snd, 8000 Hz sample rate, 8-bit u-law encoding).

Copyright (C) 1994 Ben Cox N9RQV/3 <thoth+@cmu.edu>.

This program is free software; you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License
along with this program; if not, write to the Free Software
Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Usage: tomorse [-s<speed>] [-c<cspeed>] [-p<pitch>] [-ascii]
If <cspeed> exceeds <speed>, Farnsworth spacing is used.
Speeds are given in words per minute (1-60).
Pitch is CW tone, in Hz.
-ascii turns off sound output.

<speed> is the overall output speed in words per minute (default 13).
<cspeed> is the character speed in words per minute (default 20).
If <cspeed> is faster than <speed>, the output will use
Farnsworth spacing. That is, the intercharacter and
interword spaces will be larger so that the overall

speed is <speed> despite the faster character speed.
<pitch> is the pitch of the CW tone, in Hz. Default is 880 Hz.

If these options are repeated, the later option prevails (i.e., giving
"-s13 -s20" results in a speed of 20wpm). The program will not generate
Morse faster than 60wpm.

If the "-ascii" switch is given, output is in ASCII dot-dash form.
In this mode, the pitch and speed options are ignored.

The letters A through Z, numerals and punctuation (.,?:;-/") marks
are recognized. Prosigns AR, AS, KN and SK are available:
* AR (over, end of message): use "+" character
* AS (wait, stand by): use "|" character
* KN (go ahead, addressed station only): use ">" character
* SK (end of contact): use "~" character

Reference for Morse code was "The ARRL Operating Manual", Fourth Edition,
1991, ISBN 0-87259-032-1. If you don't have this book, you should get it.

Input is taken from stdin, and output appears on stdout.
If your machine supports it (mine doesn't), you can redirect this
program's output directly to your audio device. Otherwise,
save the output in a file and play it later.

Example usage:

echo -n "73 de n9rqv/3" | tomorse > n9rqv-3.au
send_sound n9rqv-3.au

echo -n "can you copy this fast?" | tomorse -s40 > fast.au
send_sound fast.au

I wrote this program to help myself study for the 1B 13wpm and 1C 20wpm
exams. I hope you can use it too. If you have suggestions, send them
to me at <thoth+@cmu.edu>; if I make another version, I may include your
suggestion.

73,

Ben Cox N9RQV/3

SB SAT @ AMSAT $ANS-302.01
PHASE 3-D TOP TO BOTTOM REVIEW

HR AMSAT NEWS SERVICE BULLETIN 302.01 FROM AMSAT HQ
SILVER SPRING,MD OCTOBER 29,1994
TO ALL RADIO AMATEURS BT
BID: $ANS-302.01

PHASE 3-D INTERNATIONAL SATELLITE TEAM MEETS IN GERMANY TO REVIEWS ONGOING PROGRESS

Members of the Phase 3-D International Satellite Design Team met in Marburg, Germany October 12th to 23rd, 1994. Dr. Karl Meinzer, DJ4ZC, AMSAT-DL President, the Phase 3-D Project Team Leader, and Werner Haas, DJ5KQ, AMSAT-DL Vice-President hosted the series of detailed meetings which included a "top-to-bottom" review of progress on all the satellite's systems and sub-systems. During the discussions, team members also bench-tested a number of flight hardware electronic items, and set the final operating frequencies for the spacecraft's transmitters and receivers.

"It was a marathon session," said Dick Jansson, WD4FAB, AMSAT North America's Vice President for Engineering, upon his return to the United States on October 24th from the Marburg meetings. Dick went on to note that, as a result of the session, team members are now very confident that all key elements of the project are on schedule and that the spacecraft's integration in Florida can continue without interruption.

Several critical schedule milestones were achieved during the meetings. Among them were completion of all the formal documentation accompanying AMSAT's "Application to Use Ariane" (DUA) along with the necessary Safety Submission. Together, these documents constitute the formal, written request to The European Space Agency (ESA) regarding how AMSAT proposes to safely mount Phase 3-D on the Ariane 5. It took several members a number of days to complete this highly complex task. In addition, an ESA representative visited with the team in Marburg during the session to discuss details of Phase 3-D's interface to the Ariane 5.

Another series of meetings involved Dr. Andras ("Bandi") Gschwindt, HA5WH, and two of his colleagues, all from the University of Budapest. These meetings finalized the P3-D power system's architecture and the design of the Battery Charge Regulator (BCR). Bandi has been involved with the BCRs on all previous Phase 3 spacecraft.

Also present at the session was Freddy de Guchteneire, ON6UG, Phase 3-D's Frequency Coordinator. Under Freddy's expert guidance, the team finalized

all of Phase 3-D's frequency passbands. This all-important step cast the frequencies in "quartz" for the spacecraft's RF units. Freddy will make a separate public announcement in the near future listing Phase 3-D's final frequency passbands in more detail. In addition, Freddy, Dr. Karl Meinzer and Werner Haas, DJ5KQ, spent a considerable amount of time bench-testing the nearly completed flight models of the V and U band receivers.

Karl also met with Michael Scharfe, DH7UX, and Ralf Zimmermann, DL7FDT, both of the University of Darmstadt, regarding the details of the spacecraft's reaction wheel stabilization system. During these meetings, the overall design approach for the reaction wheel system was finalized and Michael and Ralf are now in the process of turning Karl's fundamental mechanical, magnetic and mathematical design concepts into actual flight hardware for the spacecraft. Another key element of this critical process involved a series of meetings among Karl, Dick Jansson and Wilfred Gladish. During these meetings, the team modified and finalized both the location and design for the reaction wheel mounting hardware.

On October 19th, Peter Guelzow, DB2OS, joined the session and directed several key discussions regarding the status and availability of the remaining spacecraft modules. After extensive discussions with the RUDAK group in Munich, the team concluded that the RUDAK-E experiment would not be available and therefore will not fly. However, good construction progress on the RUDAK-U, the user-oriented digital communications system, as well as its special relationship to other onboard high-speed data experiments, such as the SCOPE cameras and GPS experiment, were noted. Peter and Werner also held some very detailed side meetings that finalized the specific architecture for the RUDAK-U.

Matjaz Vidmar, YT3MV arrived on Friday 21st October to discuss various design aspects of the receivers he is building for P3-D. Other discussions noted favorable progress now being made on Phase 3-D's IF matrix as well as the LEILA system. In a related development, Peter agreed to oversee construction of all of Phase 3-D's CheckOut Test Equipment (COTE). This equipment will be a critical hardware and software suite providing remote command and control of the spacecraft during integration, checkout and launch.

Finally, the team conducted a detailed "top-to-bottom" schedule review of the project. All agreed that the schedule timing is "tight". However, in closing, Dr. Meinzer expressed his satisfaction with the progress to date, and expressed confidence that the time allotted for all remaining critical activities in the project schedule appear both realistic and achievable.

ANS thanks to Dick Jansson, WD4FAB, and Peter Guelzow, DB2OS, who contributed the information that went into this News Release}

ITAMSAT BACK ON

HR AMSAT NEWS SERVICE BULLETIN 302.02 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 29, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-302.02

Due to heavy workload and the desire to turn to different interests, Alberto I2KBD, has appointed Gianluigi IK2VOO as main command station and Stefano IK2OYD as backup. After some training, on 20 October IK2VOO succesfully turned on ITAMSAT and exercised some onboard functions. Both trasmitters (435.867 MHz and 435.822 MHz) were commanded on and some telemetry was collected. The spacecraft was in good shape, the battery well charged and the main parameters in nominal status. After a week of tests, with the main purpose of better training the new command stations in the commanding procedures, IO-26 was reset in preparation to the main software reload.

ANS thanks Alberto Zagni I2KBD and the ITAMSAT Command team for this information.

SB SAT @ AMSAT $ANS302.03
WO-18 PROBLEM

HR AMSAT NEWS SERVICE BULLETIN 302.03 FROM AMSAT HQ
SILVER SPRING. MD OCTOBER 29, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS302.03

WEBERSAT WO-18 PROBLEM NOTED

A problem seems to have developed on WO-18. It has become difficult to copy packets from the satellite. We don't have a handle on the cause yet said Chris Williams WA3PSD.We are in the process of getting some test equipment into the ground station to get a look at the signal.
To the ear, it sounds essentially as it always has. It is not currently impossible to copy, but data quantities received during a pass are reduced about 30% -- and that's only if one "tweaks" the IF shift on one's receiver. With no special tuning efforts, results seem worse. Frankly he added,it is not clear special tuning procedures are helping. It appears to be an intermittent problem. Telemetry does not indicate anything wrong.

Chris added that there is some control of the RC transmitter's phasing available and they will explore it as a solution. We also may switch back to the straight BPSK transmitter on occasion to determine if that is a superior alternative,he concluded.

Chris asks that anyone who has information or suggestions relative to WO-18 to please drop him a note via Internet at cwilliams@cc.weber.edu.

SB SAT @ AMSAT $ANS-302.04
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 302.04 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 29, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-302.04

Weekly OSCAR Status Reports: 29-OCT-94

AO-13: Current Transponder Operating Schedule:
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Blon/Blat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimize the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.
==========
[G3RUH/DB2OS/VK5AGR]

Despite reports of power system problems, leading to orientation difficulties, attributed to Space News, it has been reported that MIR: German Astronaut Ulf Merbold, DP3MIR, has been active from the Russian space station MIR over Europe during the recent evenings. Unfortunately the power supply problem aboard MIR, has apparently prevented Ulf from using the Digital Voice Memory and obviously reducing his activity to only a few passes a day over Europe. DP3MIR is scheduled to stay aboard MIR until about 3-NOV-94. It is hoped that he will be active over other continents besides Europe. The QSL info is: DP3MIR via the usual German (DARC) QSL Bureau. [DF5DP]

WO-18 Operating but apparently suffering some kind of problem. See accompnying bulletin.

FO-20: JJ1WTK reports that on 19-OCT-94 that all software needed to start the BBS was completed and the BBS is now in full operation. JJ1WTK notes also that is has been 4 years since FO-20 was placed into orbit. The batteries on FO-20 are performing far better than those aboard FO-12 at this same point in FO-20's life. However, the FO-20 batteries have degraded slightly and this has caused a change in the battery voltage power control unit telemetry item (abbreviated by PCU) to change to level 3. [Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

AO-21: The "total-shutdown" of the amateur radio payload AO-21 (including the CW-beacon on 145.818MHz) on the main spacecraft INFORMATOR 1 occured during the following time period: 94-10-12 15:00 UTC & 94-10-13 11:42 UTC. If anyone was watching the shutdown when it happened or can narrow this time interval to the very instant it happened, this will be very helpful data to understanding what is going on with INFORMATOR 1. The AO-21

Command Team is looking forward to hearing from you. Please send your comments via PACKET to Robert: DD4YR @DB0AAB.#BAY.DEU.EU or via INTERNET to Peter at db2os@amsat.org. [DB2OS/DG2CV/DD4YR]

AO-27: When AO-27 is over North America, it has its amateur radio payload activated in digital mode almost 100% of the time. [N4USI]

YOUR ATTENTION PLEASE
DDDDDDDDDDDDDDDDDDDDDDDDD
During the month of NOVEMBER you have a NEW AMSAT NEWS SERVICE editor, W3QNS. PLEASE send all information to w3qns@amsat.org on the internet or to 76446,1615 on COMPUSERVE. I will be grateful for all help!
I also wish to thank BILL T. W3XO for all the help in getting this together.

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to W3QNS at my CompuServe address or to w3qns@amsat.org Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

>helpful.

So Mitreks are made-to-order for 420 MHz? I didn't realize Motorola made their redios available on the ham frequencies. I assumed he was looking for an already converted 450-470 model but if the price was right he'd do the converting himself.

I believe this is covered under 97.101(a) and (d) in that good amateur
practice (mandated in (a)) involves listening before transmitting to
avoid (d).

Actually, I was thinking of *both* of the above quoted sections.
Both were lobbied for by ARRL to support W1AW operations, though
of course they had to be worded so that all amateur stations meeting
the requirements are elegible.

>What does the bill passing "CONGRESS ACTS TO SUPPORT HAM RADIO"
>regarding "reasonable accomidations" mean to the average HAM?

It's a sense of Congress resolution. It doesn't mean much at all
since it doesn't require specific action by Federal or local
jurisdictions. There are no enforcement provisions, nor is any
money allocated. It's mainly symbolic. As a symbol, it says amateur
radio is a good thing (we knew that), and says reasonable accomodations
for amateur operation should be made. It doesn't, however, require
any *specific* actions by any governmental body. (IE it doesn't
overturn headset laws, zoning laws, restrictive covenants, or local
RF exposure limits)

It's a "feel good" measure that can be used as a moral bludgeon in
dealing with government restrictions on amateur operations. That's
a good thing. It may be helpful in arguing some court cases, and
it may be useful in stopping some excessive local legislation.
It is *not* a blanket authority to operate amateur radio contrary
to local laws or restrictions.

When I post something (be it a mod file, or an image file, or short
program, or recipe, etc) to @WW or @USA or whatever, I anticipate that
someone out there would be interested in reading it. I do get replies
thanking me for image files (a teacher in France told me he's going to
use the "comet hitting Jupiter" images I posted in his class, which
might get some of his kids interested in ham radio maybe, another
set of replies when I posted an image of myself, all positive, no flames).

As Gary K____ (sorry, forgot your call) (the guy at a destructive test lab)
pointed out, the FCC considers all the packet posts as 3rd party traffic.
As long as you don't do something of "percunary(sp) interest" or use
dirty words, it's okay. Somewhat similar to hams on HF or 2meters
talking about the weather or health problems, in that the content is
not directly related to radios.

-> So Mitreks are made-to-order for 420 MHz? I didn't realize Motorola

They are 400-420 Mhz and they move up into the 420 Ham Band quite
nicely. Motorola has made nearly every line in a 400-420 version
because of the Federal Bureaus that operate in that spectrum...

i would think that there would be a problem with the ability of a telescoping antenna to withstand wind and any objects you might hit. no problem with having a external whip as you describe, but you might want to make it a piece of flexible rod so you don't have to worry about unexpected failure and save the telescoping whip for other applications...

The antenna is the exact opposite of what you want. The F-22 (and all gain
verticals) get their gain by concentrating the signal toward the horizon.
The problem is that MIR is UP, not at the horizon! Don't feel alone, when
I worked at HRO, this would happen with someone once a day at least.

Try an antenna called a "Crossed Dipole". I used one for years for MIR
and Sarex. It points up toward the satellites. For a good description, look
in the Satellite Experimenters Handbook for it.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 OCTOBER AND FORECAST FOR 31 OCTOBER - 02 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 98/45

GOES satellite data for 29 Oct
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 1.8E+07 (normal)
X-ray background: B1.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
31 Oct 01 Nov 02 Nov
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 31 Oct: 96/43

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 29 Oct
Learmonth 26 4444 5343
Fredericksburg 32 34
Planetary 40 49

Observed Kp for 29 Oct: 3356 7633
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
31 Oct 30 Active
01 Nov 30 Active
02 Nov 30 Active
COMMENT: IPS Geomagnetic Warning 8 was issued on 27 October and is
current for interval 27 October to 4 November.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
30 Oct normal fair poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Oct normal fair poor-fair
01 Nov normal fair poor-fair
02 Nov normal fair poor-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
30 Oct -13 15 to 20% below predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
31 Oct -15 15 to 20% below predicted monthly values
01 Nov -10 15 to 20% below predicted monthly values
02 Nov -10 15 to 20% below predicted monthly values
COMMENT: IPS HF Communications Warning 9 was issued on 27 October and
is current for interval 27 October to 4 November. Depressed
conditions are persisting at Sydney. Frequencies were near predicted
values yesterday at Townsville.

Something that I'm not sure if I got listed in my first response, is that there are HF aeronautical comms at most major (if not all) international airports. If the pilot is worried about wx updates, he should probably use those freqs.

This could benefit them two-fold:
1) The aircraft only needs the appropriate equiment installed, and permits, for the aviation bands.

2) The pilot doesn't need to worry about relying in a volunteer force.

Unless otherwise stated, expressed view are my own. They may not be the opinions of my superiors, the U.S. Navy, the DoD, nor the U.S. government.

Hi, I'm trying to key an ATV transceiver to send data that is coming out of an ethernet card. There is an interface in between but there are several problems still, like fitting 10 Mbps (20 Mbaud because of the Manchester line code) into 4.5 MHz of the ATV.

Any information would be appreciated.

Well...it guess is possible to learn 13wpm in 2 weeks. I learned 5wpm in 5 days....and got 10/10 on my code test not to mention perfect copy. Not saying that it couldn't be done..but the fact is that many don't even use the code once they've passed the test. I almost see the code as somewhat of a screener for the "losers" in the radio hobby. Im also not saying that its worthless. I have used the code nearly every day since I recieved my license and ill say thats its been worth every minute of it. The no-codes should be very happy with what they have..and screaming for more will just inflame many of the dedicated HF opeartors who don't want to see their band go to hell.

acutally, moto, last i checked, would make what ever you were willing to pay for. the radios are pretty universal (something for everyone), but just that the standard product line doesn't have the "ham" convienences like user settable frequencies and all that.

there's one guy over in satellite beach that is alledged to go dumpster diving at hamfests and the like to acquire broken moto equipment and then attempts to build 1 working radio out of the discarded parts...he's gotten a couple small things working...but he pays to get the programming set up on them.

I am very pleased to announce my new Kentrol Web Page(s). So far as I can determine, Kentrol is the only radio hobby shareware with its own WWW presence at this time.

Kentrol is a Windows-based rig control/logging/memory management program for Kenwood HF radios that has been distributed online since 1991, initially through CompuServe and more recently via Internet ftp archives. The current version is 4.3. Now, through its new Web Page, amateurs and swls can check out the interface, read the documentation, and download the software.

The URL for all this good stuff is: http://www.synapse.net/Kentrol/Kentrol.html

Please take a look when you have a moment. If you're a Kenwood owner and haven't tried Kentrol, you owe it to yourself.

Thanks and 73,
Brian VE3BGB

Sheesh, what a waste of humanity and bandwidth.
You are all a bunch of JERKS.

Liberals are dumb enough to think they can successfully
legislate anybody's inner thoughts. Or, possibly, that
subtle arguments will assuage the soul of a common man.

Conservatives are dumb enough to think they have some
right to abuse inferior people of any strange ilk.

Fortunately, (for the time being,) enough common ole
Joe Blow's see both of these positions as pretty stupid.

Now, Billy, in your own thoughts, you "don't HAVE to tolerate
anything." I personnally don't care if you spend your
waking hours in obsessed thoughts of cutting the nuts off
of any man who has the "gay look." Hey, whatever turns
your "crank."

However, if you are dumb enough to think that you "don't
HAVE to tolerate" the legal activities in public environments

of another citizen simply because his lifestyle rubs you the wrong way, I will be among the first in line to laugh as you rot in jail for any attempt to deprive him of his lawful pursuits.

This isn't very complicated. Either we believe in a truly responsible and free society that sets the standards for the rest of world to admire OR we are simply espousing our own brand of petty fascist state.

Sorry for this interuption... Bye... Ted..

1622. Icom 730 pre-amp prob

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-31 05:48:22 UTC
From: paulr@pwd.nsw.gov.au
Message-ID: <3920f6$ck4@vulpes.pwd.nsw.gov.au>
Source record: 257673

My old (10yrs plus) IC730-S has a problem with the pre-amp. If I switch it in, it acts as a 99dB attenuator. As the act of switching it in has an effect, I assume the switch is OK (but then again, maybe only half of it is).

The other conclusion is an IC or transistor in the preamp. Anyone had this experience, and any suggestions.

> MacContest in my internet wanderings. Unfortunately, the program crashes on

I've been writing a Mac logging program for personal use, hadn't realized there may be a total lack of them. If they really are that scarce, I'd consider cleaning mine up and releasing it to the Net ($5 shareware or something).

What would everyone want to see as far as features? At the moment I plan to add sort/report features (always thought it would be nice to be able to print all QSO's with VE's between a certain date...).

This is a very serious request. Let me know what's on your wish list. The Holidays are fast approaching, after all. I write code for a living, so you could expect more than a quick hack job. More like a long hack job. :)

My brother and I kept in touch during our elk hunt in the Colorado Rockies via 2Meter HTs. Taking terrain into consideration, there were very few times we could not connect.

When my brother shot his 6 point bull elk, he summoned my help for the fun part. When I found him, I took my radio apart and stuffed it in a pocket - one with a hole in it. I subsequently lost my rubber duck. Back at base camp I had the trusty TV twin lead jpole. For the remainder of the hunt, I used the jpole, slung over my shoulder and dangling down inside my coat with equal success to the rubber duck. I was also able to make several simplex contacts with another friend hunting over 10 miles away. All three of us use Yaesu FT530s.
- What fun !

I have a Tandy 1000 that was given to me. The intent is to put this on packet radio (amateur radio), but I can't seem to get the serial port to work. I pulled off the case (by the way, the board by the DB25 connector says RS-232) to take a look at the card, and it is a mother/daugher configuration. I have yet to find my breakout box, but I couln't talk to my modem using the port.

Does anyone know if this is a standard ISA bus in a Tandy1000 ? If I was to put a normal serial card in, would it work ok?

Please email to hcooper@es.com

Thanks much

The ARRL Letter
Vol. 13, No. 20
October 26, 1994
Faster licensing:
FCC sets date for electronic filing
On October 24 the FCC released a 7-page Order amending its amateur rules, effective December 20, 1994, to reflect what the Commission calls "nonsubstantive procedural changes":
* To permit electronically filed data from VECs (paper applications also will still be accepted);
* To authorize operation as soon as the new license data appears in the amateur service licensee data base, rather than (as now) when the license document has been delivered (details of how the new licensee can determine his call sign will be announced later);
* To add a new rules section, "Examinee Conduct," to emphasize that an examinee must comply with the instructions given by the administering VEs;
* To treat "Technician Plus" as a license class;
* And to provide for a "renewal short form," which the FCC says will be mailed to licensees in advance of their expiration date beginning sometime in 1995. The FCC added that renewal applications would be accepted no more than 90 days before the expiration date.
Because of the nature of these rule amendments, there is no notice or comment period required by federal law. Again, these changes do not take effect until December 20, 1994.
FCC seeks changes in two UHF bands
The FCC on October 20 adopted a Notice of Proposed Rule Making to convert a block of spectrum from federal government to commercial use, including two UHF bands shared by Amateur Radio on a secondary basis with the government.
The proposal, in ET Docket 94-32, would allocate 2390 to 2400, 2402 to 2417 (both shared by amateurs), and 4660 to 4685 MHz to the Fixed and Mobile Services. The FCC is required by the Omnibus Budget Reconciliation Act of 1993 to adopt rules for such a reallocation by February 10, 1995.
The proposal calls for licensing to be accomplished through competitive bidding. In a news release, the Commission said it is requesting comment on alternative approaches, including "continued use of some of this spectrum by the amateur community."
The FCC said it received a number of responses to its Notice of Inquiry on the proposed reallocations, including formal comments from "the amateur community" (primarily the ARRL). More information was in October QST, p 83.
In another proceeding, ET Docket 94-124, the FCC is proposing to open a number of bands above 40 GHz to commercial use. The only one that potentially affects amateurs is 76.0 to 77.0 GHz, which is adjacent to our

primary allocation at 75.5 to 76.0 GHz and is part of the 76.0 to 81.0 GHz band that amateurs share on a secondary basis.

FLOODS BRING OUT
TEXAS VOLUNTEERS

The FCC on October 19 declared a "Voluntary Communications Emergency" as Texas amateurs provided service during flooding in the southeastern portion of the state and particularly in the Houston area. That morning, North Texas Section Emergency Coordinator Joe Brown, K5UPN, reported that several statewide and emergency nets were in around-the-clock operation. Some of these nets, like the Texas RACES Net and the Central Gulf Coast Hurricane Net, were handling emergency and priority traffic only. The other nets were handling information requests and health and welfare traffic.

As a result of the net activity, the FCC's Houston office issued a statement saying "All Amateurs are requested to cooperate by recognizing the existence of a voluntary communications emergency and therefore relinquishing the use of frequencies between 3967 and 3973 and between 3972 and 3978 kHz and between 7245 and 7251 kHz for the handling of emergency traffic."

On Thursday, October 20, ARRL South Texas Section Manager Alan Cross, WA5UZB, reported by telephone that ARES teams were heavily involved in emergency communications. At the time, he didn't notice any ARES personnel shortages. Radio amateurs were active at Houston-area Red Cross shelters, assisting fire departments and sheriff departments, according to plans already in place. Many radio amateurs were also staffing emergency operation centers.

Cross also mentioned the burning gas pipelines at the San Jacinto River. He was concerned that in due time, the ARES operators would need reinforcements. The North Texas Section had already contributed ARES personnel to help.

By late Thursday, emergency nets were back to their normal operating schedules. Joe, K5UPN, reported a large number of health and welfare messages and related traffic being handled. On Friday, Brown reported the same kind of activity on the local and section nets. -- Steve Ewald, WV1X.

NEWSMAN BILL LEONARD,
W2SKE, IS DEAD AT AGE 78

Bill Leonard, W2SKE, a former president of CBS News, died October 23 in Laurel, Maryland. He was 78.

Leonard, an avid DXer and contest operator in the 1960s and 1970s, was an advocate for Amateur Radio, writing, for example, an article for Sports Illustrated in 1958 entitled "The Battle of the Hams." It described the "sport of DXing" and Leonard's role in it from the contest super station of Buzz Reeves, K2GL, in New Jersey.

Leonard said in 1981 that he was interested in radio as a child in the 1920s, and received his first amateur license, W1JHV, while a student at Dartmouth College in 1934.

After graduating in 1937, Leonard went to work as a reporter for the Bridgeport, Connecticut, Post-Telegram. After serving in the US Navy from 1941 to 1945, where he was involved with electronic countermeasures against German radio-controlled bombs, he joined CBS News in 1945.

As CBS president, Leonard was credited with the selection of Dan Rather

as CBS Evening News anchor, as a member of the team that developed the "60 Minutes" newsmagazine, and of helping develop techniques to predict election outcomes.

Asked in 1981 about the future of Amateur Radio, W2SKE said "I have a hunch that Amateur Radio is going to get more and more tangled up with amateur computer technology." He also said "My bet is that ham radio, in one form or another, will be around 100 years from now."

A profile of W2SKE appeared in March, 1981, QST. Bill Leonard leaves his wife, the former Norma Kaphan Wallace, and six sons.

FCC ESTABLISHES NEW
INTERNATIONAL BUREAU

The FCC has created an International Bureau to handle international telecommunication and satellite programs and policies and to represent the Commission at international conferences and negotiations. The bureau will have three divisions: Telecommunications; Satellite and Radiocommunication; and Planning and Negotiations.

This new bureau is a major part of the FCC's overall reorganization announced last summer.

COMICS FUNDING SOUGHT

All kids like comics. Every year ARRL HQ provides some 50,000 copies of an Archie ham radio comic to amateurs, who then give them to interested youngsters as part of the League's effort to tell them about Amateur Radio. Print runs of 100,000 (the minimum) cost about $19,000. The comics come with a reply card for more information and a list of companies and clubs that have contributed to the comics program.

So please help, by asking your club to consider giving $50, $100, $250 or what your members can afford -- or ask your club newsletter editor to run this article in the next issue. Contact the ARRL Educational Activities Department for details. And thanks.

BRIEFS

* W1AW has reoriented its beams for 10, 15, and 20 meters to provide better coverage of the southeastern states. The 120-foot tower now has upper antennas on those bands pointed west and lower beams, fed in phase, pointed south. The work was done by
station manager WA1MBK and operator WB9RRU.

* Last summer, London's Science Museum announced that its Amateur Radio exhibit station, GB2SM, would be closed down because its time had passed. The Radio Society of Great Britain went to work, and now says that the museum has agreed to discuss "providing an innovative, state-of-the-art, hands-on exhibit to replace the existing station." In the interim (GB2SM will close November 7) the RSGB hopes to find a way to at least keep the famous call sign on the air.

* The latest HQ staff member to get an amateur ticket is Media Relations Assistant Jennifer Hagy, sporting N1TDY.

And November QST's "Behind the Diamond" victim Bill Moore, NC1L, has been promoted to DXCC supervisor.

Speaking of November QST, did it seem fat to you? At 272 pages it was a record!

* German Astronaut Ulf Merbold, DP3MIR, has been active from the Russian space station Mir, but a power supply problem prevents him from

using his digital voice memory and reduces his activity to only a few passes a day over Europe. DF5DP, the Deutscher ARC Coordinator of Satellites and Space Projects, said they do not have details about the problem because questions and answers about DP3MIR are relayed via the Moscow control center, a process that "turned out to be very complicated."
DP3MIR will stay aboard Mir until about November 3.
* The United Kingdom has lowered the minimum age for its full amateur license. Previously 14, the age has been lowered to 10 years, provided that the applicant has held a Novice license Class A or B for a full year and then passes the exam for either a full Class A or Class B ticket.
* The Dayton Amateur Radio Association is once again accepting applications for its scholarship program, open to all FCC-licensed amateurs who will graduate high school in 1995. The DARA offers eight scholarships of $2000 each. For more information and application forms write to DARA Scholarship Committee, 45 Cinnamon Court, Springboro OH 45066.
* As noted last issue, the "Big Dish" Earth-Moon-Earth operation from VE3ONT on the first weekend of the ARRL EME Contest October 29 and 30 was canceled. Now, however, in addition to likely having the dish available for the second weekend of the Test, November 26 and 27, the operators may be able to use it on November 24 and 25 as well. If so, they plan to operate on 50, 432, and 1296 MHz on those days (and on 144 MHz during the contest). All this was still tentative as we went to press.
10 years ago in The ARRL Letter
A letter from the FCC's Private Radio Bureau Chief Robert Foosaner clarified what was permissible during Amateur Radio support of the New York City Marathon. The prohibition against "business communications" became more of a concern because the marathon was, in 1984, awarding prize money for the first time. Foosaner said that of the three specific services amateurs planned to provide at the event -- a medical network, crowd-control logistics, and lead runner position -- only the latter was questionable, because news services could use the amateurs' communications to provide them with information. Foosaner recommended that lead runner information be passed on commercial frequencies.
The matter of "business communications" continued to be a thorny one for amateurs until the summer of 1993, when the FCC acted to ease prohibitions on "business communications." The FCC in 1993 also agreed with the League that proposals from commercial broadcast interests to allow Amateur Radio to be used in dissemination of information was not desirable. In 1983 the FCC had changed the way hams' transmitter power was to be measured, from dc input to PEP output; AM operators in 1984 began lobbying for special consideration, since the change in the rules actually reduced the amount of power they were legally allowed to run. The matter was not finally settled until the early 1990s.

: I bought a TS50S about a year ago, and it has become my favorite radio. As a
: real mobile fan, I installed it in the car and use it every day on a net on
: 20m. It's a great little radio. With the MFJ 949D mobile tuner (an extra
: $89) it works on most bands with the 20m Hustler whip. I bought it for $990
: plus the $89 for the tuner. A great combination.

: Then the 900 was advertized. As someone who likes bying newly released
: radios for mobile/portable operation, I bought it from HRO as well (it cost
: $1230). I also bought the mobile mount and the remote kit (the cable to
: extend the placement of the front panel).

: Well as soon as I connected it, it didnt work. I reset it and got pretty
: upset about it (I had bought a 747 about 1.5 years ago, and the wide AM
: filter was broken - so much about my Yaesu experience), but it still didnt
: work. It didnt turn on. Then my friend Dan, KA7AGN/DA1DW switched the
: battery switch off, reset it and voila! It worked. This leads me to believe:
: 1/static is a problem for the 900, and 2/Information that may help the user
: was not in the manual; it should have been.

: So if you buy a 900, remember that if it doesnt turn-on, it may be a reset
: static problem. Underneath the unit there is a Battery switch, push it to
: off, reset the radio, and put the battery switch back to on. It should work.

Thanks for the info that I can pass on. I haven't seen the problem as of yet
but will keep an eye out for it. Say hi to Dan for me when you see him. I
spoke to him via L/L a few weeks ago. I knew Dan when he was a student at
Keesler AFB and I was the prez of the radio club there. As a matter of fact
I gave him a ride to Cocoa Beach after he graduated from Tech School. I was
an air tragic control instructor at Keesler and was stationed at Patrick
before that.

I recently started working at HRO in Salem, NH and was surprised when Dan
called. I just happened to take that call. Didn't recognize the voice
but remembered the callsign..KA7AGN. Small World! I was KA5MWD then N1CLS
and then KB1LW in Mississippi. Just got WK1V in October of 90. Oh, I was
in Mississippi from June 81 till Sept 85.

Oh well, so much for the life history. Sure is a small; world though.

73 fer now. :)

Amsat-Oscar 13 reaches altitudes in excess of 27,000 miles at apogee.
Two-way contacts are possible between any two points on earth depending on the orbit/schedule of the satellite at the time. LA to Israel is a pretty easy hop. No CW required - but "true Techs" only please; appliance operators need not apply :-)

Does this mean you listen on your satellite uplink before transmitting?

Particularly with satellites like Oscar 13, the bird is by no means
sensitive enough to pick up low power local stations that would be
quite loud if you were to listen. Thus, listening on the satellite
downlink is no guarantee that you won't interfere with others.

From my own experience copying on paper at about 30 wpm, and in my head to about 40 wpm, I thoroughly agree that it's far easier to copy plain text than code groups. I believe it's primarily because, about a third of the way through a word, you recognize it. I am as likely to copy "ahead" as behind, anticipating the rest of the word. If I guess wrong, I seem to be able to correct without missing anything. When you're pushing the limit of your copy ability, it helps to know what character you're expecting next.

> code) into 4.5 MHz of the ATV.
>
> Any information would be appreciated.
>
> Andreas Iacovides 5B4SJ

Hi, here i report some sonsideration about your problem.

1) Ethernet use a Manchester line code in order to easy extract
the symbol clock and permitt the carrier sense operation in
the access. This is not necessary for the radio link.
You can convert the code line from Manchester to NRZ.
This gives a gain of factor 2 in the bandwith (10 MBit/s).

2) The use of multilevel digital modulation scheme seem
necessary when the available bandwith is less of the bit rate.
If you have not power problem i suggest you a amplitude
modulation like ASK. This is the most simple. In order
to recovery carrier and symbol timing you can use a differential
scheme.

3) The signal bandwith must be limited without introduce
inter symbol interference. The best filter is the raised
cosine. Other filters, as a Butterworth with 4 pole, can used
if you do a correct project of the filter.

4) A modulation with spectral efficiency 3 seem to be
necessary ! (4.5 * 3 = 13.5 MHz > 10 MBit/s)
Try a 8-ASK

5) For other information see:

Steve,

sorry, but you are just plain wrong here.

Please think about how things work, read part 97, and then
come back and join in the discussion with some useful ideas.

This horse is dead, you can stop beating it.

We once had a guy named Ernst Gehrels, who was pretty old and almost visionless, come in and pass 20 wpm, and everything up to and including the Extra class. Given his poor eyesight, we were there for FIVE hours. We set a time limit after that occurrence, like no exams beginning after a certain hour...

Pretty impressive, though.

: : IT>Any comments are welcome

: You should refer to the section of the rules prohibiting amateurs from using
: codes and cyphers in communicating. I think that they pretty explicitly
: exclude the use of PGP in amateur radio.

Those sections prohibit using codes and ciphers to obsure the meaning of
a transmission. A PGP signature is there to authenticate the message, _NOT_
to obscure anything. There's a difference between encryption, encoding, and
authentication. Sending compressed data is encoding - anyone who has the
protocol could convert it to plain text. (Sending a .ZIP or .gz file).
Encryption is where the intent is to hide the contents from everyone except
the recipient - a zip file or PGP signature does neither.

1648. Yaesu FT-5200 Crossband Operation ?

Message-ID: <1994Oct31.190821.7805@falcon.rd.ray.com>
Source record: 257610

I recently purchased a Yaesu FT-5200 2m/70cm mobile transceiver
and was told at the time of purchase that it permitted cross-
band repeat. I can't seem to locate this function in the
manual. Is there a modification required to do this?

Also, The "P" key on the microphone is unused according to the
manual. Is there a way to program this key. It would be very useful
to toggle bands using this key to answer a call on 440 when the 2m
VFO is active, and vice-versa.

Any replies, by e-mail, would be greatly appreciated.

It's the address on the AMPR network that your station is assigned.
It won't work on any other network. It's yours until you abandon it.

> 2) Do I have to have a station up shortly after i get the IP
> or can i just get the IP and hang on to it until i get the
> station up and running?

Your local IP address coordinator will assign an address to you upon
request. It would be nice if you used it for something. Typically it
will be yours until you move (they are regional at this time) or until
you give it up or abandon it or die.

>of 1000-2000 mi.

Oscars 10 and 13 are in molyna (sp) orbits. Those are highly eccentric with apogee at geosync altitude, but inclined at about 57 degrees from the equatorial plane. (Oscar 10 didn't make it to that inclination due to a failure in the kick motor system.) Because the period of the orbit is less than 24 hours, the subsatellite point of apogee moves around the Earth. If the apogee were at the right place, then the contact might barely be possible. I've worked Japan from here, and that's 140 degrees of longitude, but the window was short, and because of the apogee taking place in the northern hemisphere, a further shortcut over the pole was possible, so the great circle path was less than 140 degrees. The LA to Israel path wouldn't have that advantage.

I don't have an orbit program running here or I could tell you for sure if there's a mutual window.

1651. Warning - PDA Logic problems

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-31 19:29:25 UTC
From: n1ist@netcom.com
Message-ID: <n1istCyJy52.E4A@netcom.com>
Source record: 257602

I use PDA's Logic as a logging program, and until now, have not had any real complaints with it. Unfortunately, it's licensing scheme has made it useless. While I understand the need to prevent piracy, what they have done is ridiculous. Logic is shipped with a special license disk (non-standard format) that must be inserted during installation (makes sense) and *every time your machine's configuration changes*. That includes whether the mouse driver is loaded, how much EMS/XMS memory is available, how many serial ports are plugged into the machine, whatever. Because of this repeated 'Please insert the license disk' nonsense, I have misplaced it. They are refusing to send me a copy (How can they guarantee that I am not trying to use it in two places at once?) and want me to call them, long distance, from in front of the system so he can give me a magic number to re-license it, until the next system change. Do they really believe that a PC in a ham shack will not change its configuration frequently? Did they really lose that much due to copying and license disk sharing that they have to screw their customers?

I am now looking for a new logging program for general purpose logging with an occaisional contest thrown in that runs under DOS (or SUNOS) - no Windows that will do what Logic used to do. It should handle the QRZ callbook and have a log file format that is either available or easily decodable for making my own QSL cards. Please send me any suggestions, and I will summarize to the net.

Thanks very much. This sure made the second half of CQWW after I had to re-install DOS really fun.

RE: "Shave-and-a-haircut-two-bits"
-
There is another good one on CW, rarely heard now days.
It originated on the "Chicken-Fat" CW net which I don't believe meets
regularly but some of the survivors are still active (emphasis on the
chicken).
-
This one goes: dit dit dit di-daahhhhhh
-
It is supposed to be analogous to a chicken
going: buck buck buck ba-baaawwwwkkk
-
It was the farewell transmission for those checking out of the net. To
do it right you need a straight key to get the correct duration on the
last "element." The real pro's, with well developed dexterity and
coordination, could even wiggle the VFO slightly on the daahhhhh for
proper effect.
-
Illegal as hell, of course.

>in the Satellite Experimenters Handbook for it.

Unfortunately, this is bad advice. An analysis of all possible passes
for a LEO sat shows that it will spend the majority of the time you
are in it's footprint at an angle of less than 30 degrees above the
horizon. The turnstyle over a groundplane advocated in the SEH has
a *null* at those angles. For a non-steerable antenna, a simple
quarterwave vertical works better (at least 3db better, usually more).
It has a null straight up, but the sat will spend a very short time
directly overhead, and path loss is least during that period. During
the low part of passes (below 20 degrees), a gain vertical can be very
useful. This was reported in the AMSAT Journal a few years ago, but the
SEH hasn't been updated. A better non-steerable antenna is the Lindenblad.
It offers a flattened hemispheric coverage with circular polarization.
CP is a big advantage due to spin modulation on most sats, I highly
recomend building one of these if you aren't going to be using steerable
antennas. (I haven't analyzed the new "eggbeater" style antennas, but I
expect they're better than crossed dipoles too.) The only time the crossed
dipole has the edge is in direct overhead passes. Those are relatively rare,
and the amount of time the sat is directly over any given spot is a very
short time compared to the total time you'll be in it's footprint.

I don't suppose this counts, but one of the MIR cosmonauts passed everything
but the 20 WPM code at one sitting when he was visiting the Space Symposium.
He had to handle the exam in English too. Since he only qualified for Advanced,
I guess he can't operate a station in space. Gotta have that high speed
Morse in orbit. :-(

That's absolutely right, and I do listen on the uplink before transmitting.
Several times I've heard simplex FM QSOs going on. I've politely broken
the QSO and asked them to respect the satellite subband. A couple of them
have told me to get stuffed, so I just QSY down the passband a bit and
go about my business. I do *not* have the right to transmit over an
on going QSO, and neither does W1AW.

Ditto experience here as a VE: a U.S. naturalized Swede (now deceased)
who had been in various places (like Reunion Ils.), started with 20 wpm
and did all the theory Novice thru Advanced...simply ran out of time.

Ditto for a Russian-born op, immigrated to Canada and licensed, and now
here simply didn't have time to it all done in one session.

In both cases, they came to another session and wrote the Extra Theory.
And, need I say it, nearly perfect scores on all the exams also. :^)

Really, the limitation is time, time, time.

Just as an added clarification, I thought that something Chris Imlay mentioned concerning this legislation was quite cogent.

There was recently a court case in florida where the amateur was ordered off the air because his operation was deemed a public nuisance by the court. (He isn't ALLOWED to operate!)

Chris claimed that this legislation would have been a pretty good defense against such a claim since the U.S. Congress has stated unequivocally that amateur operations are "A good thing." A judge finding to the contrary would be pretty hard after that.

Steve KA6S

(I heard the above at recent Pacificon convention in Concord, CA a couple weeks ago.)

>price was right he'd do the converting himself.

Yep, they're different. Moto (and GE) made models that cover
406-420, 420-450, and 450-470. The 450-470 units can be pulled
down into 440-450, but they won't make 420 without serious
modifications to the front end. Same with the GEs. They use
diecast aluminum helical resonators and they won't tune low
enough. You can take either of the lower frequency models
and pull them *up* fairly easily.

The 420-450 radios aren't made specifically for the ham market.
They were made for overseas markets where that spectrum is
commercial or government.

>With the availability of temperature controlled and lately, digitally
>selectable tip temperature soldering irons, what temperature should
>I use for common operations like working on printed circuit boards
>or soldering RG-8 coax connectors?

Tip temperature should never exceed 398 C (748 F). Lower tip temperatures can be used, down to about 500 F, for small PC boards. The key thing you have to vary is *heat transfer capacity*. Heat and temperature are two different things (like voltage and current). To get more heat flow at a given temperature, you use a bigger tip. To work with heavy ground planes or large connectors and cables, you need a lot of thermal mass in the iron, IE a fat bit, so that maximum heat transfer can take place without cooling the tip excessively. If you try to increase heat transfer by raising the temperature in a small bit, you run the risk of delaminating PC traces, or melting insulation in cables, because the whole work will have time to heat up before soldering temperature is reached at the joint, IE heat transfer *through* the work is faster than through the tip. What you want is *fast* heat transfer to raise the object to be soldered to the melting point of solder (roughly 462 F for eutectic mixtures), without getting the temperature so high that you risk delamination. A big bit does that best.

[Article crossposted from sci.electronics,alt.energy.renewable]
[Author was Mark A Lilly]
[Posted on Mon, 31 Oct 1994 00:21:48 GMT]

Hi,

I'm a total novice about electricity and electronics (despite college physics classes), and i'm wondering if anyone knows a basic primer on the 'net that might help me advance my knowledge. I want to know what voltage is, and what amps are, and how they relate, and what watts mean, and how i can understand them pragmatically. I eventually want to build solar powered energy sytems into my house (when i get one) so i figure it best to start learning now.

Thanks,

Mark

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 OCTOBER AND FORECAST FOR 01 NOVEMBER - 03 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 97/44

GOES satellite data for 30 Oct
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA (normal)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Nov 02 Nov 03 Nov
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Nov: 96/43

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to minor storm.

Estimated Indices : A K Observed A Index 30 Oct
Learmonth 24 3335 5433
Fredericksburg 30 32
Planetary 38 41

Observed Kp for 30 Oct: 3556 5454
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Nov 30 Unsettled to active, possible brief minor storm
periods.
02 Nov 30 Unsettled to active, possible brief minor storm
periods.
03 Nov 25 Unsettled to active
COMMENT: IPS Geomagnetic Warning 8 was issued on 27 October and is
current for interval 27 October to 4 November.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Oct normal-fair fair poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Nov normal-fair fair poor
02 Nov normal fair poor
03 Nov normal normal-fair poor-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
31 Oct 13 15-20% depressed during local daylight hours and
15-30% enhanced during local night.

Predicted Monthly T-index for October: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Nov 10 10 to 15% below predicted monthly values
02 Nov 10 10 to 15% below predicted monthly values
03 Nov 10 10 to 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 9 was issued on 27 October and
is current for interval 27 October to 4 November. Frequencies were
depressed with blanketing sporadic E observed as well in the early
UT day yesterday at Townsville , then the frequencies recovered to predicted
values.

1672. Antenna Help Please!!!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-31 23:22:34 UTC
From: sdarragh@cisco.com
Message-ID: <sdarragh-311094152234@sdarragh-mac.cisco.com>
Source record: 257619

I am trying to figure out a way to put up a low profile antenna. I have a
little room to play with in regards to how profile it is. I asked if I
could put up an antenna on the rain gutter and she said keep it as low
profile as possible.

My situation:

#1 I am in an apartment building on the second floor.
#2 I will be locating the station in my bedroom.
#3 Outside the bedroom window is a rain gutter.
(My plan thus far is to mount a Hustler MO-4 trunk lid mount mobile

antenna to it, and use some heavy duty monofilament for just a
little
support.)
#4 The roof is at about a 30 degree slope.
#5 I may be able to get attic access. (However I would rather not for sake
of
drilling holes in the roof. The land lord may become
upset.)
#6 There are also high voltage lines about 30ft from my window.
#7 In between the apartment and the power lines are 3 trees about 20ft
apart.
#8 These are willow trees hence unclimbable
#9 I will be running between 25-50 watts and CW ONLY!

Needs:

#1 Keep TVI and RF interference to a minimum. (For obvious reasons.)
#2 Drill no permanent holes. (I was planning on bringing coax through the
window and screen into the apartment.)

Questions:

#1 Has anyone used the Hustler antenna? (I know of one person and he has
WAS
and worked 155 countries.)
#2 Are there any other ideas?
#3 Should I have many RF/TVI problems?
#4 Will the high voltage lines screw me up?
#5 Any additional comments would be greatly appreciatted.

Scott

rest deleted....

what you heard was an "Air Force One" minus Clinton. When the
aircraft is not carrying the president, it is known as
29000. Andrews is Andrews Air Force Base, which is where
the plane is based. Be aware that there is more than
one "AF 1", that designator being used only when the president
is aboard. (i.e. Clinton aboard a small business jet would
also be AF 1.) I believe 29000 is the new B747, though it may
be the 707 that immediately preceeded it. I'll have to look.

When I first learned the code, I really hated it. For the
first few months after I
got my General, I really avoided it. Now, most of my QSO's are
in code and I've come to enjoy it more than voice. I feel I
get a greater satisfaction out of a code QSO because of the
effort involved.

Yes, this happened at the VE session at which I got my Tech+ ticket.
(Oct 1992 in Champaign, IL.) The UIUC radio club held a class for
training new novices and techs; we were all really nervous about it.
Joel and I were talking before the exam; we weren't sure either of
us would pass the 5wpm. We were given the (excellent) advice of
sitting through the 20wpm and 13wpm tests, which were given before
the 5wpm, so we could "adjust our ears" to fast code, making the 5wpm
seem less fast. He passed the 20wpm test, then went out and walked
through all the written exams (he's a EE, I think, so theory wasn't
too much of a problem). (I missed the 13wpm by one question!)

He went in with no license and walked out an Extra. Yow!

Well, I went from nothing to General in one step...missed the Advanced by only a couple questions...didn't expect to get that far so hadn't even read the Advanced manual. At the same session a guy went from nothing to Extra. This was at an ARRL session in Flagstaff, AZ about 4 years ago. I read in an ARRL VE manual that it happens a dozen or so times a year in ARRL sessions.

Not real common but certainly not unheard of.

Joe N9YJZ <joen9yjz@aol.com> wrote:

>I almost see the code as somewhat of a screener for the "losers" in the
>radio hobby.

I haven't made my mind up either way, but it seems possible that while the code may screen out losers or dabblers, it may also screen out people who can contribute something. What happens now, those who are interested enough in the hobby but don't like code, they bite the bullet, learn code, and progress from there.

Now, I like code and the challenge of learning it. Having listened to QSO's going on at 20+wpm, I was fascinated that it was even possible and thought surely I could do a mere 5wpm.

But the questions are: (1) why do people become hams? and (2) would the elimination of the code requirement create an influx of low-lifes that would permanently destroy the nature of ham radio? Surely people don't become hams just to talk to strangers or family. CB radio or cellphones satisfy that much cheaper than ham radio. A friend of mine, a no-code Tech, is highly interested in ATV; that's his motivation. On the other hand, there may be status seeking yuppie scum who just have to have the latest whizzy handheld or transceiver, even though they will never use it to an extent anywhere near how it was intended to be used.

Anyway, passing 5wpm isn't that difficult to get all worked up about. Some people may discover they actually like it.

I went from no license to advanced first time. Didn't pass Extra theory because I never studied for it, figuring I'd never pass 20WPM.However, there is a big difference between copying 20WPM and answering multiple choice questions. I was actually solid at only about 15WPM. Got extra the next month. I wouldn't necessarily recommend this. I sort of regret never having been a Novice.

1690. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-01 12:00:16 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-783691211@gonix.com>
Source record: 257542
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.10 10/30/94 22:07:48
Changes: Uniform Resource Locators (URL's) now used throughout

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to Greater Omaha Public Access Unix, which was motivated by a desire to seek a stable site for the Elmers List for some time to come. See my signature below for the new addresses. My old E-mail addresses, at the University of Nebraska at Omaha, will probably work for the foreseeable future, but are not guaranteed.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at the Ohio State World-Wide Web Server (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those

accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and

desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or

"usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers

The advantage of reading the Elmers list at this site via WWW client software is that all URL's are converted to hypertext links.

see also:

news:comp.infosystems.www.misc
news:comp.infosystems.www.providers
news:comp.infosystems.www.users

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO-Unix tcp/ip and sendmail coming soon!

ampr.org IP Coordinator for California - Los Angeles County (44.016.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

To contact: J. Angus PO Box 4425 Carson, CA 90749-4425 USA
Or Phone 1 (310) 324-6080 all day monday, 7 am - 10 am tuesday through friday, 7 pm - 11 pm tuesday through thursday.

[Editor's note: All ampr.org coordinators are listed in the document at ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators.]

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now include the latest info on YEASU and ALINCO products. If you have a product that you wish to have evaluated for the general amateur community, please contact before

sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

PO Box 515
Millbury, MA 01527-0515

ATTENTION RADIO NEWCOMERS!

Are you interested in radio communications but don't have enough information? Do you have questions but no one to ask? Are you looking for a publication geared toward the novice radio enthusiast?

***** FIRST CONTACT *****

"First Contact" is a newly forming publication. An
electronically distributed email newsletter via the Internet
for the beginner. Here is a forum to get the information
you're craving. Get involved in this fascinating hobby!
Scanning, ham radio, shortwave listening, CB radio,
General Mobile Radio System (GMRS), etc. will all be
covered.

You input is essential to the success of this publication. I
need to know what you want to know and what subjects
you want covered in the newsletter. I will attempt to
publish on a monthly basis, possible bi-weekly if there is
enough interest.

The only "cost" on your part is to fill out a subscription form
completely (E-mail for a copy). A classified section is being
contemplated with a small fee to advertise. Hard copies
will be available to those without email access. Please
contact me for details.

Everyone is welcomed to subscribe whether you've never
turn on a radio or whether you're an old-timer. I am
looking for authors to contribute short articles on the
subjects you request.

So let's get "First Contact" off to a good start! Get your
radio information via email. Subscribe NOW!

/**\
* Rich Bono IMRICH UUCP:rbono@necis.ma.nec.com *
* (508) 635-6300 NM1D AMPR: nm1d@nm1d.nh.usa.noam *
**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

ftp://wuarchive.wustl.edu/mirrors/msdos/hamradio

or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

AA4RE Packet BBS

Poster of RACES Bulletins

Thanks to Chris Spell <spell@seq.uncwil.edu>, there is now a mailing
list for AA4RE BBS program sysops. I hope all will subscribe. It
should be very helpful to all of us.

To send a message to the mailing list send it to:

aa4re@matsci2.uncwil.edu

To subscribe to the mailing list a user needs to send a message to:

aa4re-request@matsci2.uncwil.edu

With the following in the body of the message:

subscribe aa4re your_account_name@your.address.whereever

To unsubscribe one would send this text in the message:

unsubscribe aa4re your_account_name@your.address.whereever

++

Scott Ehrlich, Amateur Radio Callsign: WY1Z
How to reach me: wy1z@neu.edu [Internet], wy1z@wa1phy.ma [Packet]
Boston ARC FTP archives: ftp://oak.oakland.edu/pub/hamradio/
Boston ARC Web page: http://www.acs.oakland.edu/barc.html

I've played around with Mac and PC hardware, as well as dabbing a
little with DOS, UNIX, MacOS, with a tad of VMS operating systems.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

All ARRL bulletins are archived in the Boston Amateur Radio Club FTP area: ftp://oak.oakland.edu/pub/hamradio/w1aw-list/

A mirror of all files available from the ARRL info server is also available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

Programs mentioned in QST are in ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too: ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Mike Ardai, n1ist@netcom.com, runs the following Boston ARC mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)
ky1n-list (KY1N VEC listing, Local Boston area VE sessions)
barc-list (local Boston-area stuff)
barc-races (again, local)
fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)
qrp-l (QRP, or low power, radio, previously maintained by Bruce Walker at think.com)
arrl-exam-list (amateur radio license examinations scheduled in the US and in some foreign areas.)
arrl-ve-list (ARRL VE Announcements, run by ARRL VEC Bart Jahnke)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list, I have incorporated both of these listings into the Boston Amateur Radio Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

You will need Lynx, WWW, or Mosaic to view them. Ask me for more details about this.

++

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers, and, if possible, solutions. I plan to forward these to my contact at the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Electronic versions available soon. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If anyone is having a problem with CATVI, send a 9X12" SASE with 4 units of postage to the ARRL Technical Department Secretary. Ask for the "EMI/RFI Package" and "EMI/RFI - CATV." The CATV package includes a reprint of the article I wrote for Communications Technology -- the journal of the Society of Cable Television Engineers. Your local cable company will recognize this publication and will give credence to the words therein.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

ARRL info server files may also be accessed via anonymous FTP at:

ftp://oak.oakland.edu/pub/hamradio/arrl/

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there

are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note: The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any offical governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a

teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

ftp://rtfm.mit.edu/pub/usenet/radio/ham-radio/faq

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://rtfm.mit.edu/pub/usenet/radio/cb-faq

Please direct all FAQ submissions, feedback, and administrivia to
hamradio-faq@kluft.com or cb-faq@kluft.com.

As with any volunteer effort, new volunteers are often needed. We need
new editors to post the above FAQ's. Preferably this should be
someone who has enthusiasm for hobbyist radio, experience with UseNet, and
the ability to work with the other editors. No single person can know
all the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is
written in PERL. So it would be a plus for volunteers to post the
FAQ to have PERL installed on their system and be able to use "cron"
or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact one of the above administrivia addresses.

A mailing list for rec.radio.amateur.* FAQ and Netiquette posting
maintainers, as well as anyone with a sincere interest in helping
keep the rec.radio.amateur.* newsgroups the friendly and useful
forums they are today, is also available. To subscribe, send E-mail
to rra-wg-request@amdahl.com.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called "elmers@iastate.edu" we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

+----------- These are my opinions, not anybody else's, so bog off. ----------+

There is now a mailing list set up for the UK TCP/IP Networking Group (UKIP). This is a loosely-organised group set up to promote the use of TCP/IP networking protocols over radio in the UK, and to encourage the establishment of high-speed backbone links and network gateways.

If you want to subscribe:
Send mail to ukip-request@cs.nott.ac.uk. This is handled by a human rather than a listserver, so be polite :-)

To post to the list:
Send mail to ukip@cs.nott.ac.uk. Subscription requests and other administrative bits and bobs should go to ukip-request, _not_ to the list as this just means that lots of people read your subscription message and get cross.

I can personally answer quite a lot of the questions about TCP/IP-related subjects.

Be forewarned that the list is fairly technical in its discussions, so probably not the best place for beginners to start :).

Bob Myers KC0EW
Hewlett-Packard Co.
Ft. Collins, CO

myers@fc.hp.com

Antennas, Novice/Tech instruction, batteries, power supplies, RFI, equip. testing/troubleshooting, FAQs, homebrewing. Basic theory questions also welcome.

My particular interest is in antennas and transmission lines, but I'm also more than willing to answer whatever I can in general radio theory, propagation, analog and digital electronics, etc.. (I'm a display engineer in "real life", have done my share of digital design, and have taught communication electronics at the local community college. I'm also active in some display and television standards activities.)

W. David (Dave) Paperman WQ5Y

wpaperman@msmail.his.tch.tmc.edu

P.O. Box 7039
Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all
types. Unfortunately I have not taken the time to catalog all this
information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00/page including US postage. I will quote on larger
manuals.

This is NOT my career or a business. Any requests must be prepaid or I will
ship COD at additional postage costs.

Terrence R. (Terry) Redding WB5LMJ

DOMAIN: terry%red@lawton.lonestar.org
UUCP: . . . !rwsys!lawton!red!terry
PACKET: WB5LMJ @ WB5MJS.OK.USA.NA
Voice 405 536-8822, Ben's Place (Benjamin Franklin) BBS 536-6988 9p to 6a
PhD candidate, University of Oklahoma in Adult and Higher Education
Educational Advisor, American Radio Relay League
221 SW Crystal Hills Drive, Lawton, Oklahoma 73505

I am primarily an adult educator conducting research in self-directed
learning. I have been involved in the following activities:

- Teach licensing classes, since 1974.
- Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy
Club, Lawton Astronomy Club.
- Public speaking and publish on growth in volunteer organizations,
marketing adult and higher education and teaching amateur radio
courses.
- Research in adult learning theory, adult motivation and organizational
theory.
- Conducted a SAREX activity that involve seven communities, 21 schools
and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Peter Reynolds reynolds@stc.nato.int CompuServe: 100276,1340
voice: +31-70-314-2401 fax: +31-70-314-2111 radio: KE4BAD
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague, The Netherlands

I am very lucky in that I earn my living in radio communications, so my
expertise is fairly broad (but not focused on amateur techniques only):

Modulation types - FSK, PSK, MSK
Error control - various types of ARQ and FEC systems
RF - Antennas, HF propagation
Networking - TCP/IP over HF
Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is

drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In the future, an archive of files will be accessible by anonymous
ftp or possibly by email. In the meantime, check the FTP site:

ftp://ftp.ucsd.edu/hamradio/

for AMSAT-related files. Consult your local guru for help on using
by anonymous ftp for AMSAT-related files. Consult your local guru
for help on using anonymous ftp.

The message remailing service permits users to send each other mail
on the Internet without keeping track of each other's Internet
address. The remailing service allows each user to receive mail sent
to the address callsign@amsat.org, where callsign is that user's
amateur radio callsign, or other unique identifier. Mail sent to
that address will be routed first to the AMSAT.ORG host at UCSD in
San Diego, then remailed from AMSAT.ORG to the network address
specified by the user. In most cases, this process delays the
message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to
receive certain types of messages. There are public mailing lists
available to anyone, and private mailing lists available only to
certain people (for example, AMSAT Board of Directors members or
PACSAT command stations). Currently the following public mailing
lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from
the AMSAT News Service. These messages are posted in

a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will
usually be processed within a few days. In general, you will not
receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the
one in your From: header.

You should not send messages about your subscriptions to any of the
mailing lists. Send them to listserv@amsat.org instead. This
includes questions, requests for changes, requests for information
about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing
service may be obtained by requesting the "address book". Note that
the address book as distributed contains only the callsigns of the
available addressees, not their actual Internet addresses. The address
book is updated occasionally, and does not necessarily contain the very
latest information.

You may request to be added to the list, to be deleted from the list,
or to have your Internet address changed on the list. Please include
your callsign if you have one. If you don't have a callsign, that's
OK, but please say so. If you have more than one Internet address
you want to have available on the AMSAT.ORG remailer, you may so
specify. For instance, if you have a regular Internet address and a
CompuServe account, you may appear in the address book as both w1xyz
and w1xyz-cis. Mail sent to w1xyz would go to your Internet address,
and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts
have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing
lists described above. Send a message to listserv@amsat.org,
specifying clearly which mailing list(s) you want to add or drop, and
giving your callsign if you have one. When you subscribe to a
mailing list, you will automatically be added to the remailing
service as well, because the mailing lists are maintained by
callsign. If you have more than one address listed in the remailing

service, please indicate which one(s) you want the mailing list
messages sent to.

Additional mailing lists, public or private, can be set up as needed.
Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to
listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/HamRadio/scripts/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipg.upenn.edu/pub/yee/uploads

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.
```

+ Author of NA4G's National Electrical Code for Hams
+
+ ABSTRACT
+
+ This work was presented as a talk to the Homebrew Special
+ Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
+ (RARS), on 15 January, 1991 and was revised for another
+ presentation on 26 January, 1994.
+
+ This document contains excerpts of the National Electrical
+ Code (NFPA 70-1990) that, in the author's opinion, apply to
+ the installation of amateur radio equipment as would
+ commonly be found in most amateur radio stations. Direct
+ excerpts from the Code are contained within inset
+ quotations. Paraphrased excerpts from the Code are
+ itemized. The author's interpretation and discussion of the
+ Code is set full-width. The author's interpretation and
+ discussion of various sections of the Code is not meant to
+ be all-encompassing, nor the official interpretation of the
+ National Fire Protection Association, nor of any offical
+ governing body having legal authority of jurisdiction over
+ electrical installations, but is meant to be used as a
+ teaching tool for amateur radio operators.
+
+ For ease of access, the group of files have been 'rolled into one'...

+ +----------- These are my opinions, not anybody else's, so bog off. ----------+
+
+ There is now a mailing list set up for the UK TCP/IP Networking Group
+ (UKIP). This is a loosely-organised group set up to promote the use of
+ TCP/IP networking protocols over radio in the UK, and to encourage the
+ establishment of high-speed backbone links and network gateways.
+
+ If you want to subscribe:
+ Send mail to ukip-request@cs.nott.ac.uk. This is handled by a
+ human rather than a listserver, so be polite :-)
+
+ To post to the list:
+ Send mail to ukip@cs.nott.ac.uk. Subscription requests and other
```

```
+ administrative bits and bobs should go to ukip-request, _not_ to
+ the list as this just means that lots of people read your
+ subscription message and get cross.
+
+ I can personally answer quite a lot of the questions about TCP/IP-related
+ subjects.
+
+ Be forewarned that the list is fairly technical in its discussions, so
+ probably not the best place for beginners to start :).
+
+ ++++++++++++++++++++++++++++++++++++++++++++++++++++++
+
I'll be glad to help out with tube circuits and VE testing.

1695. Help with ICOM hand-held please !!

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-01 12:26:06 UTC
From: rob@bri.hp.com
Message-ID: <395c4u$8hr@hpwin055.uksr.hp.com>
Source record: 257547

Hello All,

I'm posting this request for my Brother (A recent convert to amateur
radio).

He's just bought a twin band (2m and 70cm) hand-held ICOM unit (The model
number is 21E), problem is ..... No user manual with it !!. This little
beast has approx 10 functions per twiddly-knob .... so usability has
become a bit of an issue.

The question : Where can he get a manual for it ?? is there an address in
the UK for ICOM (perhaps they'd photocopy and send one to
me) ? ... Does someone want to scan one and send me the
TIFF file !!!

All / Any help is much appreciated !!!!

Rob Pritchard

>technicians, and I would sure like to see everyone who wants an
>upgrade to get one, but when someone comes into a testing
>session and has been studying CW for 2 weeks, and wants to pass
>the 13wpm, I get kinda riled up.
>Wcoyle@delphi.com N3OGH

(in another message, n3ogh says he's been a ham for around 3 years now..)

<sigh>...newbies. why would you ever get riled up over that? some people don't have a problem learning code - comes naturally to them - others have to struggle.

So the candidate has been studying only for 2 weeks. did he pass or not?

Anyone that can pass the tests deserves the welcome of their fellow hams.

what about those guys that come in and go from nothing to extra in one hop (we've had several over the years here...some were hams once and let their license expire, others were/are professional CW operators (military intercept, shipboard radio op, etc.)).

there are guys out there that design radio equipment for a living and aren't even hams! yes, they might even eschew a license because they don't want to be associated with "amateurs"....

bill wb9ivr.

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin, VK2PFQ.

Well it seems like I got my weeks mixed up. I thought I would not be here this week, but in reality I have "been and gone" to where I was supposed to go...and I had enough time this week to prepare this item, but I won't be back in time next week.....If you can work that out.

During the week I attended the Local Government Association Conference, where the "Old Chestnut" of Amateur Radio Antennae reared it's ugly head once more. Perhaps a little background is in order.....Way back in 1980, when I first joined Local Government, there was a dispute raging about Radio Towers in backyards. Rockdale and somewhere else.... I can't remember exactly where. In an effort to standardize this across all Local Government in N.S.W., Blacktown City Council, the Council on which I am a Councillor, sponsored a motion suggesting that subject to certain restrictions, antennae would be allowed by Councils without the need for a Development Application. The conditions were:
Maximum height 50ft. (15.24 metres) All guys to remain within the property. That is, NOT attached to the dividing fences. No intrusion of antennae elements over the adjoining properties. If all these requirements were fulfilled, then only a building application accompanied by a structural engineers certificate would be required.

The motion passed the conference..... AH! a commonsense solution to the problem at last! BUT, the Department of Planning in their wisdom would not agree. It was left up to individual Councils to decide the fate of antennae in their own backyards. Well, it was a good idea at the time, and had it been agreed to by the Dept. of Planning, then the troubles and woes of Hams would have been a thing of the past. Well I tried! Blacktown City Council, I am pleased to say, judges each case upon it's merits and after notification to adjoining neighbors. another Department of Planning requirement, not a Council requirement. This was introduced sometime in the late 80's. An acceptable compromise is always reached. That doesn't mean Blacktown approves 100ft. monsters in residential areas....However, to return to the original story ....

The motion before the Conference used the words.....
Transmitter/Receiver Masts and Towers. Again a little history.
It seems that under the Telecommunications Act, 1991 Telecom, Optus

and Vodaphone can erect Mobile Phone Towers as, when and where they wish. Sure, they tell Councils that they intend to erect these Towers, but Councils are powerless to prevent their construction. Inevitably, these monstrous things, the height which is the envy of all of us, are sometimes put in the worst possible places. There seems to be no concern for aesthetics ....Just put'em up wherever there is a good site. I sometimes wonder how the Government would react to one just outside the Opera House or, dare I suggest, on top of the Cahill Expressway!!!! At least that would give the Politicians a better excuse than they currently have for pulling the thing down! As you can imagine, this makes the Planning Departments of Council's furious, not to mention of course the neighbours. The consequence is then, that when us poor little Hams appear at the Counter with an application for a Tower. The wrath of a majority of Local Planning Departments throughout the State and indeed, all Australia, descends upon the heads of us poor little bloke on the our side of the counter..... all we want to do is pursue our hobby. A hobby from which we don't make a "Brass Razoo".... quite unlike our telecommunication friends.

Well, so what, you might say. Why's Corbin telling us about this, well it's simple. If any of you could have witnessed the debate, you would have seen elected people getting up and agreeing with the proposition..... The reason? They wanted the power ONLY so that they could.... knock the applications back. Fat lot of hope that leaves the Radio Amateur. For everyone's information, these Councils included, Sutherland, Marrickville and Wyong amongst others. Mosman had the idea that these Facilities should be shared by all service providers on a single Tower. At least they did not want to knock them all back.

Despite the attempts of yours truly and VK2DFZ, Councillor Metcalfe from the Greater City of Taree Council, the motion was carried. A sad day for Amateur Radio.... It might pay all Ham Radio Ratepayers at Council Election time next September to write to all candidates and ask them of their opinions on Amateur Radio Towers. In fact there is no reason why the W.I.A. could not do that come to think of it!.....Anyone want the job?

There was another motion on Satellite/Microwave dishes in Residential areas in relation to Cable/Satellite T.V. Hornsby Council sought to develop a Statewide Policy to cover approval of all such structures. This meant that if the Local Government Association decided that dishes of 30cms. (that's 1 foot) were the go, then everyone from Bondi to Broken Hill would be bound by such a rule. Fortunately, Conference listened to my views on the subject and the motion was defeated. This means ladies, gentlemen, boys and girls, get those dishes up before your council places a requirement upon them. Blacktown allows l.2m dishes without the need for any application....Progressive is the word you're all looking for HI! HI!

As promised Part 2 in the series from David 9VIRH/VK3QV on the IARU Region 3 Conference.....And I quote...

"A couple of rectifications.....about two weeks ago, when I summarised Mainland China's report to the Conference, I mentioned the various CW speeds required, up to 80 words per minute. Well, when Mr. Chen Ping, the Delegate, presented his report, he apologised for a small printing error, the "w" for words per minute is in actual fact a "c" for characters per minute. And this brings the certificate requirements more in line with normal practices, 80 words now becomes 80 characters or 16 words per minute. Let me assure you that it had quite a number of the delegates confused.

The delegates were split up in three working groups, A, B and Finance.... lets first start with the Finance Group under chairmanship of Anthony Jayaranjan, 4S7AJ....an important suggestion, to base subscriptions on the NUMBER of transmitting amateurs in each country, was not accepted and the present system of a structure based on the number of transmitting MEMBERS of each society was maintained.

Expenses at the Secretariat are kept to a minimum although, for the coming years, money has to be found to cover costs for the new position of Coordinator for beacons in Region 3. The outcome of it all is that the fees had to be increased by 13%. The rates are now as follows: number of members up to 5000 is US $ 71 cents per member, number of members from 5001 to 10000 US $ 44 cents and organisations with over 10000 members pay US $ 12 cents per member. The WIA is most likely forced to pay US $ 71 cents per member unless membership grows to over 5000 when the subs will drop to 44 cents per member. Smaller organisations, such as in some of the Pacific countries, must pay a minimum of US $25 per annum to remain members of IARU Region 3. And if you think that all this is big bikkies, the total expenditure for next year is 42.750, then 45.250, growing to 46.800 dollar for the period 1997/1998. All in all, a real shoestring budget.

Now to working group B, the technical group under chairmanship of Kevin Olds, VK1OK. A sub-working group was established to review packet radio. And I will start with this one, as many amateurs are gradually sliding into this mode. The packet radio guidelines established in 1991 by region 3 and subsequently improved on in Region ! in 1993 were further discussed and the group resolved that the term DIGIMODE be adopted to cover RTTY, PACKET, PACTOR, AMTOR, G-TOR etc. It further resolved the revised guidelines for Digimode operations and recommended that the region 3 Administrative Council adopts those changes.

Some points from the new guidelines....Digimode operators take pride in being self regulated, they should like all other amateurs, observe the published band plans, they should not send the following traffic, either direct or via mail boxes.....all advertising for selling, buying or trading goods, all statements of propaganda or political or religious subjects, all appropriate language such as swear words, obscenities, defamatory or libelous language, all material that may infringe copyright,

all material which infringes privacy, whether personal or corporate. As a matter of fact, Digimode Bulletin Board Operators are now more or less held responsible for all messages forwarded by his or her system and may take action to exclude a user who persistently contravenes the guidelines for Digimode operations. This exclusion should only be used as a last resort after local regulations. finally, Digimode Bulletin Board operators should be aware of their responsibilities for the content of messages and are encouraged to use authentication mechanisms."...Where Have I heard that before?

" The subgroup further requested the Conference to endorse the establishment of a region 3 IARU Digimode SYSOP Forum to coordinate Digimode Bulletin Board activities, implementation of Digimode IARU Guidelines throughout the region and liaise with similar forums in regions 1 and 2.

As this sub-group's recommendation were accepted by working group B, whose final recommendations were ultimately adopted by the plenary closing session, these recommendation can now be looked at as being the final rules to be adhered to.

Next week more on beacons, EMC and standards, IARUMS, satellites and satellite bandplans......."

Thanks David.

Part 3 next week....

See you then.

WICEN News

We would like to thank all who took part in last week's Canoe Classic; we are advised that the event next year will be on 14th October, so hopefully this will not conflict with any other event.

This weekend is the WICEN Co-ordinators conference at Charles Sturt University, Bathurst, and a full report will appear in a later broadcast.

WICEN has been requested to assist with the NSW Water Ski Associa-tion Ski Racing Division "Lion Island Classic", on Sunday 11th December 1994. Long distance communications are required from Croppy Point to Laughtondale, and this will probably involve 80m. Three stations are needed, from 0900 to 1430, and those interested are invited to contact David Ramsay VK2KLX.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to either VK2AAB or VK2OP BBS. Alternatively, you can use the WICEN telephone BBS.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) Inc. operates a telephone BBS, and it is accessible at speeds from 300 to 14,400 bps on (02) 888-2763. Brett VK2XMU is the "Sysop", and all listeners are invited to use it. Many programs, such as "virus scanners" and "PGP", are available for downloading.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

Listeners who own a Global Positioning System (GPS) receiver may have noticed some funny goings on in the last week. According to a recent advisory to NavStar users, "USERS OF GPS TIME TRANSFER INFORMATION ARE ADVISED THAT THE [positioning] DATA IS SUSPECT AS OF DAY 266 (23 SEP 94) BEGINNING AT 1500 UTC AND CONTINUING UNTIL FURTHER NOTICE."

A subsequent advisory noted that "INVESTIGATION HAS REVEALED THERE IS NO CURRENT OR PAST PROBLEM CONCERNING THE TRANSFER INFORMATION. WE HAVE DETERMINED THAT SOME USERSETS MAY NOT ACCOUNT FOR ROLLOVER OF THE 8 BIT GPS UTC REFERENCE WEEK. ... THE USER MUST ACCOUNT FOR THE TRUNCATED NATURE OF THE UTC REFERENCE WEEK. THIS USERSET DISCREPANCY WILL OCCUR EVERY 255 WEEKS AND WILL LIKELY CLEAR AT END OF WEEK ROLLOVER."

In other words, it appears that some GPS receiving systems use a single 8-bit byte to represent the "week" field of the GPS time reference. As any computer buff can tell you, a computer byte can represent numbers from 0 to 255... If the receiver's software can't cope with the "week" rolling back over to 0, then the displayed position may be incorrect. Hopefully though, the problem will sort itself out sometime today, but even so will return in just under five years' time. You have been warned.

****

If you find it a bit difficult to get hold of 3 1/2 diskettes in the coming months, blame it all on Microsoft. It appears they have bought up four months' worth of the entire world supply of floppy disks, in preparation for their Windows 95 product. How this product release will affect worldwide supplies of CD-ROMs remains to be seen.

****

A new astronomical observatory at the University of Western Sydney was officially opened this week by NASA shuttle astronaut and planetary astronomer, Dr. Jay Apt. The new 60 cm telescope, costing $360,000 can be remotely controlled by computer. Eventually, users will be able to dial in from their home computers, point the telescope at areas of interest, and download the resulting images via modem.

****

News briefs looks at communications news items that appear in the mainstream media and elsewhere. Thanks this week go to "The Australian", "The Sydney Morning Herald". and the internet "comp.risks" forum. If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office?

-- Richard Musnane VK2SKY

Dural Report

Here again is another report on activities at the Dural broadcast station.

A long-standing intermittent fault in the 2m repeater controller, which manifested itself in various ways such as random "resets" and apparent deafness (the micro-controller was actually "out to lunch" at the time), has finally been fixed. For the technically-inclined, the problem was a hardware watch-dog circuit triggering at random, and those with a Latin education will merely say "quis custodiet ipsos custodes?" ("who will guard the guards?"). Thank you Jeff VK2BYY for your persistence! Some minor calibration problems, present since early this year, still remain to be fixed.

A 2m SSB transceiver is being modified for broadcast service, to replace the 2m/6m unit that was written off. Should anyone have a 6m SSB crystal-locked transceiver surplus to requirements then be assured that a good home will be found for it here at Dural.

Work continues on the 6m repeater and the 10m FM outlet; both are starting to negotiate a paper-warfare maze.

Is there any interest in re-forming the Dural Committee, which was apparently disbanded last year? The upkeep and development of the Dural site is too much for one person, and a dedicated team ofvol-unteers with relevant skills is sought to take on this task.Beware -- those on the team will be put to work immediately! By the way, those who have previously volunteered have not been forgotten.

-- Dave VK2KFU, Dural Engineer

IPS WEEKLY REPORT

T 27 37 15 15 -21 7 38

SOLAR ACTIVITY WAS VERY LOW 21ST, AND 26TH-27TH OCTOBER, AND LOW 22ND-25TH.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET 21ST, INCREASING TO UNSETTLED TO ACTIVE ON 22ND. ON 23RD THE FIELD WAS AT ACTIVE TO MINOR STORM LEVELS, RETURNING TO UNSETTLED ON 24TH, QUIET ON 25TH, AND QUIET TO UNSETTLED 26TH-27TH OCTOBER.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES 21ST-24TH OCTOBER, THEN UP TO 20 PER CENT BELOW PREDICTED VALUES ON 25TH-26TH. ON 27TH THE FIELD WAS ENHANCED 15-30 PER CENT DURING LOCAL NIGHT.

FORECAST (28 OCTOBER - 03 NOVEMBER)

SOLAR: LOW

GEOMAGNETIC: ACTIVE TO MINOR STORM LEVELS ON 30 OCTOBER, UNSETTLED TO ACTIVE OTHERWISE.

IONOSPHERIC: NEAR NORMAL UNTIL 31 OCTOBER, 15 PER CENT DEPRESSIONS EXPECTED THEREAFTER.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

From the St. George Amateur Radio Society

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm next Wednesday evening the 2nd of November 1994.

The Society's guest speaker for this meeting will be David Peck VK2GIO. David will be giving an interesting talk and demonstration on Amateur Television. Members and interested visitors should not miss this opportunity to improve their knowledge of this emerging facet of our hobby.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from - Allan VK2XF Publicity Officer

Blue Mountains

The Blue Mountains Amateur Radio Club invites one and all to their Trash and Treasure Sale on Friday 4th November, 1994. This is a marvellous opportunity to buy some Trash or sell your Treasure.

The meeting starts at 8.00pm but the door is open from 7.30pm for vendors.

The Trash & Treasure Sale is preceded by a brief business meeting of the Club.

The venue is the usual club room at Springwood High School, Faulconbridge, corner of Grose Road & Chapman Parade. Enter from Chapman Parade.

All are welcome. Refreshments are served.

The big event in the Blue Mountains on Saturday 26th November, 1994 is the Computer & Communications Show.

There will be 15 different Trade displays, a large indoor Flea Market and an All Day Sausage Sizzle.

IF YOU WOULD LIKE TO BOOK SPACE IN THE FLEA MARKET PLEASE CALL ALEX, VK2KAS ON 047 57 3256.

DON'T MISS THE COMPUTER & COMMUNICATIONS SHOW!

B.M.A.R.C. Publicity Officer, Alex VK2KAS

Mid-South Coast

Next Saturday, 5th November, is the date for the quarterly social gathering and meeting of the Mid South Coast Club.

The site is the famous "H Ranch", on Little Forest Road, Milton and it offers spectacular ocean and mountain views from the eastern fringe of the Budawang Range. The Ranch is 10 km inland from the Princes Highway and the turn-off is 3km north of the township of Milton.

Visitors are particularly welcome - please bring your barbecue or lunch. The club will provide the tea, coffee, etc.

These are social gatherings with a minimum of business and an we have arranged for an interesting speaker. Club members look forward to welcoming you to the beautiful South Coast!

from Stan, VK2EL, Club Secretary

News from the Castle Hill Amateur Radio Club

The next meeting of the Castle Hill Amateur Radio Club will be held this Wednesday, 2nd November.

The lecturer for the night will be our esteemed President, Harry Tyreman, who will complete his lecture on antennae and Smith Charts.

Visitors are always welcome to our club functions. Meetings commnce at 8 p.m. and are held at Castle Hill Military Radio Museum.

For further details ring Ian O'Toole VK2ZIO on 680 2112.

From Ian O'Toole Publicity Officer

A.A.T.C.

The next general meeting of the A.A.T.C. Inc. is on the 2nd Sunday of the month at 1.00 pm at Chipping Norton -- more details later.

The technical lecture on the day will be announced closer to date as it will be a Christmas AATC members bar-b-que end of year function.

The Committee of the AATC wishes to thank all those who gave us time and assistance to our club in the staging of the television internet for the Scouts and Guides to be involved in a 'hands on' for the JOTA.

The A.A.T.C. also wishes to thank the Gladesville ATV group for its technical input at the sharp end, thus making the final product very professional. Watch ch35 for future info re AATC and ATV.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater any-time.

--AATC Publicity Officer Bob Barnes VJ2R

Gladesville

GLADESVILLE UHF VOICE REPEATER BACK ON AIR

THE GLADESVILLE AMATEUR RADIO CLUB REPORTS THAT THE 70CM CLUB REPEATER VK2RRS ON 438.475 MHZ HAS BEEN RETURNED TO SERVICE AT ITS TEST SITE IN LANE COVE WEST. SIGNAL REPORTS WILL BE WELCOMED AND WE REGRET THE INCONVENIENCE CAUSED BY ITS ABSENCE.

AND A REMINDER -- GLADESVILLE AMATEUR RADIO CLUB INC. CONDUCTS ATV TEST TRANSMISSIONS ON UHF CHANNEL 35 ON WEDNESDAY, FRIDAY AND

SUNDAY NIGHTS, COMMENCING WITH A TEST SCREEN AT 7.00PM ON WEDNESDAY, AND 6.30 PM ON FRIDAY AND SUNDAY. ALSO, ON WEDNESDAY AND SUNDAY, CONDITIONS PERMITTING, THE TEST TRANSMISSION APPEARS ON UHF CHANNEL 16 IN THE CENTRAL COAST, ON VK2RAG, VIA THE AUSTRALIAN AMATEUR TELEVISION CLUB'S REPEATER VK2RFM AT OAKDALE.

FROM PAT LEEPER VK2JPA CLUB SECRETARY

Summerland Amateur Radio Club

All members are reminded of the Special General Meeting to be held, in our club rooms, on Sunday 6th Nov. 1994, at 2pm.

Important changes are proposed to some of the by-laws, regarding Associate Membership and voting rights. Also it is planned to rationalise the membership fee structure for all grades of member-ship.

Please make every effort to be there and to voice your opinion on these matters.

For more information check the details on your October newsletter.

VK2GJ - Graeme - Publicity Officer

P.S. Don't forget our Computer Expo on the 26th November.

Bits, bauds, baubles and bangles

by Jim Piper, KD6YKL

Back in the days of yore (not mine, yore), when digital
communications meant interrupted continuous wave (CW), folks
measured transmission rates in worde per minute. Then came
Teletype and the favored -yardstick- for information
transmission rates became the baud (after French keyboard pio-
neer Emile Baudot).

As speed advanced to 300 baud, that measure of transmission
rate over a digital communications link (which can be a
telegraph wire or a radio path) served well. But technology
continued to press forward. As rates passed 1200 bits per
second (bps), 300 baud began to seem smallish.

Todays fibre-optic lines allow data rates as high as 2.5
gigabits per second (2,500,000,000 bps). Even our relatively
narrow UHF ham bands can easily carry data at 9,600 bps.

Most hams use baud to describe data rate regardless of the
transmission medium. Yet confusing baud and bps clouds the
discussion of data transmission rates. (Its a little like
asking what time it is when you want to know how much time is
left).

The problem with the indiscriminate use of the term baud stems from a misunderstanding of its meaning. According to Webster, the IEEE and the ARRL, a baud is - a unit of signalling speed equal to one discrete condition or event per second. In CW, a -discrete signalling condition- occurs each time a radio transmitter is keyed on or off.

How does this relate to baud/ If you key your transmitter at the rate of 5 words per minute and the average word length is six characters, and each character has an average of three dits and dahs, you are producing 180 symbols per minute (5 WPM x 6 x 6). You could say that you were transmitting CW at 6 baud because you are transmitting an average of 360 discrete conditions per minute, or 6 per second. Of course, we normally dont describe CW rates in baud, but in words per minute.

One often hears packet radio and voice frequency modms discussed in terms of baud. The actual rate at which data (i.e., dugutal information) flows depends on the ratio of bits per baud. Baud rate and bit rate are equal only at speeds of 300 baud and below, and obly for FSK modulation without parity bits. Other modulation schemes sudh as phase-sgift keying (PSK, BPSK, and QPSK), CLOVER, etc., stuff more bits into each baud. Thats why, for the sake of accuracy. I encourage you to use the much less confusing bits-per-second measure rather than the baud.

(Just kidding about the baubles and bangles).

Look at the source code to NOS (also referred to as KA9Q). Although
it is mostly for doing TCP/IP, it also supports AX.25 connections
(as well as NET/ROM and other goodies).

Just to clarify, you can use NOS to do AX.25 and source code is available.

Yes. I an a VE in our area and we had a guy in his 20's who had moved to
the USA the previous year.

Walked in, passed 20WPM took all exams Novice to Extra and nearly aced all
of them. We were amazed.

A friend is looking for a wholesale supplier of nylon tie-wraps - he particularly needs longer sizes (11" or more). Someone mentioned a company called Modular Devices which is supposedly somewhere in New York state, but they didn't have a city or phone number. I'm wondering if anyone could give me a lead to this company, or else another wholesale supplier of these tie wraps.

Please reply via e-mail if possible.

Thanks,

Jack

>Maybe the VE's just wanted him to come back so they could get another
>$5 or $6 for another testing session.
>
Have you ever run a VE team? I did so for 7 years at the U of MD, and
I can honestly tell you that of the $5.00 or so we used to charge, if
there were less that 10 people doing the exam, W5YI would get about $3.00
of the $5.00, and we'd have the other $2.00 to "spread around."

At a standard exam, we'd have maybe 6 examinees, and 3 or 4 VE's, meaning
I'd get a dozen donuts or bagels and cream cheese, and maybe a half-gallon
of OJ, so that's $5.00 for the bagels & CC, and maybe $1.75 for the OJ,
leaving $5.25 of the original $12.00 from the examinees.

Postage for the paperwork went about $1.75, leaving $3.50 to cover gas
money for the VE's. At 20 mpg, and $1.00/gallon, that's 70 miles TOTAL
for all involved.

Or roughly 23 miles round trip per person. I used to drive 25 each way to
do those tests at certain times. Only when I lived on campus was there a
surplus of a few bucks, which was spent the next time there was a shortfall.

Of course, if there were more than 10 people tested, there <<might>> have
been a little surplus. Thanks to whomever, last year I had to prepare a
statement of "where the money went," and give it to the FCC. After a year
of exams, the net "profit" if you want to call it that was about $1.00.

I need help! I am trying to build a multiband QRP rig. I would like to cover the following bands: 80,40,30,20,15,10. Or at the very least 80,40,15,10(novice bands.) I would like to try and get min 3w and max 5w per band. I would like it to operate on a 12-13.8 power source either battery or supply. By the way JUST CW. I figure it may be to hard to incorporate a SSB for now.

Questions:

#1 Anyone know of any plans for such a beast?
#2 Can I use the same dial to tune all the bands or will I need to incorporate many tuning knobs?

Scott

>Jeff NH6IL

Well, be careful. If Dale really wants UHF Low-split radios, then he really should try to get UHF Low-split radios. Reason being the helical resonator front ends in most commercial gear has a limited tuning range. Also, there are L/C components that are frequency sensitive, but these are often pretty easy to change; most Motorola service literature has charts of radio range versus component values. The helical resonators are much more difficult to change, though. I'll tune a radio out of range, as long as all the tuned circuits "peak", but a 450MHz radio is pretty unlikely to tune down to 430MHz. The more you dink with the radio, the more you relinquish one of the greatest assets of commercial gear; ruggedness :-).

$300 for a recond UHF Mitrek ain't bad in the commercial realm, but try calling John Lansdell, (909) 873-1319. His prices are extremely competitive especially to amateurs who are willing to test/repair the equipment. I bought a cherry Low-band Mitrek with control group for $50 from him. He's got a lot of good stuff, and it turns over quickly; call him every month and find out what the hot deal is currently.

Yeah, and I don't want to hear anybody calling it a British affectation, considering that most people in the US, confronted by the darkly obscure "kilometer", insist on pronouncing it in the British fashion: ki-LOHM-u-ter rather than the standard KEE-loh-mee-ter.

So what you are saying is that when I call 7P1AAA on CW, hoping to work
a new country, all I have to do is watch my wattmeter and verify that
I responded to his CQ, and I have a valid QSO?

What point are you attempting to make?

The ACK does not come from W1AW, it comes from the station W1AW
is in QSO with, includes W1AW's callsign plus the callsign of the
station W1AW is in QSO with. The ACK contains TWO callsigns.

Gary Coffman has hit it on the head. Let me add my $.02:

The intent of the packet message is not one way but is to solicit
a reply, just like a CQ, except that it is not real-time. Any packet
message not intended to solicit a reply, and that does not relate
solely to ham use is a broadcast and is not permitted.

For example a notice about the NY Cookie Eaters Assoc. meeting in
Mrs Fields restaurant on 6th Avenue is a broadcast and is NG since
it is not solely for ham use.

Notice about the Cookie Eaters Net on 40m is for ham use and is OK,
in my humble opinion. Also notice of the XYZ Amateur Radio Club
meeting in a restaurant on 6th avenue is also OK. This is similar
to W1AW one-way xmissions.

A message asking if there are any cookie nets on 40m or asking when
the next NY Cookie Eaters Assoc. meetings is is also ok since it
is soliciting a reply. This is like the start of any net, or a CQ,
or the "Are there any base stations to handle emergency traffic" call:
a one-way xmission soliciting a reply.

BTW: I too like cookies :-)

One of my repeaters I help with just got a bad case of intermodulation.
It appears that the repeater's own transmitter contributes to the problem
somewhat, as the reciver only hears it when the transmitter is keyed.

Didn't I read an intermodulation artical in a QST a few years back? Does
anyone have any good references or suggestions?

I'd like to substantiate everything that Scott has to say here. I took
my tech test with Scott and his crew at the Univ of MD. We had want
looked
to be about 13 at my session. Not only did Scott provide the goodies to
help calm everyone down and put them at ease so that they could
concentrate
on the information rather than the evironment, he had to make copies of
test answer forms, etc to handle the larger than average class size and
the greater numbers taking both the Novice portion and the Tech portion.
In addition, I got a certificate of completion and my results were
tracked by the group. All of which requires supplies and costs money. His

group also provided the FCC forms and did all the necessary logging and forwarding.

My immediate thought was that the $5.60 didn't handle all this. Most Universities charge $45 for application fees and do considerably less work processing them (I know I was the assistant to the president at a state college).

Rather than all these inuendos about the VE costs, we ought to thank the guys volunteering to carry out the testing and Paperwork necessary to make it work and apropos to make getting the license a much more pleasant activity.

Interesting story. A friend and I used our HT's for comm during a deer hunt the past weekend as well. (FT470 and FT530) We used UHF simplex when possible, and a local VHF repeater otherwise. Opening day, he used his to tell me his truck was broke down and to come get him.

I had recently built a TV twin lead Jpole also, which worked great making autopatches through a repeater about 90 miles away. Rubber ducks worked, but very scratchy. We even tried building a 6 element yagi to reach the autopatch from camp without success, at least so far. Had to climb a 200' mountain behind camp to work it with the smaller antennas.

Overall, it added some variety to the hunt.

1723. Motorola Syntors

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-01 18:30:23 UTC
From: zilmer@jingluo.dt.wdc.com
Message-ID: <zilmer.783714550@jingluo>
Source record: 257489

I have seen some interest here in Moto Syntors. These radios are and have been hitting the streets in the salvage market. I've bought several for UHF - these were Range II, 450-470 MHz - and put them into amateur service. As several comments indicated, they are quite rugged and built to last.

Early on with the Syntor, I gave in to solving the frequency and PL PROM puzzles. It took some finagling around, alot of trial and error, but finally the puzzle is solved. Seems to work for both VHF and UHF radios, but just the plain vanilla Syntor. Haven't finished reversing the Syntor X / 9000 family of PROMs yet.

I did a prototype freq control head on an Augat board, using an 8051, keyboard, LCD display and various TTL jellybeans. Right now, this proto head runs my 2m packet station. I'm giving serious thought to making a kit or perhaps finished control head available but just for the amateur 440 MHz and 144 Mhz bands. Not sure yet, but it might be worthwhile to offer out of band receive, though the Syntor's preselector bandwidth may prevent this from being very useful.

I started in on the Syntor X PROM format and encoding a month or so ago and expect to have (at least VHF) results by the end of the year. The X has a much wider front end on receive and is a complete makeover of the Syntor. For one thing, it uses a cheap microcontroller to do most everything, including PL encode.

I am just wondering how much, if any, interest there is out there for this sort of item. If so, please post here, or if you want privacy, email zilmer@dt.wdc.com.

>exam site, and he went from Tech + to Advanced in one leap -- passed the
>13 wpm, general, advanced, and even the extra exam. Couldn't quite handle
>the 20 wpm, however.

Way back when I was getting started, I managed to go from Novice to Advanced in one step (I *think* this (1976) was before Tech got its own written exam, though, so that was roughly the same step, I guess). I aced the 20WPM code test, but hadn't bothered studying for the Extra written since I hadn't believed that I'd ever get to 20WPM when I started studying in earnest for the Advanced. Oh, yeah, the other bit: I had had my Novice ticket only about 4 months when I took the Advanced.

(Of course, it then took 18 years to get around to actually taking the Extra, which I passed recently. Oh, I guess that means it's time for the obligatory FCC Delay Watch comment: it has been roughly 2,690,100 seconds since I passed the exam. :-)

1727. Computer Controlled Rigs.

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-01 19:47:32 UTC
From: rps@cray.com
Message-ID: <1994Nov1.134732.3907@walter.cray.com>
Source record: 257573

I am looking to upgrade to a computer controlled rig. Not knowing what's out there I'm seeking the net's wisdom. I have a shareware version of hyperlog that talks about a bunch of different that support computer interfacing.

Do all rigs let you change the frequency from the computer?
Are there any radios that are easier to hookup to than others?

I'm also looking for input on cw, memory keyers and rotator control software/hardware ....etc.... the whole 9 yards!

Thanks!
Russ

: >
: >Not true. While it is illegal to intentionally interfere with other
: >transmissions, there is no legal requirement to listen before transmiting.
: >If you disagree, then cite the regulation. (It doesn't exist.)

: I believe this is covered under 97.101(a) and (d) in that good amateur
: practice (mandated in (a)) involves listening before transmitting to
: avoid (d).

C'mon Gary!
Section 97.101 says nothing about listening before transmitting:

(a) In all respects not specifically covered by FCC Rules each amateur
station must be operated in accordance with good engineering and good
amateur practice.

(d) No amateur operator shall willfully or maliciously interfere with
or casue interference to any radio communication or signal.

W1AW has been using the same transmitting procedures since it was founded
in 1936, and ARRL station W1MK did the same thing for years before that.
Not to mention the many other bulletin/code practice stations over the
years that have transmitted on pre-announced fixed frequencies. There's a
long tradition that it qualifies as "good amateur practice."

: >Any licensed amateur may "broadcast" code practice or information bulletins:
: >
[FCC regulation cited]
: >
: >You may be thinking of the special regulations that affect paid operators:
: >
[FCC regulation cited]

: Actually, I was thinking of *both* of the above quoted sections.
: Both were lobbied for by ARRL to support W1AW operations, though
: of course they had to be worded so that all amateur stations meeting
: the requirements are elegible.

OK, here's the history:

W1AW was in operation long before those regulations were adopted.
It used to be that there was no regulation against paying someone to
to operate an amateur station. While it was illegal to receive
compensation for the use of a _station_, there was no regulation
against receiving compensation for operating someone else's station.

Then, back in the mid 70's, the FCC "clarified" the rules to also make
it illegal to pay an operator, which made W1AW illegal. So FCC had to
issue a temporary exemption for W1AW while they "clarified" the
clarification which resulted in rules similar to what we have today.

: I have a Garmin GPS receiver which I would like to interface with my PC.

: Does anyone have any info on the NMEA 0183 protocol referenced in the
: manual? Or is there a more appropriate SIG where I might pose this question?

You can contact the National Marine Electronics Assn (NMEA) at:

PO Box 50040
Mobile, AL 36605
(205) 473-1793

The NMEA 0183 standard is actually quite readable. It's roughly 75 pages
long and costs something like $25 or $35 as I recall.

I am posting this for a friend of mine whose call is WA2CTZ.
He is having trouble installing Pacomm. Anyone out there that can help
him he will pay you for your time. He is located in Washington Heights,
Nerw York City and his telephone number is 212-942-7693. His name is
Ronald Marx. It would be best that you talk with him directly but if for
some reason you would rather contact me W2OQK you may by Email Thank you

1732. "QSO" practice files for supermorse

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-01 20:13:34 UTC
From: vinod@watson.ibm.com
Message-ID: <3967he$18tk@watnews1.watson.ibm.com>
Source record: 257449

Does anyone have sample QSO files they have typed in
for use with SuperMorse? The format for the default is
pretty rigid, so I would like to have a bigger sample
set to practice with. (It does not even have to be QSO's,
it is just that the average random text file has too
many special characters like @ signs, parenthesis etc..so
any files that you have found reasonable for practice would
be most helpful..) Many thanks in advance.

(And yes, I will try not to _think_ while copying the
code, that seems to be my major problem :-)

From: dbushong@wang.com
Message-ID: <CyLvG2.Grn@wang.com>
Source record: 257480

ham@wam.umd.edu (Scott Richard Rosenfeld) writes:

>At a standard exam, we'd have maybe 6 examinees, and 3 or 4 VE's, meaning
>I'd get a dozen donuts or bagels and cream cheese, and maybe a half-gallon
>of OJ, so that's $5.00 for the bagels & CC, and maybe $1.75 for the OJ,
>leaving $5.25 of the original $12.00 from the examinees.

Are you saying that some of the exam fee went to paying for refreshments?

97.527 Reimbursement for expenses.
[...]
(d) Each VE and each VEC accepting reimbursement must maintain
records of out-of-pocket expenses and reimbursements for each
examination session. Written certifications must be filed with the FCC
each year that all expenses for the period from January 1 to December
31 of the preceding year for which reimbursement was obtained were
necessarily and prudently incurred.

Talk about interpretation of the rules!

[[EXAMNT11.01 : 3933 in EXAMNT11.01]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
this amount of time, or less.

The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
this amount of time, or less.

The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75. The 1995 test fee is $5.90.

: Amsat-Oscar 13 reaches altitudes in excess of 27,000 miles at apogee.
: Two-way contacts are possible between any two points on earth depending on the
: orbit/schedule of the satellite at the time. LA to Israel is a pretty
: easy hop. No CW required - but "true Techs" only please; appliance operators
: need not apply :-)

Looks like it will be possible next January 2nd.

Interestingly, the "typical footprint" on page 74 of the Satellite
Anthology shows that a LAX to Israel hop is possible
with the satellite over the Baltic sea.

BTW, Los Angeles stations please use use LAX instead
of LA in this weekend's CW Sweepstakes--less confusion
with Lousianna section. Rules on p. 125 of the October QST.

True. But it's time we replaced it with a more up-to-date screen (ie. a typing test). When you think about it though, shouldn't the written elements be of sufficient difficulty to keep out the "losers".

>The no-codes should be very happy with what they have..and screaming for
^^^^^^^^You mean "Technician-class Amateurs"

>more will just inflame many of the dedicated HF opeartors who don't want
>to see their band go to hell.

You need to listen to the HF phone bands more often! The bands (and ham radio, one might argue) went to hell quite a while ago judging from the number of extras, advanced and generals (mostly extras for some reason) who currently pollute the bands. Witness the "piss and moan" thread further down the menu.

On an related note, has anyone ever studied the effect that the Public Domain Q&A pools has had on the hobby? We've had, what? 10 years of experience with them? Seems to me it cheapens the whole hobby.

1743. Farnsworth question

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-01 22:21:26 UTC
From: byon@quicksilver.COM
Message-ID: <199411012224.OAA05955@netcomsv.netcom.com>
Source record: 257507

Farnsworth question

Sending "PARIS " involves the sending of 10 dits, 4 dahs, 9 spaces bewteen marks in a character, 4 spaces between characters, and 1 space between words. At 1 unit of time for a dit, 2 for a dah, 1 for spaces between marks in a charater, 3 for spaces between characters, and 7 for spaces between words, this amounts for 50 units of time per "word". Therefore, for an exactly "5 words per minute" Morse Code transmission, there should be 250 of these time units per minute, so each time unit, or the length of each dit, is 240 ms. And a 13 wpm message has 650 time units per minute, or 92.3 ms per dit.

Does a Fransworth speed of 13 wpm when giving a 5 wpm code test mean that the dits, dahs, and spaces between marks inside a character are set as if the test was a perfect 13 wpm test, and the other two spaces are set as if it were a 5 wpm test? Or, should the timing of the between letter spaces and the between word spaces be set as if giving a 2.5 wpm test such that the overall speed is 5 wpm?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 NOVEMBER AND FORECAST FOR 02 NOVEMBER - 04 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 92/37

GOES satellite data for 31 Oct
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Nov 03 Nov 04 Nov
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Nov: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 31 Oct
Learmonth 15 3334 3323
Fredericksburg 16 32
Planetary 21 38

Observed Kp for 31 Oct: 4356 6443
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Nov 22 Unsettled to active
03 Nov 20 Unsettled to active
04 Nov 15 Unsettled
COMMENT: IPS Geomagnetic Warning 8 was issued on 27 October and is
current for interval 27 October to 4 November.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
01 Nov normal fair poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Nov normal normal-fair fair-poor
03 Nov normal normal-fair fair-poor
04 Nov normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
01 Nov 10 15-20% depressed until 13UT, near normal thereafter.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 Nov 10 Near predicted monthly values/depressed 15 to 20%
03 Nov 10 Near predicted monthly values/depressed 15 to 20%
04 Nov 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 9 was issued on 27 October and
is current for interval 27 October to 4 November. No data available
00-06UT at Sydney yesterday.Frequencies were near predicted values at
Townsville yesterday.

I'm sorry you choose to reject AMSAT's best advice (it's not my
analysis, the work was done by brighter and more capable people
than me).

>Gary's analysis makes sense if you are interested maximizing the
>time you can work MIR, as opposed to just working them once.

AMSAT's analysis makes sense if you want to maximize your chances
of working MIR, or SAREX, or any other body in LEO, *at all*.
Direct overhead passes are rare, and MIR's operation schedule in
particular is currently erratic. Using an antenna system that
favors the majority of time you'll be in the footprint will
maximize your chance of working them *once*.

>Advantages of the MIR overhead:
> Minimum path loss--shortest distance, fewer obstructions
> Good possibility of low background noise

Neither of these are of much concern at 145.55 MHz. The signals
are quite strong, even near the horizon, if the antenna used
doesn't place a null there. Background noise, aside from local
manmade noise, simply doesn't enter into the picture. This is
not extreme weak signal work.

> If you are in Hawaii or someplace similar
> the competition is out of range.

This is true, but has little to do with the type of antenna
used. Competition is a concern in the continental US or over
Europe, but competition ism't much of an issue in Hawaii or
Singapore (as is the case here). There will be relatively
few competing stations in the footprint since it will be
mostly over empty ocean, or over areas with low amateur

populations.

And an antenna optimized solely for the overhead pass does *not* reduce interference from competition. Unless they too are using strictly overhead optimized antennas, they can be anywhere in the footprint and still put a good signal up to the satellite. You will only be able to put a good signal up at one time at one point. So using an antenna optimized solely for the overhead pass will reduce your competitive chance of getting a signal in edgewise.

> Minimal doppler

In point of fact, doppler is changing most rapidly during the overhead portion of the pass as range and bearing from your station are changing most rapidly. Doppler changes are much less during the lower inclination parts of the pass.

Gary

I sure dunno the "TRUE ORIGIN" of the shave-and-a-haircut tappey tap tap
but know my dad used it sometimes on the door and saw the same done in
movies during the 1960's. Back in the early 1970's when I was still very
active in CW, many many QSO's ENDED with the 1st op sending (. ... .)
and the other op sending the last 2 dits to complete the jingle. I'm
much too new to ham radio (only active since 1970 to present with an
ill-fated 1 year stint as a Novice in 1963) to have been around when the
QSO's used the exchange as a form of CQ.

A friend of mine, Dave Wolf, WB4VCQ, who had not had a terrible amount of experience in radio mod/repair, successfully added the CHIPSWITCH upgrade to his HR2600 and is very happy with it. It DOES take some care and watchfulness to avoid damaging things when making this or any other mod or repair to a radio.
Dave recently moved to Austin TX at (U. of Texas???) and no doubt can be reached via internet email but I haven't heard from him since he moved so do not know his email address for you to pulse him with a query.

Heh, just as we suspected. :-)

Seriously now, is there a correlation between the ability to use proper spelling and grammar and Morse Code copy? I seem to note a distinct lack of same from some of the best Code people. Or is that just happenstance as well?

I doubt there is a correlation, inverse or otherwise, in regards to intelligence between those who do Morse and those who don't. However, I do think there are some inborn differences in the way their brains are wired, and that it's not just a matter of effort dividing those who can do it fluently from those who cannot. I suspect that manual Morse is like an athletic skill. Some people have a large degree of natural talent and respond well to only minimal training, others are doomed to be duffers no matter how much they practice.

I'm definitely interested in information on reprogramming the EPROM, and I would be interested in an agile controller as well, though the latter is not as high a priority.

In addition, when the bird is close to being directly overhead, it is also as close as it is going to get, i.e. minimal path loss, so you don't need as much gain. So as Gary suggests, an antenna with a closer to the horizon pattern where you need the gain is a better bet.

Well, from the frozen north here (Michigan), can't help there. 6-landers?

> 2) Where can I get the code practice software? My friend has
> it but only for the mac.

Simple solution: get a Mac. This is written from a PowerMac 7100, which snacks on Pentiums. (Donning asbestos suit, awaiting flames from DOS-weenies ;-)

>
> 3) What's W1AW? .... I realize it is a call sign but for what?

For the ARRL's station in Connecticut. They broadcast code practice sessions, among other things. I recommend that over the computer method, personally. The real live on-air article is better practice. The computer program will get you past the test, but the real world...

> 4) What is an electronic keyer with side paddles?

Hard to explain, easy to grasp once you see one. Bearing in mind I'm a straight-key retro-grouch on CW despite my use of PacTOR and spread-spectrum microwave: it's a gizmo with a pair of keys oriented flats-vertical rather than horizontal like a straight key, and when you hit one it does a dit and the other does a dah. The fast CW ops all use them, or send by computer. You'll also hear it called an iambic keyer. A "bug" is semi-automatic: one side does dits, the other is on for as long as you hold it, rather than an automatic dah as in a full keyer. You work a keyer with your thumb on one side and index finger on the other, using the side of your first knuckle on the finger not the tip.

Gary, couldn't agree more! Not to indulge in false modesty, you can probably see by my sig line I am not lacking in IQ. However, I had to work like a DOG to get 13 wpm! Practice, practice, practice... And after busting my wooden ears for three months to get the code, I visited with my uncle who was a CW op in the Army in the early '60s. He can STILL do 30 wpm while CARRYING ON A CONVERSATION WITH ME AT THE SAME TIME!!! Ack! And he never bothered to get his ham ticket. -Lee KF8MO

>>proper spelling and grammar and Morse Code copy? I seem to note
>>a distinct lack of same from some of the best Code people. Or is
>>that just happenstance as well?

This is pretty funny. In the days when I used to read and contribute to rec.radio.amateur.policy, the correlation went the other way. The two biggest anti-code complainers on that group had the worst spelling I have seen in any Internet group. It was hard to take their posts seriously when they could barely write English. I could easily believe that people with dyslexia might have more trouble copying code, but I don't think the people I'm referring to are dyslexic, I think they just couldn't be bothered to learn how to spell and write, any more than they could be bothered to learn Morse code. Those who proudly proclaim their NRA membership and those who make inflammatory homophobic postings also tend to have poor spelling and grammar - I think it would be too inflammatory on my part to suggest why this is. Readers are invited to collect their own statistics. The person to whose post Gary responded is not a native American, so it's unfair to include him in the statistics.

For the record, I am unbelievably intelligent, not a member of the NRA, not homophobic, spell almost perfectly, can copy code well and I'm much more modest than Gary Coffman. Ha!

-- [Logic needs license disk after DOS upgrade/different EMS/mouse etc]
-
-I was under the impression that Dennis had resolved most of the licensing
-problems regarding repeated license disk insertions, etc.

Maybe in Logic 4.01. I am running straight Logic 4, but Logic 3 has the
same misfeature.

-One thing I find
-strange though, is that if you needed to insert this disk so often, how did
-you misplace it? I generally find it much more difficult to locate things
-I don't use very often versus things I use often.

Easy. The regular Logic disks were in the disk file. Disks that are often
used usually end up on top of the computer, and then behind the computer, and
then under the computer, and then... :-) You know how ham shacks are.

My complaints ar ethe stupid copy protection scheme, and the fact that his
first (and only) assumption is that I, having already paid $150 for the
software and upgrades, am asking for a replacement license disk to steal
a copy, rather than I want to use what I have purchased.

Now, I have useless software, no logbook, and I am out quite a bit of
money. Does anyone have any info on how to bypass the copy protection
so I can continue to use my software?

: --

While that is undoubtably true, I'd wager that it isn't as difficult for so many as you might think. There are surely many factors involved in the difficulty some people have with learning Morse which have nothing to do with lacking "natural talent". Certainly there are many who, upon having difficulty, presume that they are one of those "natural talent deficient" people and either give up or develop a nasty mental block. And while you may be completely honorable and well meaning in your opposition to code testing, I'm also fairly certain that a lot of people joining you on the no-code bandwagon are amoung the "something for nothing" group. That isn't an attack upon you, your motives, or code-free Techs, it's just a "social observation". When faced with adversity, a good excuse is always handy to absolve one of personal responsibility.

Not if its for the Ham Community and posted in an open forum for most
Hams to see.

:I thought that the
: FCC rules stated that "nobody owns a frequency", and that no transmissions
: should be made before checking that the frequency was in use?

You are right, but you can be ASSIGNED a frequency by the FCC that
you may have primary user status (ie. your local AM station) nobody may
interfere with your broadcasts. As to there being law or rule about
stepping on someone's QSO, it may be bad manners but not against the
rules. Actually, I think I remember on my Tech exam there was a question
about who should move off a certain frequency the answer went a little
bit like this "The party for which is the least inconvenienced must move
off the frequency"
Following this logic, the people who are being stepped on by an automatic
transmission should by rights move, because more people are looking for
that signal at that certain time but the QSO'ers can change freq and not
be bothered by the automatic transmission.

I hope this helps...

Who says? There are many many different ham groups or clubs that have a central "theme" or commonality. Many of these clubs or interest groups have skeds or nets on the air. Are you saying that >nobody< should be allowed to have any clubs or nets on the air that have a particular theme or interest in the discussions?

> Amateur radio
> is NOT meant to promote anything of the sort. If you want to

Other that the minor tendencies of some "christian" hams, I have never heard anyone "promoting" any particular "lifestyle" on the air, be it model railroading, flying, old-age aches and pains, or sexuality. Nor have I heard gay hams discuss SEX itself on the air.

> but using the Amateur radio service as a platform
> for promoting your sick lifestyle is just not proper.

I think we now see the true reason you object to the existence of a gay ham radio club.

>

I have seen numerous people learn code from scratch and pass the 20wpm test with less that 3 weeks practice/learning.

On the other hand, there are hams such as myself that have been trying for over ten >years< to get the speed up to general level with no luck (due to a mild form of dyslexia).

>I< tend to get riled up when "higher-class" hams look down at us lowely techs with such distain. MOST extras I know don't do that, and in fact are against the 13 and 20wpm >requirements< for testing. But I run into the "pro-code" factions more than enough to give extras a bad name in my book.

"I (we) had to pass 20wpm so you have to"
"It is a filter to keep the CBers out"
"It is a tradition"

Bullshit. Pure and simple.

IMHO, morse code requirements for testing beyond 5wpm is unjustified. Period. It does not provide any proof that a particular individual is "entitled" to operate on HF frequencies any more than passing 5wpm does. It does not keep the riff-raff off the hf bands (witness all the crap from extras there!). As a tradition, it is decades passed. Spark transmitters are a tradition, why not use them today?

I am sick to death of being called a "whiner" or "complainer" when I ask for a LOGICAL explanation why I am not allowed to use VOICE on HF simply because I cannot get my (receiving) code speed up to par???

BTW, even tho I cannot receive code faster than about 9wpm, I can >send< code at about 25wpm; the only problem I have with it is attempting to read the text to send as I have trouble "connecting" the printed character with the code to send from time to time. I have been this way for about 10 years now, and despite all the years of practice, it does not look like this will change for me.

It has been suggested here that I attempt to find a VE that will allow me to take the 20wpm test by >sending<. I am tring that currently..

Learning code does not have very much to do with IQ, whatever that is. CW is a kind of craftmanship and that makes it a very special and enjoyable part of this hobby!
That is perhaps why some of the CW bashers are so frustrated, they have to practice to learn code, can't just study it in literature.

Message-ID: <19941102115002CSMSCST@MVS.OAC.UCLA.EDU>
Source record: 257387

I'm always surprized when I hear people discussing Farnsworth spaced CW as though it is only useful at low speeds. The other evening on 30m, I heard someone sending at about 23 wpm with characters at what I'd guess to be 40-45 wpm. Although it sounded quite strange at first, it was amazingly easy to copy - far easier than a straight 23 wpm would have been.

We might have more people passing 20 wpm and fewer gripes about how difficult it was if we used Farnsworth-spaced code in VE sessions. I'd do it in our tests, but that's not the part of the sessions I'm responsible for.

> xtals or more complicated than just an xtal?
>
> Jeff NH6IL

Hi Jeff, just wondering if you have a phone number and location for Tele-Path.
I have a source in CA, but unfortunatey, shipping a Mocom 70 across the country
by UPS will cost more than the radio! I am in PA.

And, at least for the VHF Mocoms, you really don't NEED channel elements, for
typical indoor, temperature controlled environments. Just order the xtals from
Jan, and insert them into the element sockets. Mocom elements only consist of a
xtal and a thermistor for temp comp. This is unlike a Micor's, which contain the
entire TCXO.

Moving the preselector around to get into the ham bands can be a #^%! though.

Byon...

Your question on telegraphy speed is interesting - and
difficult to answer straightforward. Actually, telegraphy speed at
best can only be approximate. Regular plain English (PL) telegraphy
keying spaced is usually based on the 50 unit word PARIS. Only one
letter (P) is relatively long.
Random code (so called "Code Groups" CG) sent on the basis of
the word PARIS actually seems about 15% faster since CG's contain
substantially more of the longer characters ...Q, Y, Z, X - plus
numbers, punctuation ..prosigns. (Some telegraphy enthusiasts believe
"dit speed" rather than the word PARIS should be the used as the speed
criteria. We use PARIS here.)
When Samuel Morse ingeniously devised his code, he referred to
a printer's type face box and counted the number of times each letter
was in the box. Thus "E" became "dit", "T" = "dah," etc. The English
language contains more vowels (all short) plus letters like N, S, R...
Random CG (such as the 20 wpm CG we administer to applicants
for the First Class Radiotelegraph) actually appears to be 23 wpm if
you use PARIS spacing. This is why everyone has trouble copying
random code. You can't read it (fill in) ...and the "dit rate" is
necessarily faster (if you use PARIS spacing!) While PL is generally
considered to be 50 units long, CG is about 60. Computer keying
programs do not compensate for the language difference ...such as when
CG are transmitted. In fairness, a 20 wpm CG telegraphy exam should
be slowed down to 17 or 18 wpm if the word PARIS determines the keying
speed.
Farnsworth spacing simply lengthens (pauses) the spaces
between characters and words. The bottom line to all of this, Byon,
is that telegraphy speed is an inexact science and all you can hope to
do is come close. (We always lean in favor of the examinee.)
We try to transmit our 5 and 13 wpm, code tests at 15 wpm
(which is closer to what the FCC used) when they administered the
tests. (See June 22, 1982 Public Notice entitled "Specifications Used
by FCC for Amateur Radio Morse Code Test Tapes." The FCC did NOT use
Farnsworth spacing at 13 and 20 wpm ...and timed their 5 wpm (Novice
Element 1A) at 13 wpm.
We use 15 wpm for 5 and 13 (and the 20 wpm is not Farnsworth
spaced.) The ARRL uses 18 which indeed does facilitate the attainment
of higher speed proficiency, but (in our opinion) is harder for
newcomers. We think the 15 wpm is an acceptable compromise between
the FCC's (previous) spacing and that of the ARRL. Again, this is all
"conjecture." Frankly, I have given up trying to figure out code
speed.

Hi Michael, I can't resolve your irritation, but, if as you state, you are out big bucks and an entire log book etc, I don't understand why the two or three dollars it might cost to take care of the problem is not worth it. I have made a few calls to Dennis in the past and found him to be VERY helpful. In fact I found a problem with my Logic4Windows after calling him, he sent me two new floppies with the fix. That is what I call service. If you have a problem you can fax him and he replies at his cost via fax or phone. I don't believe he is trying to screw anyone. Having tried many different types of logging software, I have to say this is the best by far (for my purposes which is general logging/mostly dxing/some contesting.

You might switch due to your problem/irritation, but you won't find a better software or support.........73 de Bill

We teach a class for the No-Code Technician at our Store, and four months ago a gentlemen by the name of Steve Griggs came in as a walk in for testing and took Novice, Tech, General, Advanced and Extra written and the 20 wpm code and passed then all with flying colors. He missed one question on the advanced and two on the Extra, passed the code both ways, with straight copy and all questions correct. His call is now AC6CF.
I only remember only one other case, and that was in l977 in Long Beach when I was taking my Advanced that some one did the same thing, it sure impressed those of us who were there, gave us a lot to talk about after the test sesstion

Byon Garrabrant (byon@quicksilver.COM) wrote:
: Farnsworth question
[snip]
: Does a Fransworth speed of 13 wpm when giving a 5 wpm code test
: mean that the dits, dahs, and spaces between marks inside a character
: are set as if the test was a perfect 13 wpm test, and the other two
: spaces are set as if it were a 5 wpm test? Or, should the timing of
: the between letter spaces and the between word spaces be set as if
: giving a 2.5 wpm test such that the overall speed is 5 wpm?

The additional delay is added between the characters and the words. The delays between the elements of a character are at the character sending rate. In other words, for 5/13 Farnsworth, the delay between each dot/dash within the character is (1.2 seconds)/13 = 92.3 milliseconds. (That's also the length of each dot and 1/3 the length of each dash.) The delay between characters is 1.443 seconds, and the delay between words is 3.367 seconds. (These values are chosen to maintain the 7/3 ratio of word space to character space.) If you add all of that up for the 31 dot/dash/element-space times, the 4 intercharacter times and the one word-space time in "PARIS " you'll get a total of 12 seconds--a 5 wpm rate.

If you want the complete equations, see my article, "A Standard for Morse Timing Using the Farnsworth Technique," April, 1990 QEX. (For copies of QEX articles, contact lweinberg@arrl.org.)

From: dale.piedfort@pcappbbs.com
Message-ID: <9411030400094124@pcappbbs.com>
Source record: 257302

I have two power supplies they are:
1. Astron RS-35M (35 amp supply with meters) (11 years old)
25 amp constant with 35 amp surge
2. Astron RS-35A (35 amp supply with no metets) (5 years old)
25 amp constant with 35 amp surge

I have owned Astron Supplies since the late 70's and find them to be of the highest quality, My first Astron was recommended to me by another Ham.

I recommend Astron Supplies to everyone who comes into the store looking for a good performing High Quality Supply.

Astron backs their supplies extremely well, and I have only heard of a few failing in the first year. Most of the time for those of us who live in SoCal and are close to Astron have taken them over to the Service center and had them repaired while we wait.

Astron is a Company who prides themselves on their product and stands behind them 100%...

I doubt if I would ever own anything else......

In closing we have a very large linked repeater system and we use the Astron 50 and 60 amp supplies on, we have never had a power supply failure on a single on, one of the supplies is on a 6000 ft site and the other on a 8500 ft site and the temp at times is brutal yet they have never failed. At both of these sites the buildings are not heated.... ASTRON IS # 1 in our book.

A while back, I flamed Ten Tec about their vaporware kits. While I am still waiting for the 2M transciever, the 2M amp kit showed up about three weeks after I ordered it. Now that I have actually built one of their kits, I would like to point out the quality of the kit and instructions.

The kit is a complete 2M amp 5Win -> 30Wout, and can be wired for either class AB or class C operation by changing two jumpers. It runs on 12 (13.8) volts and pulls 4-5 amps at full power. A nice two-hour kit (for an experienced kit builder). I would just recommend two changes - add a power switch, and add a jumper from the mounting screw of the SO-239 to the ground plane of the board. It worked the first time, and tuneup was a breeze, just needing a milliameter, wattmeter, dummy load, and a diddlestick (plus the radio and supply, of course).

I have also purchased the Ramsey kit (I am evaluating them for the Boston ARC's next kit-building workshop), and the Ten Tec is by far the better kit.

(Quote from the Ramsey manual: "Cut off a 1-inch piece [of the supplied magnet wire] and form it as shown around the handle of a tool" - A tool? Eyeglass screwdriver? Sledgehammer??? :-)

I've heard of using a TV *tuner* as a spectrum analyzer -- you'd use a voltage-tuned job, preferably cable-ready (so it wouldn't have a gap between 88 and 174 MHz), with the AGC line fed a fixed bias and the output fed into a narrow IF and detector at about 46 MHz. Feed a voltage sweep into the control line and sync the scope to it, and you get a spectral display.

1793. Ham stores in London ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-02 17:19:25 UTC

Message-ID: <AATeyjkOg7@kamiso.vladimir.su>
Source record: 257428

Hi,
Can anyone let us know where can we find the hamradio related places in
London ? Our friend will be there from the 10th of November and we'd like
to prepare some information for him. We are looking for:
- ham radio magazines;
- catalogues of firms delivering radio rigs and homebrew kits;
(our preferable interest is packet radio)
- ham stores to buy;
and just
- radio amateurs to talk.

Thank you very much.
Dmitry.

Well Steve, folks have been pointing out the error in your
understanding for some time now, but you appear to ignore
what they say. The digital BBS system does not use broadcasting,
all traffic is sent between two stations in QSO, and the
third party rules have been relaxed (starting with 85-105)
by the FCC to permit exactly the type of operation you claim
is "illegal". It is clear to anyone who has followed the
evolution of the digital BBS system (or to anyone willing
to LISTEN to those of us who have followed that evolution)
that the FCC has changed the rules in response to the desires
of the majority of the ham population.

Your claims of "illegal" operation are simply bogus.

Beating this dead horse does nothing to move ham radio
forward, but simply sows dissension and confusion.

Please read part 97, think about how the digital BBS network
actually works, and then contribute something positive to
the discussion. Basing your arguments on errors in understanding
of part 97 does nobody any good.

... Hank

I don't think it screens the losers at all. Some of the worst manered
people in the HAM world are extras, advanced, and generals. I have
witnessed this many-a time out here in the Seattle area on certain
repeaters (some of you know what I mean). Many of the newbies such as
myself don't want to upset people so we try hard to keep our QSO's short
and to the point, and do our best not to step on anyone. The crapy mannered
people will butt in with very little to add, make a call immediatly after
someone else did, make a call before the QSO is done.... (I could go on)

Therefore, those who think that no-codes on HF would ruin the bands are
missing one point--the pissheads are already there. This is not a direct
flame, only observations from VHF/UHF land.

BTW I have noticed some NCT that are this way so I am not saying NCT's
are perfect, only that it is every where.

The VHF/UHF bands probably have more stuff to do then I could ever hope
to get involved in. If I chose not to learn code I would not have a hard
time finding something to spend my money on. I am currently working on
my 5wpm at 20wpm formation. I want to get my general so that I have
access to everything HAM radio has to offer, not just the upper bands.
However, if I chose to stay up there then so be it! To get into
satellite operation you need to read up and learn all about them, same
way for HF. CW is an integral part of world wide operation. You can't
just through an antenna on your roof and expect to do satellite
operations effectively. I view CW the same way.

Sure seems sad, after THIS accomplishment, to tell him to "... come back next time ...". I know folks have to get up to go to work, but I'd have been inclined to stick around and let him earn Extra (or at least try).

: Gary's analysis makes sense if you are interested maximizing the
: time you can work MIR, as opposed to just working them once.
:
Sorry, Zack, but I have to agree with Gary. In my experience working RS-10 over the past few years, a simple vertical antenna works best. I use a home-brew 5/8 J-pole most of the time, with 10-30 watts. On really bad passes (close to the horizon) I switch over to a 5 element beam aimed at the horizon. In the 50+ contacts made, I've experienced a high angle dropout once or twice, when the satellite was *right* overhead (89.something degrees). Those happen very rarely, and the dropout lasted less than a minute.

The problem with working satellites is that they're like the proverbial potato chips - once you've worked them you're hooked! The best advice is to get a setup which will maximize longer term enjoyment of this aspect of the hobby.

Now, for the original question - I believe I read in SpaceNews that MIR has had some power supply problems recently. There was a statement that one of the inhabitants was only on the air occasionally over Europe, which I extrapolate to there not being any ham activity over the rest of the planet. Your antenna and radio may be working just fine, but it takes two for a QSO. Be patient; they'll get things working again on their end. In the mean time, you might try some of the other Low Earth Orbit satellites - RS-10 or AO-27 would be good candidates (for phone; I'm not up on packet sats yet).

1798. Cloning the TM-732A - Thoughts ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-02 18:40:26 UTC
From: clmorgan@mumr2.mid.muohio.edu
Message-ID: <1994Nov2.134026.1@mumr2.mid.muohio.edu>
Source record: 257436

Some time back, I inquired about cloning of the TM-732A transceivers. Many of you responded, for which I am thankful, with excellent guidance and information.

Finally, I got around to implimenting the function. To enable over-the-air cloning, I had to "cut the green wire", thereby modifing the transceiver to a "K2" model (originally a "K1").

The cloning now works. However, new issues have arisen and I'm hopeful that there's insight on the NET that will be shared.

1. Cloning does not occur for the "call channel" or the DTMF memory. All other functions, including "DT" and "Page" do occur.

2. According to the modification information, this mod should have increased the UHF TX range to 420-470MHz; mine will RX 410-470 but TX only 438-450.

3. Also, acccording to the modification information, the VHF TX would increase to 152MHz. After modification, my RX is 118-174 and TX 144-148.

The lack of TX outside the ham bands is not a problem. I would like, though, to be able to get below 438MHz on the UHF band.

The real question is "What is going on?". Do I have the correct modification information? Or is there something in error there? Anyone else do this and are willing to share your results?

Looking forward to input.

I went in for my exams about a year or so ago, determined to regain the General license that I'd let expire in 1982. I was fully prepared to pass the 13 wpm and the three theory exams, but I managed to pass the 20 on the first go, to my great surprise (I went through those multiple choice questions in about 15 seconds and just about fell off my chair when the VE nodded and smiled at me after grading it). I then proceeded to get only one question wrong on the 3 theory tests, and the VEs were really urging me to go on and take the last 2, but I wimped out since I hadn't even started to look over that theory (and had nasty memories of failing 4 Advanced tests in 1978). So I went back 2 months later and aced the Advanced and Extra exams. Part of me wishes I'd studied and gone for the whole shebang in one go, but on the other hand there are still times when I feel like a novice, and having a novice question and an Extra class callsign can be embarrassing.

My desire to tell this story has overcome my modesty, alas. ;)

I echo your sentiment about the support, I've had excellent help from
Dennis with some odd problems on my system ...

However, I also find the key disk an irritant ... I run Logic 4 DOS under
Desqview, and the smallest change on my system causes the irritable
"insert license disk" ... with all the hundred's of dollars worth of
software on my system, this is the only one that is copyprotected in any
format, and the only one the I find I have constantly put the key disk in
for.

Otherwise, I've been very very happy with it as a logging program.

>What, specifically, did the ARRL do to ensure the continued existence
>of Amateur Radio in Spain? Sweden? or Canada for that matter?

>Don't confuse your *opinions* with actual history.

By becoming an effective lobbying agency for amateur radio in
the United States and developing a good rapport with the necessary
U.S. Government agencies (initially the Commerce Dept., then the
Federal Radio Commission, then the FCC), and by organizing an effective
system of trunk lines for message handling nationwide as well as
publicizing and encouraging amateur assistance to public agencies
and the public at large during natural disasters and emergencies,
ARRL succeeded in creating an "image" of amateur radio in the minds
of U.S. Government officials as "a good thing." This was particularly
true during WWI when ARRL assisted in actually recruiting radio
operators for the war effort. As a result, every U.S. delegation
to every international conference on radio spectrum use went in
predisposed to protect the right of amateurs to exist; in fact,
prominent amateurs were always invited to participate as part of the
U.S. delegation.

For better or for worse, it is during this century that the
U.S. has risen to a position of relative preeminence in world
politics, although perhaps this is becoming less true today. As
a result, the U.S. has been in a position to "swing a certain
amount of weight" at international conferences, and thus to
propose and ultimately have accepted certain positions, including
the protection of amateur radio frequency allocations. Thus,
other ntions have "gone along" with *some* U.S. proposals (but
not without a *lot* of "back-room politicking). However, I
hasten to point out that securing the survival of ham radio
has not been without considerable struggle in some countries by
their own amateur populations; in fact, there re still many
countries which do not *really* enjoy the "freedom" of all citizens
to participate in this activity.

So, I think the point is not that the U.S. or the ARRL ever *actively* lobbied in someone else's country to "protect" or "encourage" amateur radio, other than by providing moral support for groups in those respective countries trying to do that; but rather that had the ARRL or a like organization not existed in the U.S., there would have been no particularly strong support *in the U.S. Government* for the position of the amateur, and the U.S. delegations to the conferences would not have deemed it of value to lobby (often against considerable odds) for amateur radio at all. I happen to hold the view (shared by many) that without a strong U.S. lobby at those early conferences, amateur radio might have gone out of existence as early as the early '20s.

Incidentally, the book "200 Meters and Down" by Clinton B. DeSoto, describes in quite detailed fashion the behind-the-scenes lobbying that went on at the international conferences, and early on it was basically the U.S., Canada, and some of the British Empire countries which stood against most of the rest of the world in trying to secure and protect frequency allocations for amateurs.

Wanted UK REPEATER LISTING IN ASCII FORMAT (For Psion S3a program)

** Posted to Usenet by Email, please reply to **
** csljohns@cix.compulink.co.uk **

Many thanks for reading this. I am looking for a reasonably
up-to-date repeater listing for 2M and 70CM for the UK. I have
one in hard copy, but am reluctant to type it into the PC since
I am sure such listings exist. It is to act as a datafile in
a mapping program that is being written for a handheld computer.

I need the listing to include as a minimum

) 2 letter call
) channel number R or RB
) location (nearest town) or any other referece point

In addition

) OS grid ref or Lat/Long or LOCator (approx)
) CTCSS number

If anyone can supply this (perhaps as email, via packet or I can post a
disk+pp could they email me.

(I dont get this newsgroup so apologies if I'm miles of topic)

(NB if anyone who might be interested in a UK repeater listing in
zoomable map format on the Psion Series3a could also let me know
I will contact the author and hopefully encourage him further in
writing the overlay!! He's a good chap 'dont ya kno'- mind you
it would be shareware N.B. I have no financial or other interests
in the project - this is not a commercial!)

1811. Experiences w/ Ameritron AL-811H

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-02 23:55:05 UTC
From: milewski@oregon.uoregon.edu
Message-ID: <milewski-0211941657510001@darkstar.uoregon.edu>
Source record: 257452

Does anyone have any personal experiences with the Ameritiron 811 series amps? In particular I'm interested in the 811H.

A friend of mine mentioned that he's been hearing some not complimentary reports from users.

Thanks,
Steve
milewski@oregon.uoregon.edu

1812. More thoughts on improving CW speed

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-02 23:58:57 UTC
From: dmunroe@vcd.hp.com
Message-ID: <Cynzy9.7tJ@vcd.hp.com>
Source record: 257453

One idea that occurred to me for improving speed is to concentrate not on getting everything, but instead just a certain subset of characters. Let's suppose you're listening to a fast QSO - just relax and, every time you hear an "a" (for example), write it down. This will condition you to listen for just that sound and respond appropriately whenever you hear it. By ignoring everything else, the pressure of "trying to copy everything" goes away. Next, add more letters to the repertoire to which you're responding (like all the vowels) and keep building up from there. I think I'm going to try this and see how it works. We have a 2m repeater around here that id's in CW at about 20wpm and I can't get the full id. In my mind, I do play back the tail end of the call and get "/R". So I've tuned myself to listen for this "/R" and I never fail to get it, I just need to be able to respond to the other characters.

I have a code practice oscillator. Now I know why the VE's usually don't test for sending code: it's a whole lot easier to send fast than to receive! Just for kicks, I sent a paragraph from the FCC rulebook, at what I thought was a speed I'd like to receive at. I taped it while I sent, and then played it back. Interesting results: I need to concentrate more on forming dots and dashes and I also need to slow down -- it's too easy to send faster than you can receive.

Does anyone tape their CW QSO's or is that illegal? At the very least it would let you recover information that you may have missed.

I've worked with a lot of people trying to help them overcome the
Code barrier. Most all of them could make 5 WPM one way or another,
some quickly, some after a long struggle, except for one fellow.
He's a bright engineer, but simply cannot keep the letters straight.
I showed him every trick I know, as did others, but none worked. He
certainly has tried hard enough, over a 10 year period. Fortunately
there's now the code test free Tech license and he's finally a ham,
but he's still banished from HF operations. That's a real shame too
because he has a lot to contribute.

At the higher speeds, many more people have severe difficulties.
Some people can pick up 13 WPM in 2 or 3 weeks, others still don't
get it after months or years of practice. It took me 13 months of
at least an hour of practice, and after the Novice arrived an additional
two hours on air operating, a day from the time I passed 5 WPM until I
passed 13 WPM back in 1964. There are some tricks that work for a lot
of people at 13 WPM that will let them squeak by, but they don't work
for everybody. I suspect that most of the Novices who fell by the
wayside before that became a renewable license are in that group,
as are a lot of the old coded Techs. I know one fellow, a coded Tech,
who went out and bought a brand new Collins rig as an incentive to
upgrade. He practiced for *years* so he could use that radio, but to
date he hasn't made 13WPM yet. He can finally use the (now old) Collins
rig on 10 meter voice though.

20 WPM, I've been licensed 31 years now, and used to be heavily involved with traffic nets. I used Morse *every* day passing traffic, but my personal best speed is still stuck at 18 WPM for error free copy. I probably could pass the current 20 WPM exam with that, but I won't do it. I've decided that's one charade I don't have to participate in. Yet I know others who easily speed along at 40+ WPM with error free copy, and it didn't take years of practice for them to get there. I'm sure that there are natural talents involved.

Now I don't begrudge other people their talents. I'll never play basketball like Michael Jordon, nor will I ever golf like Arnold Palmer. But I can play basketball and golf without having to pass a government test showing I'm as good as those fellows. I do know the rules of the games, and I do replace my divots. And I can play billards and shoot competitive pistol where I'll bet I'm *better* than either of those guys. Different people have different talents to contribute. If I thought rapid Morse code skills were *essential* to the safe and legal use of HF, I'd say, "Well I can't be an amateur operator so I'll go do something else." But I don't believe that's true anymore (if it ever was), and so I'll continue to try to get that arbitrary barrier removed.

>And while you may be completely honorable and
>well meaning in your opposition to code testing, I'm also fairly
>certain that a lot of people joining you on the no-code bandwagon are
>amoung the "something for nothing" group. That isn't an attack upon
>you, your motives, or code-free Techs, it's just a "social
>observation". When faced with adversity, a good excuse is always
>handy to absolve one of personal responsibility.

I don't doubt that there are *some* people who fall in that category. Perhaps even a lot of people. That doesn't bother me at all. They don't matter as far as I'm concerned. I'm simply interested in removing an irrelevant and arbitrary government barrier to access to spectrum where modes other than Manual Morse are allowed. I don't buy into the idea that effort for effort's sake is a relevant requirement for an amateur license. I believe testing should only be used to establish competence to safely and legally use the amateur spectrum. Beyond that point, the government's interest ends. It's up to individual amateurs to get out of amateur radio what they are willing to put into it. I see it as a lifelong learning experience, done for the enjoyment of learning, and not for some piece of government wallpaper. For those whose main goal is collecting wallpaper, the ARRL has plenty of it.

>"dit speed" rather than the word PARIS should be the used as the speed
>criteria. We use PARIS here.)

I'm not a code enthusiast, but I'm interested due to all the hassle and pain it's caused. In my *opinion* (worth what you paid for it), the dit is the basic timing unit of the Code, so all other relevant measures should be based upon it. Words per minute is a somewhat arbitrary measurement because real words are of arbitrary length and made up of arbitrary combinations of letters. Since testing is defined in terms of WPM, however, it makes sense to set an exact standard for a testing word. I'd suggest 50 dit units be considered a testing word, whether it corresponds with any particular actual plain text word or not. IE for the purpose of *testing*, words should be counted as groups of 50 dit lengths, not by counting actual words of plain text, or random five letter groups.

That was no doubt difficult in the past, so the PARIS nonsense was brought in, but today it's relatively effortless to do by computer for preparing tests to be scored strictly according to dit units. Perhaps it's time to lobby for a more rational definition of a testing word. This would eliminate the difference between plain text scoring and code group scoring.

> We try to transmit our 5 and 13 wpm, code tests at 15 wpm
>(which is closer to what the FCC used) when they administered the

>the FCC's (previous) spacing and that of the ARRL. Again, this is all
>"conjecture." Frankly, I have given up trying to figure out code
>speed.

I'd suggest that Farnsworth spacing isn't "real" Morse Code, and that
testing should be based on standard dit length spacing for the speed
to be tested. Otherwise you aren't testing for Morse Code proficiency
at a given speed. Rather you are testing for Farnsworth Code proficiency,
and that's not an international or national requirement. If we must
have Morse testing, we should at least use the Morse Code.

1817. Help with HTX-202 needed please

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 01:54:07 UTC
From: tomsunman@aol.com
Message-ID: <399frv$76n@newsbf01.news.aol.com>
Source record: 257457

I'm waiting for my tech license to arrive and I'm playing with my new HTX-202. The manual says to clear all memory turn OFF the transceiver and press F + CLR then turn on the transciever. I did this and nothing cleared! Everything I put in was STILL there.
Also, When attempting to store a calling frequency I press CA and 146.000 keeps coming up on the display. I can't seem to store the frequency I want in the memory. The freq I want to store doesn't require a subaudible tone.

I also noticed that when I activate the power save mode nothing seems to happen. Any help or advice much appreciated!

Oh, one more question. What does listen on the input mean? I hear this once in awhile. "I'll listen on the input". Like someone is checking there signal or something. I know repeaters use an input and output frequency so I imagine that has something to do with it.

I don't think you have a chance in hell of finding a VE group who
will do that. Your best legal recourse is to get a medical waiver.
However, there may be methods you haven't tried yet that will allow
you to pass the receiving test. Dyslexia, like stuttering, is a
cerebrum function centered in Broca's area of the brain. It does
not affect automatic functions centered in the cerebellum. So I'd
suggest you attempt conditioned reflex copy. That bypasses the
conscious centers where you have difficulties. It still might not
work for you, but it's worth a shot if you want that Extra wallpaper
badly enough.

1824. Periodic Announcement - ARRL Email Information Server (info@arrl.org)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 04:00:02 UTC
From: mtracy@arrl.org
Message-ID: <rec.radio.info-arrl.email.info_783835201@ve6mgs.ampr.ab.ca>
Source record: 257298
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.info

Periodic Announcement - ARRL Email Information Server (info@arrl.org)

The services that the ARRL provides via the internet include the
Email Information Server and the Technical Information Service.
The Information Server is an automated mail server that gives you
access to many of information files relating to various facets of
Amateur Radio. You can retrieve any or all of these files by
sending an email message to info@arrl.org here at ARRL HQ.
Each file you request is then mailed to you automatically.

To use it, mail messages to:

info@arrl.org

Each line of the message body should contain a command as shown below.
The subject of your message is not processed and may be omitted. You
may place as many commands in a message as you want. The files you
request will be sent to you in separate messages. Only ASCII text
files are supported.

Valid INFO commands:

reply <address> (may be needed - see below for explanation)
help
index
send FILENAME (example: send prospect.txt)
quit

In the above message example, "help" retrieves a brief set of
instructions for info, "index" retrieves a list of available files
and "send prospect.txt" retrieves a text file containing information
on becoming a radio amateur.

Note to users with FTP capability: All of these files are also
available by anonymous ftp to oak.oakland.edu in the
pub/hamradio/arrl/infoserver area. Retrieve the file index.txt
in the /league sub-directory for a complete listing of available
files.

If you want to retrieve several text files with one message, use a
separate line for each "send filename" request.

Your From: field or Reply-to: field in your header should contain a
valid Internet address, including full domain name. If your From:
field does not contain a valid Internet address, the answer will not
reach you. If this is the case, then use the reply command as shown

above. When needed, this command should always be the first command in your message.

IMPORTANT: Please use the quit command in your message. This will prevent processing errors from message signatures.

PLEASE NOTE!: This is an automated system not capable of handling written requests. Any questions on the info-server or the content of any of its files should be directed to mtracy@arrl.org.

ALSO NOTE!: Do *NOT* reply to messages sent from info@arrl.org - the reply address is redirected to keep bounced messages from endlessly looping. Write a new message to info@arrl.org instead.

The Technical Information Service gives League members on the internet better access to the knowledgeable technical staff here at ARRL HQ. Questions relating to Amateur Radio and related technical topics are welcome. To use this service, send a normal e-mail message to tis@arrl.org with your question spelled out in plain english. For best service, be as specific as possible and keep your line length in messages to a maximum of 80 characters. Due to personnel limitations, priority will be given to questions from League members.

Best Regards,

Michael Tracy, KC1SX, ARRL Technical Information Services Coordinator
(e-mail mtracy@arrl.org)

Sample of files available from INFO: (There are lots more!)

Note - If you are not yet an Amateur Radio operator retrieve the file prospect (send prospect) for information on how to easily get started in this fun hobby.

Asterisk indicates predicted value.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under
class M flares.
However, times of fade-outs are shown only for flares with an energy greater

than X-ray class M3.

DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
19 Oct 1 2047-2201 UT

2.1 Comments on Solar Activity.

Solar activity was moderate on 19 October with an M3.2/1F at 2127 UT.
Very low to low activity was observed at other times. A C4.7/0F flare
was observed at 1009 UT on 25 October. This flare is mentioned as
it is believed to be associated with a coronal mass ejection (CME) and
proton enhancement, which was unusual considering the size of the event.
The 10cm flux showed an overall rise in values, beginning the month at 75
and finishing the month at 97.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

2-7 October Field increased to major storm levels during local
night on 3 October. Minor storm levels were observed
during local night during the interval 5-7 October.
Disturbance was associated with a coronal hole.

11 October Disturbance observed in northern hemisphere, mostly
unsettled at Learmonth.

22-23 October Sudden impulse observed in the field at 1215 UT on 22
October. Minor storm periods observed during local
night on 23 October. Disturbance was associated with
flare/CME and a coronal hole.

29-31 October Major storm levels observed during local night on 29
October. Active to minor storm levels observed
30 October, and during local night on 31 October.
Disturbance was associated with flare/CME and a
coronal hole.

3.1 Comments on Geomagnetic Activity.

Several disturbances were observed during the month of October. The highest
A index for the month was 47 observed on 3 October.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
DATE MUFs

3 October MUFs were depressed 30% during local night.

4-8 October MUFs were depressed 20-30%, during the interval 4-7 October,
recovering slowly on the 8th.

11-13 October MUFs were depressed 20%, during the interval 11-12 October.
MUFs recovered during local night on 13 October.

25-26 October MUFs were 15-20% depressed all day on 25 October, recovering
on 26 October.

30-31 October MUFs were 15-30% depressed during this interval.

4.1 Comments on Ionospheric Conditions.

Propagation conditions during the month of October were degraded by frequent
ionospheric disturbances.

There is a Custom Forum here on Delphi called Motorola Comunications.
It is custom forum # 345. Includes all sorts of Motorola related
communications, including hams who use Motorola equipment.
I peronally use a UHF Gp-300.

> >$5 or $6 for another testing session.
> >

I have been a VE in Eugene, OR for about 3 years. I commute over 60 miles round trip to work the sessions and have never received anything... I repeat... anything from the fees charged.

Every cent of the fees we receive goes back into the VE effort. For example, with the small portion of the fee that stays with the local VE team, we bought a mixer with individual headsets and volume controls for CW tests, etc.

In the last year and a half we changed our policy of administering same day re-tests so that it is no longer allowed. Not because we wanted to get more money out of an applicant but because the mountains of paperwork and time expended were less efficiently handled with same day retesting.

1829. MOSLEY PRO-67B ANTENNA?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 06:34:36 UTC
From: daniel.swift@chrysalis.ORG
Message-ID: <9411022234.0VPSD04@chrysalis.org>
Source record: 257412

This previous weekend for the CQWW Phone Contest, I used the Mosley PRO-67B Beam Antenna at a friend's shack. I was *very* disappointed with this antenna's performance, specifically it's F/B ratio. The antenna acted like a rotating vertical rather than the expensive beam antenna that it is. E.G. While rotating the beam and listening to a distant station, it seemed that the DX station signal remained the same, regardless of where the beam was pointing.

This antenna was assembled according to Mosley instructions. The SWR is pretty good for this antenna, less than 2.0:1 on all frequencies and bands. Before I do anything drastic, Does anyone out there on the net have any experience with this antenna?

Please respond either here or directly to my address below. Any opinions as to how best to proceed would be *sincerely* appreciated.

Thanks!

Dan Swift, N5UPG

>cleared! Everything I put in was STILL there.

Press and *hold* the buttons while turning the radio on. About 2 seconds
after power is applied, the memories should be gone. Then you can release
the buttons.

> I also noticed that when I activate the power save mode nothing seems
>to happen. Any help or advice much appreciated!

Well, that's the idea. It powers down when nothing is happening, taking
a peek at the frequency every once in a while to see if there's any
activity it should wake up for.

> Oh, one more question. What does listen on the input mean? I hear this
>once in awhile. "I'll listen on the input". Like someone is checking there
>signal or something. I know repeaters use an input and output frequency so
>I imagine that has something to do with it.

Yeah, people listen on the input to see if they are close enough to
go simplex and leave the repeater free for others. (Note: move to
a simplex frequency, don't just start chatting simplex on the repeater
input frequency. That'll torque everyone off.)

Hi Jonathan,
I saw your posting about Dick Smith Electronics.
I own and operate an electronics store in Merced, Ca.
I used to sell D.S. parts and kits when I first opened, but
after about a year, Dick Smith closed their California outlet.
I always wondered what happened to them.
Would you please post me a catalog?

Thanks, Rick McMillion

Evan, Motorola doesn't make "Ham" gear, they make commercial two way radio gear among other things. Some of their radio gear happens to also cover the ham bands. I own a Motorola GP-300 UHF portable that I use mostly on the ham bands. It covers 438-470 Mhz. Works great!

1834. Review: JPS NIR-10 DSP Unit (Long)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 08:17:03 UTC
From: gkd@wpi.WPI.EDU
Message-ID: <39a69v$e9@bigboote.WPI.EDU>
Source record: 257470
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

The following review of the JPS NIR-10 DSP unit is an updated version of one which I originally posted in the spring of 1993. The review evaluates the NIR-10 for use in voice modes only and is written from an SWL/utilities monitoring perspective. (Hams who operate SSB should also find it relevant.)

The text of the original review is unchanged; all of the new material has been added at the end. The update reflects JPS's most recent NIR-10 software release, in which a dynamic peaking function was added to the unit.

WARNING: This review is _very_ long and detailed. I first started writing it for someone who was thinking about purchasing a DSP and was looking for much specific information, and it sort of evolved into a full-fledged review. With all the renewed interest on the net in DSP products, I figured it was worth re-posting. Any comments may be sent to gkd@wpi.edu

****

It was about five years ago when I first seriously thought about getting an active filter to use with my ICOM R71A HF receiver. I was doing lots of listening in the HF spectrum to Shortwave Broadcasts, Utilities stations, and hams; and had been impressed by how much more pleasant a friend's Datong active audio filter made his receiver sound. But living in a densely populated residential area, I was also facing the growing problem of wideband noise generated by an ever increasing number of computers, electronic appliances, power lines, etc. in the neighborhood. The usefulness of traditional audio filters was limited in combatting this type of problem, but the newer Digital Signal Processing (DSP) devices sounded promising. I'd seen advertisements for the JPS NIR-10 DSP audio filter, and after reading some favorable reviews, decided to investigate it. (I'd also looked into the W9GR DSP construction project which was in QST last year, but after getting feedback on both, decided that the JPS would be better suited to my needs.)

I wrote to JPS for information on the NIR-10, and also asked about the company's background and product line. Since it was only about a year ago that I first heard of JPS, I was curious as to how well established it was.

A very professional looking packet of information promptly arrived, which detailed an advanced line of DSP products; mostly oriented toward commercial communications systems. These products included Noise Reduction units, phone patches, bidirectional audio repeaters, voice modulation recognizers, switch matrices, and audio distribution products. An enclosed letter from Tom Jacks, JPS Vice President of Marketing, read in part:

"...I have enclosed a data package showing JPS Communications' present product line. Our two Amateur/SWL products, the NIR-10 and the NF-60, are included. We expect to have at least two more DSP-based products for the Amateur/SWL market released in the next few months. As you can see...JPS' primary thrust is into the Commercial/Paramilitary market. Our RTU-200 Radio/Telephone Interface Unit (phone patch) is currently being private labelled or sold to virtually every US manufacturer of HF Communications equipment. It is standard equipment in the White House Communications Agency. Why so popular? It is the only automatic phone patch in the world that works reliably on inferior telephone lines as well as good ones...

"Our NRU-500 Noise Reduction Unit is used in numerous communications centers to quiet noisy receiver audio and reduce fatigue on the operators. It is also used by law enforcement agencies...to clean up noisy surveillance tapes. The NIR-10 is a 'little brother' of the NRU-500 and is the result of many requests by agency personnel to have equipment for their ham shacks that would have similar performance to what they had on the job.

"JPS Communications, Inc. was founded in 1988 by three engineers who had many years of experience in the design of HF communications equipment for such companies as Harris RF Communications, Sunair Electronics and ITT Mackay Communications. Since it's inception, JPS has doubled its sales every year and this year looks like it will continue that trend. We currently have 25 employees, including an engineering staff of seven."

Pretty impressive...and a lot more information than I ever expected to receive. I called JPS and spoke with Mr. Jacks. He was most helpful and enthusiastic in answering my questions. A couple of days later, I ordered the NIR-10 from JPS. It was shipped that day.

Unpacking the NIR-10, my first impression was that it was a very well-constructed looking device. The controls had a quality "feel" to them, and there seemed to be much attention paid to detail. Moving across the front panel from left to right, there is a toggle switch for power, a green LED power indicator, a three-position mode toggle switch (noise/interference reduction or 'NIR' mode, bandpass mode, and bypass mode), a three position bandwidth selector toggle switch for use in the bandpass mode (when in NIR or bypass mode, this switch is used to turn on the automatic notch filter [or the rev. 3.0 "peak" mode, discussed at the end of this review]), a potentiometer to adjust the NIR level when in NIR mode or shift the passband when in bandpass mode, a red "peak' led used to adjust input volume, an output volume control, and a headphone jack.

The back panel has phono jacks for input and output audio and for remote bypassing. The latter is for hams who wish to use the NIR-10 but still be able to monitor their own transmitted signal. The jack can be wired to the transceiver's PTT line to force the NIR-10 into bypass mode when the microphone is keyed. (Audio passing through the NIR when it is not in bypass mode is delayed 130 milliseconds, which would make it difficult to

monitor one's own signal.) There is also a ground connection and a coaxial power connector on the rear panel. The power connector is a standard size, although the inner pin diameter is 2.5 mm as opposed to the more common 2.1 mm ID connectors found on other ham and SWL equipment. I purchased the optional 12 VDC 1 Amp power adapter for the NIR, although it can operate from any properly regulated 11-15 VDC 1 Amp power source. The power connector is reverse polarity protected, and all other inputs are protected to +/- 50 Volts.

The NIR-10 has three main operating modes; the NIR (noise/interference reduction mode), the bandpass mode, and the automatic notch filter (NF) mode. [Plus the rev. 3.0 "peak" mode, discussed at the end of this review.] The NIR and NF modes can be operated either independently or in conjunction with each other, while the bandpass mode can only be operated by itself. The NIR mode is the primary reason I bought the unit. It samples the input audio looking for speech content, and attenuates everything else. The multiple automatic notch filter is used to remove one or more heterodynes automatically as soon as they appear. The bandpass mode provides three vertically skirted audio passband widths which can be shifted up or down in frequency. The DSP operation may also be bypassed, allowing audio to simply pass through the NIR's audio input & output circuits.

When the NIR-10 is powered down, the input audio is bypassed directly to the speaker/headphone outputs via a relay. This should not be confused with the bypass switch on the front panel, which still routes the audio through the NIR-10's audio circuits while bypassing the DSP function. I found that the audio passing through the NIR-10 while powered up in the "bypass" mode was considerably narrower in fidelity than the audio which my ICOM delivered to the speaker when the NIR-10 was powered off. The difference wasn't very significant in the SSB mode, but when listening to AM broadcasters a lot of fidelity was lost. For this reason, it would be nice if the NIR-10 had a function to completely bypass it's circuitry without powering it off. (The unit must go through a brief diagnostic sequence every time it is powered on.) Since the necessary relay already exists within the unit, the addition of a switch is all that would have been required. (Of course, an external audio bypass can also be constructed.)

The NIR-10's audio bandwidth is obviously optimized for single sideband communications rather than high fidelity applications. (The specifications give it a frequency response of 300 Hz to 3200 Hz, +/- 2 db.) Anyone considering using it for Shortwave or Mediumwave broadcast listening should be aware of its restricted audio fidelity. Compared to the audio coming directly out of my ICOM R71A (which is mediocre for broadcast listening to begin with), the NIR-10 produced a "punchier," cleaner sounding voice; but one with it's dynamic qualities stripped. It made broadcast voices sound something like SSB transmissions. Whether this is an important consideration or not depends to an extent on individual preference and listening habits, and to an extent on the audio characteristics of the receiver being used. Sitting quietly in front of the radio listening to a clean, local signal, I preferred the sound of the ICOM's own output. But I

found that if I was moving around doing other things while listening, or if there was other noise in the room, the NIR-10's audio often made it easier to hear what was being said with the volume set at a lower level.

After noting the audio characteristics of the NIR-10, I engaged the NIR function while listening to speech on a local broadcast station. Increasing the NIR level adjust, the speech began to take on a "mechanized" sound as if it were coming to you in "packets" rather than as a continuum. (It almost reminded me of the way WWV sounds now, or of those "digitized" marine information broadcasts.) On a strong, clean signal, one would have no reason to use the NIR function. I tuned to a talk show on a weak broadcast station with considerable hiss on the signal. Turning up the NIR level produced the same "mechanized" sound, but also quieted the speaker between voice "packets." The hiss and noise on the signal was almost completely gone! The tradeoff, though, was a less natural sounding voice.

This mechanized sound takes a little getting used to. I sat in front of the radio turning on and off the NIR function trying to decide which way the audio was easier to understand, and found that comprehension with the NIR was not any better than without it. I soon learned that this was not the way to evaluate the NIR-10. The manual makes an important distinction between intelligibility and "listenability" which is worth mentioning here:

"Noisy speech is speech that has been corrupted by some type of noise...Speech which has been corrupted by noise has irretrievably lost some of its original characteristics. Complete removal of all noise...may sometimes result in speech which is harder to listen to and interpret than the same speech with some particular noise components retained. There is a trade-off between intelligibility (can one determine what is being said?) and `listenability' (how pleasing...or grating...is the monitored audio?). Maximum noise component removal may turn an irritating, noisy...signal into one that's much more pleasing to the ear, but the received speech must be understood as well. The aim of noise reduction in speech is to improve not only the listenability of the noisy speech, but to improve its intelligibility as well... Fatigue may result when an operator attempts to interpret noisy speech for extended periods. There are times when intelligibility is more important than pleasantness of the signal, while at other times emphasis is placed on listenability."

With that in mind, I tuned in my noisy talk show and went about other business while I listened without the NIR engaged. After a while I engaged the NIR and continued to listen. I quickly found listening with the NIR to be much less tiring than without it. It didn't take long to get used to the mechanized aspect of the voice, which was much easier to deal with than the noise.

The optimum amount of noise reduction can always be precisely set using the continuously adjustable NIR level control. On stronger signals, the control can be advanced to the point where all noise components virtually disappear. On signals which are down "in the mud," the control must be reduced to

prevent the desired speech from being chopped up. The proper operation of this control is very important if one is to realize maximum benefit from the NIR function, but adjusting it is not difficult with a little practice.

I found that when listening to noise-free shortwave broadcasts with good audio characteristics (such as the VOA), I would shut off the NIR-10 altogether and listen to the radio's audio directly. But in practice, the majority of shortwave broadcasts did not fall into this category. Most had some noise component (or just had poor audio to begin with), and these often sounded better using the NIR function. Program jingles and musical content would be lost if the NIR level was set high enough, since the NIR software interprets music as noise and tries to remove it.

Very weak, noisy signals are another story. I tuned in both SSB transmissions and AM broadcast signals which were barely audible and challenging to understand. The NIR-10's performance on these was mixed. In some cases, the NIR was able to remove enough of the noise to make an uncopyable signal copyable. In other cases, the NIR only made a bad situation worse and cut up the signal I was trying to hear. The manual acknowledges the NIR-10's limitations:

"...it is impossible to completely recover speech when heavily corrupted by noise...Because of this, use of the NIR mode at signal-to-noise ratios of 0 db and below may actually reduce intelligibility rather than enhance it."

I found that in most cases of heavily corrupted signals, the NIR didn't significantly improve intelligibility (there were notable exceptions though). It did a much better job improving the listenability of signals which were already intelligible. I tried punching in 5598.0 KHz USB, which is one of the North Atlantic Air Traffic Control frequencies. Most of the signals were well above the noise floor and easily copyable, but there was still a noticeable amount of noise on the signals and during the long pauses between transmissions. The NIR-10's NIR function quelled the band noise, turning it into a rhythm of low level digital "bleeps" above which the voices projected loud and clear. Monitoring the frequency became much less tiring, although I would occasionally have to reduce the NIR level to accommodate a particularly weak signal. This test was perhaps the most dramatic demonstration of the NIR's effectiveness, and one which applies to the ham bands as well.

Like the mechanized sound of the voice, the digitized "bleeping" which replaces the band noise takes some getting used to as well. Once I became accustomed to it, I usually found it much less annoying than the original band noise; primarily because it was at a much lower level. (A friend described this sound as somewhat resembling polar flutter.) The manual does make mention of the characteristics of this noise:

"...the noise left over after reduction has an "electronic" sound. This is not an artifact introduced by processing as one might think, but rather it is all that remains of the original input noise, which, because of its random nature, cannot be removed

completely. Unfortunately, this residual noise has also been de-randomized to some extent, so it occurs in bursts, Thus, it sounds unnatural and can be more annoying than white noise. The higher the level of noise in the input, the higher the level of this residual at the output."

The NIR mode does a good job removing hiss, impulse static, electric line noise, computer noise, and buzzing noises. It is not effective on static crashes, which burst through as a sharp report. The static crashes are sometimes more noticeable than without the NIR because the rest of the band noise has been reduced so much, but they also don't seem to linger as much.

The NIR mode is also not effective on adjacent channel SSB/AM interference, but this can be removed using the bandpass function. The near-vertical skirts of the bandpass mode really need to be experienced to be appreciated. Take a strong heterodyne signal and slowly adjust the bandpass shift. All of a sudden the signal will just "pop" into oblivion. The manual does note that strong signals right near the bandpass edge will cause a clicking sound in the audio; which is the digital equivalent of "ringing" in analog filters.

JPS markets two versions of the NIR. The ham version has 250 Hz, 600 Hz, and 1.8 KHz bandwidths in the bandpass mode, and the SWL version has 1.8 KHz, 2.4 KHz and 3.0 KHz bandwidths. (Other combinations are available at additional cost.) I ordered the SWL version since I was mainly interested in voice. While the 1.8 KHz and 2.4 KHz bandwidths are well chosen, the 3.0 KHz bandwidth is about as wide as the NIR-10's audio in the bypass mode. I can't find much of a use for it, and would have rather seen one of the narrower non-voice bandwidths (probably 600 Hz) included instead.

According to the manual, the bandpass function is intended mainly for digital and data signals (RTTY, packet, SSTV, etc.), which the NIR function tends to interpret as noise. In practice, I usually prefer the NIR function over the bandpass function when listening to voice signals. If there is any adjacent channel interference on SSB transmissions, I'll try combatting it with the ICOM's passband tuning control first.

This brings up an important point: Don't expect the NIR-10 to take the place of all the advanced features on your receiver. I still find myself using the rig's bandwidth filter options, passband tuning, IF notch filter, RF gain, and noise blanker controls just as much as ever. (The same goes for the low-pass/high-pass filters on the Kenwood SP-940 speaker which I use with the receiver.) They perform the same functions as always; the NIR-10 gives you additional power.

For example, adjacent channel interference in SSB may be attenuated by either the rig's passband tuning circuit or by the bandpass mode on the NIR-10. Using the receiver's passband tuning control has the advantage of removing the interference within the AGC loop. On the other hand, it's skirts aren't as steep as the vertically skirted bandpass filters in the NIR-10. An effective compromise is to use the passband tuning to get rid of enough of the interference so that it no longer drives the AGC, and use the

bandpass tuning on the NIR to remove the rest of it.

For a second example, consider the NIR-10's automatic notch filter. This filter attacks and removes most heterodynes before you even know they exist; and it can handle multiple heterodynes too (although it's effectiveness deteriorates if it tries to do too many at once). This is vastly superior to the manual, finiky IF notch filter on the ICOM, but there are times when it is preferable to use the ICOM's notch filter. A particularly strong heterodyne will affect the receiver's AGC circuit. The IF notch filter will get rid of it within the AGC loop and solve this problem. I've also found that the NIR-10's notch filter sometimes doesn't act on very weak heterodynes, which the ICOM's IF notch filter has no trouble removing.

LEFTOVERS:

I didn't evaluate the NIR-10 on CW and data modes. On CW, the manual states that the NIR function can be used at speeds above about 7 WPM. The manual also shows how the NIR-10 can be used for transmit audio processing with proper interfacing.

The audio input level is a snap to adjust using the receiver's volume control and the red "peak" LED on the front of the NIR-10 as a guide. (The output level is controlled using the volume control on the NIR-10.) An internal jumper is used to select high or low input levels. Connecting the NIR-10 to my ICOM's speaker jack, I find I have to drive the ICOM's audio amplifier harder than I'd like to when the jumper is in the high position. Moving the jumper to the low position makes the input too sensitive for the ICOM speaker jack. I may eventually try piggybacking a resistor into the level-select circuit to make the high level position a bit more sensitive.

The audio output amplifier can handle short or open circuits without damage. There is no record output jack on the NIR-10. When copying certain signals, it would be helpful to be able to toggle between the bandpass and NIR modes. This can be done, except that the same control is used to adjust the NIR level and the bandpass range. It must be readjusted every time the mode is switched. Separate controls for these two functions would have been a nice "frill."

A major concern I expressed when considering whether to get the NIR-10 was the extent to which it radiated RFI. My wire receiving antennas connect directly to the ICOM, so the NIR would in essence be sitting about a foot away from the antenna. Below 20 MHz, I have yet to experience any RFI whatsoever. Between 20 and 30 MHz, RFI does begin to show up in places. It is very low in level for the most part, but I've had a few signals where copy improved when the NIR-10 was turned off. I doubt that anyone using resonant antennas mounted a distance from the NIR-10 would notice any RFI. RFI generated in the VHF spectrum is a bit more prominent. I've heard motorboat-type sounds from the NIR-10 on my FM broadcast receiver in the shack, and on scanners and 2 meter receivers. Again, external antennnas generally cure this problem too. In any event, any RFI coming from the NIR-10 is certainly much less severe than what most computers and packet stations generate.

The NIR-10 manual was obviously written with the hobbyist in mind, because it begins with a very concise step-by-step procedure for getting the unit hooked up and operational. Overall, it is very well written and complete. A schematic diagram is provided for the power supply and audio circuits of the NIR-10, and a block diagram is provided for the DSP section.

JPS states that registered purchasers will receive automatic notification of any software upgrades which are developed for the NIR-10. Such upgrades are offered to NIR-10 owners at cost (approx. $15), and are user-installable.

CONCLUSIONS:

The NIR-10 is probably more of a luxury than a necessity, but for me it was definitely worth it. One does have to take a little time to become accustomed to the NIR-10's sound and operation before it can be fairly judged. It's benefits are readily apparent on SSB transmissions, but on shortwave broadcasts they can be more difficult to recognize. A conventional audio filter may have some advantages over the NIR-10 in being able to tailor the audio response over a wider fidelity range, but the NIR-10's strength lies in its ability to remove noise from within the vocal spectrum while leaving the voice component largely untouched.

There is also an element of subjectivity in evaluating the NIR-10. I find listening to electrical static and buzzing to be especially grating, but some have an easier time overlooking these factors and are more concerned with maintaining natural sounding audio. If you're one of those people who enjoys cranking up the volume and letting the band noise resonate throughout your head, I'd put your money elsewhere. On the other hand if you're someone like me who likes peace and quiet, and prefers to listen at low volume levels without excessive strain, then the NIR-10 may be worthwhile.

[An additional review of the NIR-10 appeared in the Oct. 1991 QST (pg 36).]

****

The preceding was written and originally posted in the spring of 1993. During the summer of '93, JPS announced the release of NIR-10 software version 3.0. The upgrade PROMs, available at a cost of $25.00 to existing NIR-10 owners, offered the addition of a dynamic peaking function and enhanced notch filter performance.

The PEAK mode is activated using the bandwidth selector switch when the NIR-10 is in bypass or NIR mode. Thus, PEAK can be used by itself or in conjunction with the NIR mode, but cannot be used in conjunction with the notch filter or the bandpass mode. The manual pages included with the upgrade provide the following description of the PEAK mode on voice signals:

The PEAK mode is designed to peak up any correlated information
in the audio passband. It provides a second type of noise re-
duction by dynamically forming bandpass filters around correlated
information, thus automatically reducing the bandwidth to the
minimum necessary to pass information. The PEAK mode is most

effective on purely random noise, such as white or pink noise. When more periodic noise types are encountered, such as ignition noise or power line noise, the NIR mode or a combination of NIR and PEAK modes may be more effective.

I initially approached the PEAK mode with a good deal of skepticism. Given that it's inclusion was an afterthought and that peaking seemed more suitable with CW signals, I really doubted that it would even come close to the effectiveness of the NIR mode on voice signals. It didn't take much testing before I'd changed my mind though.

Activating the PEAK function in the SSB mode on a frequency with no signal present produced little audible change. Whatever background hiss was present remained for the most part. But with a voice signal present, turning on the PEAK function caused the amplitude of the voice to increase markedly and the background hiss to disappear. Tuning in a baseball game on a local AM broadcast station, the peak function boosted the announcer's voice and eliminated the crowd noise. The function does not produce the mechanized sounding voice which is characteristic of the NIR mode (when the NIR level control is advanced), but it does reduce the fidelity of the voice which in some cases results in a muffled sound. The muffling generally isn't too bad with SSB communications signals; but with AM broadcast signals, it can be quite pronounced and often significantly reduces the intelligibility of the audio.

The PEAK function does not have the noise removal power of the NIR function. It does nothing to reduce electrical noises, static and interference which are embedded in the voice signal you're trying to hear. But when the voice peaks are far enough above the noise floor, the PEAK function locks onto them and narrows the passband around them, completely silencing the speaker between syllables. This "quieting" effect is much more dramatic than that of the NIR function, but is depended upon the PEAK function being able to adequately isolate the voice peaks from the background noise. If you're having trouble just hearing the signal, the PEAK function probably won't improve it. This means that the PEAK function is much more of an aid to "listenability" than to "intelligibility." The NIR function still wins on those tough signals which are really down in the mud or heavily corrupted by noise.

I find that on a very quiet band where the background noise is dominated by smooth, thermal hiss, the PEAK function can isolate voice signals which are only a few db above the noise floor. In contrast, on noisy, static-filled bands, the voices must be substantially above the noise for the PEAK function to isolate them. Otherwise, the function "misses" many of the voice syllables; producing a very choppy and unintelligible output.

There is one particular circumstance where the PEAK function does especially well - dealing with thunderstorm static crashes. The PEAK function won't eliminate the static crashes, but it continues to peak the voice signals among them. This was demonstrated to me one night last summer when I was listening to a ham QSO on 75 meters. The voices were audible, but were surrounded by static crashes and were very difficult to

hear. The NIR mode offered only very minimal improvement. The PEAK function did not reduce the level of the static crashes at all, but it did significantly increase the output of the voice signals. I'd have thought the guy I was listening to had just clicked on his linear. Of course, those syllables which got completely obliterated by the stronger static crashes were still lost, but overall the voices were much easier to hear. Again, the PEAK function must be able to isolate the voice peaks in order to act on them. If the signal is so far down in the static crashes that you can barely even tell that it's there, the PEAK function will offer no improvement.

Unlike the other NIR-10 modes where the audio input level does not appear to be very critical, one must adjust the input volume carefully when using the PEAK function. Too much input results in total distortion, and with too little input the voice is not adequately "seen" by the PEAK function; resulting in the choppy output described above. I also find that when using the PEAK function on SSB signals, setting the receiver's AGC control to its "fast" setting usually results in more consistent peaking action.

Depending upon the signal being monitored, either PEAK, NIR, or a combination of both will be most effective; and there are still those occasions where the signal sounds best in the bypass mode with no noise reduction. Even with more than a year's experience using the NIR-10, I still find that there are no hard and fast rules determining which function to use. Trial and error is still my best guide, and it is best to try all options on each signal before settling on which one to use.

Overall, I've found that I use the NIR-10 virtually 100% of the time when I'm listening to SSB communications signals; even if it's only in the bypass mode. I've found that my receiver audio now sounds "flat" with it off. I usually put the device in bypass mode when I'm bandscanning and switch the processing on when I tune in on a signal. I'd guess that I use NIR mode processing 60% of the time, NIR and PEAK combined 25% of the time (though usually with the NIR level set quite low), PEAK function alone 10% of the time, and bypass mode 5% of the time.

I turn on the NIR-10 about half the time when listening to broadcast stations; generally when the signals are noisy or interference is present. When it is turned on, I leave it in bypass mode about a third of the time and use the NIR function the other two-thirds of the time. I rarely use the PEAK function when listening to broadcast signals (due to its muffling effect on the audio), but always give it a shot anyway. Occasionally, it turns out to be the perfect solution. Tuning the broadcast station in using the sideband mode (ECSS reception) often seems to result in better operation of both the NIR and PEAK functions, and eliminates problems of selective fading as well.

My friend with the Datong audio filter (mentioned at the beginning of this review) has since bought a NIR-10, and rarely uses his Datong anymore. His only major criticism of the NIR-10 is with the automatic notch filter. Activating it does remove the heterodynes, but also gives the audio an unnatural "hollow" sound and a degree of distortion. Neither the

automatic or manual notch filters on his Datong had this effect. I have also found that I rarely use the notch filter on the NIR-10 because of this. I'll sometimes turn it on briefly when monitoring the ham bands to get rid of a tune-up heterodyne; but if I'm dealing with a constant carrier I'll usually kill it using the ICOM's IF notch filter instead. I did not notice any difference in notch filter performance with the software upgrade.

I did end up modifying the audio input circuit of my NIR-10 so that the high input level setting is a bit more sensitive. Now if I have my ICOM's volume control set at a normal listening level, it is about the right level for NIR-10 when I turn it on. My friend has never felt that the volume setting on his receiver when using the NIR-10 was too high, but I use a very efficient speaker in a quiet room, which probably accounts for the difference.

(For those who are interested, the modification I performed involved installing a 15K ohm, 1/4 Watt resistor in parallel with R34; a 39K ohm, 1/4 Watt resistor on the left edge of the PC board.)

When ordering the software upgrade, I paid an extra $10.00 to special request bandwidths of 600, 1800 and 2400 Hz.; eliminating the 3000 Hz bandwidth which I had previously found no use for. The 600 Hz bandwidth does come in handy at times for CW, or when beacon hunting in the LF region, but I still rarely use the bandpass function on voice signals. Perhaps if it could be used in conjunction with the other functions I'd find it more useful, but the IF passband filtering in my ICOM has always seemed to be adequate.

Since I initially posted this review, I've heard from numerous other NIR-10 owners. The majority were genuinely impressed with the device, but there were a couple who said they saw no improvement with the NIR-10. This may have something to do with the types of band conditions encountered or the signals being monitored. Or perhaps certain people's ears just won't adjust to the "processed" sounding audio; I really can't say. I was monitoring a QSO last week on 75 meters which was down in the noise with some electrical buzzing. After activating the PEAK and NIR functions together, the stations practically sounded like they were communicating on the local FM repeater.

JPS has become much better known within the hobby community since I initially wrote this review, and has expanded its DSP product line. (The NTR-1 sounds like it was designed specifically to address the issue of limited fidelity for broadcast listeners.) Other manufacturers such as Timewave Technologies, MFJ, and Radio Shack have entered the DSP area since then as well. The Timewave DSP 9+ and DSP 59+ both received excellent reviews in the October 1994 issue of "QST." They take a different operational approach than the NIR-10, but since I haven't used them I won't speculate about any performance comparisons.

JPS NIR-10 SELECTED SPECIFICATIONS

```
Audio input.............................Unbalanced 22 ohm (or 47K ohm)
Frequency response.....................300 to 3200 Hz +/- 2 dB
Input level.............................120 mV to 2.8 V RMS
(internal level select jumper)
Absolute output delay
NIR and Bandpass modes.................130 milliseconds
Bypass mode.............................. 0 milliseconds
NIR mode white noise reduction
MAX control position...................Approximately 20 dB
MIN control position...................0 dB
NIR mode single tone reduction
MAX control position...................Greater than 40 dB
MIN control position...................0 dB
Time to cancel a suddenly-appearing tone
NIR mode...............................About 250 milliseconds
NF mode................................About 3 milliseconds
BP mode bandwidths
Amateur................................ 250 Hz, 600 Hz, 1800 Hz
SWL.....................................1800 Hz, 2400 Hz, 3000 Hz
BP mode center frequency...................Continuously variable 300-3200 Hz
BP mode ultimate rejection.................Greater than 60 dB
NF mode ultimate rejection.................Typically greater than 50 dB
(one to four tones)
PEAK mode White Noise Reduction............Typically 10 to 20 dB
Speaker output..........................2W @ 10% dist. into 3.2 ohm spkr.
Audio output distortion..................< 0.5% @ 1 KHz @ 0.5 Watts
Input power.............................11 to 15 VDC @ 0.5A avg., 1A peak
```

1835. Help from KAGOLD users!

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 08:36:45 UTC
From: smitty@azol.com
Message-ID: <39a7et$i7e@baygull.rtd.com>
Source record: 257471

Hello,

I recently upgraded my Kagold packet software to version 9.03 which has many more features than what I use to have. In this version you can make .cmd files which will allow remoter users to access the CD-ROM callbook and mod files. Ive been successful in coming up with a .cmd file that will allow this but what Im wondering, is there .cmd file that would allow the remote user to access my PBBS so they wouldn't have to disconnect from my system and then reconnect to the PBBS callsign? I don't want to turn the CMSG PBBS when Im gone or they wont be able to use the CD-ROM so I have my shutdown.tnc file set for CMSG ON. If there is a way to accomplish what I want to do please drop me a line and let me know. Also, I would like to hear any other nice .cmd file suggestions.

Thank you very much,
Smitty / KB7QEY smitty@azol.com

1836. Modifications for PRO-2032

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 09:07:00 UTC

Anybody having any modifications for the Realistic PRO-2032?
I am especially interested in changing the step from 5kHz to 12.5kHz in the
68-88 MHz band. 5kHz doesn't "fit" the channelsteps in Sweden <grin>.
Any other modification is of course of BIG interest!

Electronic greetings, Jann

I have found a that lot of biggots spell perfectly well. You'd never
guess until you press their hot buttons, and then their thinking goes
non-linear!

Found any new McNebulae recently? :-)

: Thanks for the info. I've always wondered whether QST should
: reject articles that advocate "transmit only" satellite
: capability on certain bands. I'm sure I'll see more of these
: if we get another satellite with a 1269 MHz uplink.

Rejecting may be a bit strong, but a good strong warning attached to each article would be appropriate, I suppose.

My UK licence requires me to have means of receiving on all frequencies that I transmit on. Is there anything similar in the US? it seems a sensible requirement.

I used to think that the British licence was far more restrictive than the US one, but now, after reading all the interpretations about packet content and legal penalties for repeating stations, I begin to wonder.

Cheers

Gary Coffman, KE4ZV writes:
>LA to Isreal? That's about 160 degrees of longitude. I don't know if
>that's possible in Oscar 13's footprint. Maybe.

I'm just a few miles from San Franciso and IT IS POSSIBLE.
I have QSL cards for contacts through AO-13 from Israel and
one a tad further East - Bagdad !

The really great thing in both contacts was that I actually *talked*
to both hams, not the usual HF "QSL, you're 5-9 here in California,
thanks for the contact" contact in the middle of a howling DX pile-up.

-.-. --.-
It's also interesting to read all the thoughts on learning the code. I
passed my Novice 5 wpm from a combination of on-the-air copy, rote
memorization and many practice sending sessions.
After that - I *learned* the code the old fashioned way -
on the air contacts.

As a Volunteer Examiner, I frequently ask folks how they learned the code -
especially for the 13/20 wpm tests. While my observations are certainly
not scientific and probably reflect my own bias, the folks that do
best on the Code Elements are those who:
1. Had a lot of on the air CW contacts. - OR -
2. Practiced frequently and methodically on a daily basis. -AND-
3. Had a good elmer like I did (thanks John, WA6RMK)

Lest I be flamed for being one of "those" Extras....
Many of the European hams I talk to on the amateur satellites have
no-code type licenses. Their technical expertise puts me to shame.
IMHO morse code should not be required, or if the regulatory folks
cannot bannish the code, they should drop it to only 10 wpm for exams.

Can anyone tell me the average value of a Drake tr7 and accessories. I know nothing about these vintage radios and a friend has a setup that he would like to sell to me at fair market price. I saw a transceiver, antenna tuner, desk mic, and ps among other goodies. Any input would be appreciated. What other accessories and how much go with the system?
Tnx for taking the time to respond

This appears to be fairly typical of VE sessions. We collect the money because the VEC says we must, but at the session where I participate most frequently, the money is just forwarded to the VEC; we've never kept a penny (for monthly sessions over the past several years). At other sessions I participate with, some of the VE team leaders will cover a fraction of their expenses, others nothing at all. This is _definitely_ not a money maker. We do it to serve the amateur community--that's you guys--not ourselves.

That's oversimplifying things a bit, I think. I'm a VE too...we give all
of our exam sessions following our club meetings, which means we never
even START before 8:30 pm, and we're expected to be out of our meeting
site by 11. Given the amount of time it takes for a person to take all
those written exams, it would not be possible for us to do a nonlicensed
to extra upgrade! I'm sure many other teams have the same problem. We
don't keep any of the money anyway. I and my fellow VE's have spent 100's
of hours on our job and an extra $5.75 exam fee doesn't really mean much.
I'd personally LOVE to have the opportunity to serve someone who could do
such an upgrade but in our case it isn't practical. 73 - Alan NS0B

From: cmd@intgp8.ih.att.com
Message-ID: <Cyp12I.GHw@nntpa.cb.att.com>
Source record: 257419

Hi,
I did a dumb thing the other nite and toasted the regulator board in the power supply for my Heath SB-104A. This PS has a regulator board number 85-1928-2 I think the date code is 041878. It looks like it has a crowbar circuit on it. I have a schematic for an earlier version without the crowbar. I would like to know the component numbers if they are available also.

If any of you have this schematic, I'd be very happy to hear from you. I would be glad to pay for the copying and postage costs for the schematic.

: : Gary's analysis makes sense if you are interested maximizing the
: : time you can work MIR, as opposed to just working them once.
: :
: Sorry, Zack, but I have to agree with Gary. In my experience working RS-10
: over the past few years, a simple vertical antenna works best. I use a
: home-brew 5/8 J-pole most of the time, with 10-30 watts. On really bad
: passes (close to the horizon) I switch over to a 5 element beam aimed at
: the horizon. In the 50+ contacts made, I've experienced a high angle dropout
: once or twice, when the satellite was *right* overhead (89.something degrees).
: Those happen very rarely, and the dropout lasted less than a minute.
: good candidates (for phone; I'm not up on packet sats yet).

According to my calculations, the minimum you need to work MIR
(height nominally 400 km) is 10 milliwatts to an antenna with 0
dBi gain straight up. I made the assumption that the astronaut
isn't an FM DXer, and isn't used to pulling weak FM signals out
of the noise (-118 dBm needed for a good signal)

Due to the increase in path loss, you need at least 15 dB more
signal when MIR is at the horizon. This assumes that you have
a clear horizon. When MIR is 8 degrees above the horizon, you
still need 11 dB more signal than when it is overhead.

Now, what does this mean in practical terms, since most people
run more than 10 milliwatts? It just means that you probably
have a 10 dB or so advantage if you are located in a good spot
as opposed to someone on the edge of the footprint. This is where
MIR is fundamentally different from RS-10. With RS-10, you can
still work people if you are 10 dB weaker than the strongest
stations. Signals 10 dB weaker in an FM receiver get covered up
completely.

A statistical analysis of possible MIR paths doesn't make
sense to me. If I wanted to work MIR I would look at the
actual paths and choose the best ones. Then I would make sure
my antenna and location was appropriate for the path. The
statistical analysis that might be useful is to analyze the
locations of stations that have worked people in space, to
see what places seem to have the edge.

If I was really serious I might even alter my travel plans
a little to give myself a better chance. After all,
traveling hundreds or thousands of miles for business

or vacation isn't unusual anymore. Personally, I'd rather
vacation in Hawaii than in New York City, even though it
is a longer trip that makes carrying a carload of stuff
difficult. Carrying something along to work MIR ought
to be easy compared to bringing something to worth through
Oscar 13.

Source record: 257377

I think maybe a paradigm shift is in order here.

Perhaps instead of viewing CW as a way of keeping riff-raff off the HF bands, we should view CW as a way of preserving some of the historic aspects of the hobby.

With solid state, computer-controllable, off the shelf rigs being the norm these days, CW is a great way of reminding us hams of "how it all began." Technology is moving us further and further away from our roots. I'm all for new technology and modes of operation (G-TOR, etc.). But let's not forget how this hobby began in the first place.

So to the no-code techs who want HF priviledges, I say to get in touch with the great history of amateur radio. You'll probably even have some fun while you're at it!

As one who has a call that can be used with the multiple letter ID, I
chose not to sign as
"N6 Triple Mike" for reasons similar to the above. The primary reason
is that I figure the lowest common lifeform would probably interpret it
as N6TM, instead of N6MMM (this thinking is a holdover from my computer
programming days).

Am I the only one left that remembers when Novice licenses *expired*?
And that to get the Extra class license, you had to *show* a year of
on-air experiance?

I had my Novice license for about a year, went down to the FCC field
office (remember *those*?) with a buddy of mine and after both getting
a jay-walking ticket we both managed to fail the code test. So we went
back 30 days later. (remember haing to *wait*?) I passed the code, and
took the General theory test. After the test the examiner asked me if I
would like to take the Advanced as well. Oh well, what the heck. I did
and I passed.

Still an Advanced class licensee. And now I hear people complaining that
the VE's were serving orange juice at the testing sessions.... Geeze!

If you're (warning puns follow) Gordon to go get the test after having
Bashered your skull with memorized bits, might as well take all the tests
at once before it all dribbles back out.

Message-ID: <1994Nov3.195811.2993@lpi.liant.com>
Source record: 257303

Inaugural North American Collegiate Amateur Radio Club Championship

1. Object: For college and university stations in all ARRL and RAC sections to participate in the ARRL November Sweepstakes and compete against other college and university radio clubs.

2. Contest Rules: CW portion takes place on first full weekend of November (Nov 5-7), phone portion takes place on third full weekend of November (Nov 19-21). Both start on Saturday 2100 UTC and end on Monday 0300 UTC. All rules, as stated in the October issue of QST, pertain to this collegiate competition.

3. Station Location: In an effort to encourage club station improvements all contacts must be made from the established club radio station located on a college campus. No "portable" operation from a nearby contest "super station". A club may operate from a member's station provided that a club station on campus does not exist.

4. Results: Separate champions will be determined for CW, phone and combined scores. Official results will be based on those published in QST so all participants are required to submit a valid log to the ARRL. Participants must also submit a score summary (the contest summary sheet, NOT a complete log!) to the collegiate contest moderator. Provisional scores and winners will be posted on the ham-univ and cq-contest mail reflectors by the moderator. Send results to:

Internet: barron@rmc.liant.com
Mail: Robert Barron
P.O. Box 180703
Austin, TX 78718

5. Combined Score: Winners in the combined category will be based on a points system like that used in the NA QSO Party. In order to be eligible for the combined title a valid phone AND CW score must be submitted. Points are awarded by taking the phone and CW score and dividing by the highest score submitted by a college station (for that mode) then multiplying by 1000. The phone and CW points are then added for total points.

6. Awards: To be determined. The ARRL has been asked to provide official SS certificates to the top ten finishers.

This means:
1. Not limited to multi-op single transmitter if multiple ops not available.
2. Not limited to US stations only (though still North America only).
3. All club members allowed to participate (not just students).
4. Club station rule waived when no club station exists.
5. Stations must operate BOTH phone and CW to participate in the combined

competition.

Jeff Tucker (N9HZQ) is keeping a list of college clubs that are planning on participating in this year's Collegiate Championship. To add your club to the list send Email (with your club's name and callsign) to: tucker@eedsp.gatech.edu

>dBi gain straight up. I made the assumption that the astronaut
>isn't an FM DXer, and isn't used to pulling weak FM signals out
>of the noise (-118 dBm needed for a good signal)

That's a pretty good assumption. That's a 0.28 microvolt signal at
the MIR crew's Japanese transceiver, assuming their external "vertical"
antenna's gain equals out with their feedline loss. (I don't have exact
figures on those two items.) That should give them something on the
order of 12 db of quieting in their receiver for a 10 mW uplink ERP.
Just 3 db more signal would give over 20 db of quieting thanks to the
FM effect. So an uplink ERP of 20 mW should deliver armchair copy for
the overhead pass.

>Due to the increase in path loss, you need at least 15 dB more
>signal when MIR is at the horizon. This assumes that you have
>a clear horizon. When MIR is 8 degrees above the horizon, you
>still need 11 dB more signal than when it is overhead.

So you'd need about 1.26 watts ERP at the horizon, or about 0.5 watt
ERP at 8 degrees elevation to deliver a 20 db+ quieting signal to
MIR. If our poster had a typical 4 watt HT (he doesn't, he has a
10 watt rig at a fixed station due to license restrictions), then
he'd have plenty of signal margin down to the horizon *if he weren't
penalized by an antenna putting a null at the horizon*.

>Now, what does this mean in practical terms, since most people
>run more than 10 milliwatts? It just means that you probably
>have a 10 dB or so advantage if you are located in a good spot
>as opposed to someone on the edge of the footprint. This is where
>MIR is fundamentally different from RS-10. With RS-10, you can
>still work people if you are 10 dB weaker than the strongest
>stations. Signals 10 dB weaker in an FM receiver get covered up
>completely.

But since our poster has a radio delivering 30 db more power than
you postulate, he can easily put a full quieting signal to the
horizon if he isn't penalized by a poor antenna choice. It's certainly
true that FM capture means that stations only 3 db stronger will
take over the receiver on MIR, but this isn't a power war DXer pileup
we're talking about. From his location, our questioner is going to
be nearly the only station in the footprint. If there *are* others,
they can take turns in an orderly manner *if their window is large
enough*. It won't be if they can only use the very few moments of
the overhead pass. If they can use the full 12 minutes of visibilty
available to them, their chances of a contact improve greatly.

>A statistical analysis of possible MIR paths doesn't make
>sense to me. If I wanted to work MIR I would look at the
>actual paths and choose the best ones. Then I would make sure
>my antenna and location was appropriate for the path. The
>statistical analysis that might be useful is to analyze the
>locations of stations that have worked people in space, to
>see what places seem to have the edge.

The problem with that idea is that MIR, and SAREX, operating
schedules are erratic and not under your control, while the
laws of celestial mechanics are fixed, and also not under your
control. You don't know that they will be operating during the
two minutes of the sole overhead pass you can reach on any given
day, or that you could win a power war with a station with thousands
of watts ERP if they were operating at that moment. You've got at
least six passes each day where you'll be in the footprint, for at
least 12 minutes in one case, if you can access them when they are
less than 30 degrees above the horizon. So your window of opportunity
for catching them on the air, and not being monopolized by an alligator,
is much larger if you don't concentrate on just the overhead pass.

>If I was really serious I might even alter my travel plans
>a little to give myself a better chance. After all,
>traveling hundreds or thousands of miles for business
>or vacation isn't unusual anymore. Personally, I'd rather
>vacation in Hawaii than in New York City, even though it
>is a longer trip that makes carrying a carload of stuff
>difficult. Carrying something along to work MIR ought
>to be easy compared to bringing something to worth through
>Oscar 13.

Well with current MIR operating habits you'd have to travel
to Europe, and compete with the guys with thousands of watts
ERP, since that's the only time MIR is currently operational
due to their power problems. That's supposed to be fixed soon,
and we should be able to go back to having leisurely QSOs
with the cosmonauts any time they are above our local horizon.
It normally helps if you speak fluent Russian, though right
now you'd do better to speak German. The cosmonauts typically
aren't DXers, and like to chat, if you speak their language.

With their aviation English, hello-goodbye type contacts are
all you can expect if you don't speak their language. Remember
the amateur radio gear is on MIR for *their* recreation, not
your award chasing. Respect that.

Gary

1867. FCC Busts?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 20:24:49 UTC
From: arthurc@crl.com
Message-ID: <39bguh$7b1@crl.crl.com>
Source record: 257389

I was talking with one of the local ARRL chapter presidents, who bemoaned the fact that there is one jerk who maliciously jams one of the popular local repeaters.
"We've complained to the FCC," he said, "But apparently, if the offender isn't disrupting commercial broadcasting, they don't want to deal with the problem."
That sad tale got me wondering: Has the FCC ever busted a HAM -- I mean HARD busted, not just a stern warning?

1868. License Arrived :-)

1869. Help - Ham Radio for RC Aircraft

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-03 21:19:10 UTC
From: Jim_Sollows@mindlink.bc.ca
Message-ID: <57732@mindlink.bc.ca>
Source record: 257291

I am trying to get some information on RC aircraft controllers
using Ham Radio frequencies. I am a licensed ham and am want
to joing the exciting world of RC Aircraft but before I do I
hope someone can answer a few questions for me:

1. What are the advantages to using Ham Radio frequencies for
RC Aircraft...asside from the obvious one of less congestion?

2. What are the disadvantages?

3. What frequencies are used, I have heard 6 meters (53MHz) to
2 meters (144MHz)?

4. Is a special transmitter required or just a module change
and where can they be purchased in Canada or the US?

I would appreciate any advice or comments. E-Mailed replies
would be appreciated to JIM_SOLLOWS@MINDLINK.BC.CA
Thanks

ARLD065 DX news

ZCZC AE63
QST de W1AW
DX Bulletin 65 ARLD065
From ARRL Headquarters
Newington CT November 3, 1994
To all radio amateurs

SB DX ARL ARLD065
ARLD065 DX news

The items in this week's bulletin are courtesy of Kirsti, VK9NL, the HIDXA, Chod, VP2ML, The DX Bulletin, Bob, W5KNE, QRZ DX, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column in QST. Thanks.

BHUTAN. Despite poor propagation conditions, a successful demonstration of Amateur Radio was carried out today for the Deputy Minister of Communications and staff. Jim Smith, VK9NS, reports that A51MOC is now the official call sign of the Ministry of Communications.

PACIFIC TRIP POSTPONED. Masa, JE1DXC, has run into transportation problems. His trip that included stops at 3D2, T2 and T30 has been postponed with no rescheduling date mentioned.

ANTIGUA. Ratko, YU1NR, continues to be active as V29NR. Recent spots show most of his activity being on 17 meters. Try 18115 kHz at 1510 and 1700 to 1730z. Also check 24951 kHz around 1600z. QSL via YU1NR.

CENTRAL KIRIBATI. Ron, ZL1AMO, reports his T31RW trip has been moved back until around April or May 1995.

HAITI. Missionaries HH1D and HH1T are Darlene, KB8CTC, and husband Tim, KB8CTD. They operate between 14260 and 14350 kHz around 2200z and 7288 kHz at 1000z running a TS-450S from a solar charged battery system.

IRAQ. YI9CW has applied for authorization to operate on 30 meters.

THAILAND. DL2VK will be signing HS0/DL2VK for about 6 months. Most activity will be CW, though packet, AMTor, PacTOR and SSB may be used.

HEARD ISLAND. Tony, WA4JQS, plans ahead. He is working on obtaining permission to visit the island in 1997. Until then he and WA8JOC, WD8SDL and W9OEH continue work on refurbishing 3Y0PI antennas.

UNITED ARAB EMIRATES. Don, WB2DND, should be in Dubai from November 11 to 16 and operate A61AD. Most operations will be early mornings and late evenings with Don having to do so around his work schedule. Check 160 and 80 meters around 0200z. He has a sked with WA2UDV and N1QMM on 14240 kHz at 2100z and takes calls afterwards. QSL via WB2DND.

TONGA. Paul, KK6H, should be on the air as A35RK from November 24 to February 7. Most operating will be CW on 160 through 30 meters. QSL his home CBA w/SASE.

MARIANA ISLANDS. Listen for JA2NQG signing AH0F on CW until November 6. JA2NVY is also along operating both CW and SSB as AH2CW/KH0. JI2UAY signs KH2GV/KH0 on 29 MHz FM. QSL via their home calls.

THIS WEEKEND ON THE RADIO. 2100z Saturday will usher in the 61st annual ARRL November Sweepstakes CW contest, which runs to 0300z November 7. Work as many US and Canadian stations as possible exchanging the classic Sweepstakes exchange information of serial number, power class, call sign, check number and ARRL Section.

The HA QRP Contest, sponsored by the Hungarian ARS and Radiotechnika Magazine, runs through 2400z November 7, from 3500 to 3600 kHz CW only. Use 5 watts or less output power. Exchange call sign, signal report, QTH and name. Both call signs and full exchanges must be sent and received by both stations.

International Police Association Radio Club contest, sponsored by the US Section of the IPA, is from 1800z to 2200z November 5 for CW, and 1800z to 2200z November 6 for SSB. Exchange signal report and serial number. US IPARC members will add IPA after serial number.

The Ukrainian DX Contest, sponsored by the Ukrainian ARL and Ukrainian Contest Club, runs 1200z November 5 to 1200z November 6. In this SSB and CW event, exchange signal report and serial number. Ukrainian stations will send signal report and two letter region abbreviation.

Details on all of these operating events appear on pages 125 and 126 of October QST.

First, get of your high horse, it's getting real old.
Second, this is the last time I'm going to discuss this issue here, it belongs elsewhere.
Third, as I said before, I DO NOT have to tolerate anything. It's the actions that result from my lack of tolerance that make that intolerance illegal. If I turn around a bash your head in, this is illegal, obviously. I'm here to assure you, I would never do such a thing. In fact, and in all honesty, I would not advocate such action and would most certainly come to your, or any other persons defense in such a situation. If I roll my eyes and say to my friend "Man, that's sick" this is perfectly legal. It is still intolerance, any way you look at it, it's the RESULT of that intolerance that makes it illegal or legal.
From now on, if you wish to continue this discussion, please take it to e-mail. There is no reason to discuss this any further here.

Scott, I can think of two things I would try in your situation.

1: Did you consider, if you can get roof access, hiding a
dipole under where the gutter hangs? At 25 to 30 watts, this
would probily work OK.
2: Actually load the gutter as a longwire? I know it sounds
nutty, but with a good transmatch, it can be done.

I know these may sound nutty, but some of the best ideas
are.

>Moving the preselector around to get into the ham bands can be a #^%! though.

Inside California use 510-656-5600 (fax: 510-656-2114); those of you
outside the Golden State get to use the toll-free 800-292-1700.

Besides selling Motorola, GE, Midland, Uniden, Icom, Maxon, Standard,
Radius, Yaesu, Kenwood, and Johnson radios they also sell reconditioned
service monitors and specturm analyzers by IFR, Motorola, Cushman,
Wavetek, Marconi; batteries, carrying cases, identifiers, duplexers,
combiners, cavities, tone and signaling equipment, antennas amps.
Their catalog says: ``Thousands of used and reconditioned
mobiles, bases, repeaters, portables, pagers and mobile telephones,
30,000 item reed/TCXO bank (exchange/trade program).''

They're located in Fremont, CA - has anyone ever been to their
warehouse?

We have to be a little careful here. Sure, using Zero Span on the visual
carrier, AM demod folded back into intensity control, some vertical control
may make this possible (maybe) but it sure is a lot easier to get option 10
for the Tek 2710 or 2712 SA's. This, of course, is the TV demodulator option
that lets you view the video on the CRT. I think HP has provided a similar
option for their CATV specific SA's also...
Bye... Ted..

Someone else already provided a fine answer to your question (funny how followups arrive days prior to the original article - why is that?), but I might add that the radio pioneers at the turn of the century were scattered about in many countries, and their government's were able to see first hand the important role radio and radiomen could play in the future of communications. Those experimenters were the amateurs of the day since radio was in its infancy, and thus there were no professionals at that point in time.

These are not my opinions. I've taken the time to read of the history of radio, since operating CW provided for my livelihood while serving in the US Coast Guard. Certainly, one should know the history of one's profession.

Interesting. I just (tonight) asked one of the local VE's about this,
he told me they send the 13wpm test at 18, and the 20wpm at 20. The
moral is, if you need this information to set up Supermorse so your
practice approximates a test session, call your local VE and find out
what's used in your area.

FredBesancon wrote:
: Is there anyway to pass CTCSS tones through a repeater system not
: really meant to pass such tones? Any special code available?

: Thanks, Fred (NT6T)

Most systems filter out the low frequencies (below 250Hz.) Although
community repeater (Commercial ones) usually retransmit tones so that
only "Your" units will hear you. You might try DTMF decoders to alert
your friends.

HI there.. Just read a packet message that Radio Shack in the USA are possibly selling an RF Amplifier for handhelds. .Has anyone heard anything about this or seen the catalog??. Would appreciate some reply since I could use such a little green monster for my handheld here!!! thanks...
Contact bh347 ... Gerard.. Thanks.

> I also noticed that when I activate the power save mode nothing seems

>to happen. Any help or advice much appreciated!

Well, that's the idea. It powers down when nothing is happening, taking

a peek at the frequency every once in a while to see if there's any

activity it should wake up for.

John's reply:

I agree with all you excellent advice, except possibly the above. He should
able to see the word "save" in the display. Again, he may not be holding the
F button while also pushing save.

Derek is of British origin. I think he still uses a British keyboard, with one or two special symbols on it - one of which prints in ascii as an invisible smiley. You just have to guess at the size of the smirk on his own face, too.

Spelling checkers, in the hands of those whom you'd think most need them, turn into malapropism generators. Just look at the frequency of its/it's they're/there/their from people using their native language.

Cheers

Message-ID: <39cteg$ctv@freenet3.scri.fsu.edu>
Source record: 257294

How can anyone complain about the monetary charges of VE's? Maybe those that do should learn a bit more about the history of examinations and be thankful that they no longer have to deal directly with the FCC. VE's are exactly that..volunteers......if it weren't for this type of system amatuer radio would definitely die out. My fee was exactly $4.75......for access to an interest that will last a lifetime..not to mention 10 yrs.....$0.475 a year is one helluva deal.

< nothing > :-)

That are some parameters you should know for a comparsion with other antennas:

- forward gain (*1)
- forward to backward ratio (*1)
- view angle (-3db) horizontal (*1)
- view angle (-3db) vertical (*1)
- typical (V)SWR window < 2:1
- typical impedance
- max. power (FM, SSB, CW, RTTY, etc.)
- boom length
- number of elements
- wind load/wind resistance (*2)
- $$

*1 = A diagram would be very fine and gives you a lot of information!
Much more then numbers .. :-)
And ...: what are they talking about: db, dbi, dbm?

*2 = I don't know the right word in English: "Last night we had a storm
(>100MpH)! All HAMS running the antenna 'xyz' should order a new one. :-)

Have fun ..

1891. Power Supply Survey!

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-04 11:59:46 UTC
From: slg@rfc.COMm.harris.COM
Message-ID: <Pine.3.87.9411040646.A113574-0100000@fep01.rfc.comm.harris.com>
Source record: 257297

I also have an Astron 35A. Overall, I am very satisfied with the performance of the power supply. It regulates very well under load.

However, I do have two complaints, one minor and one serious. First, the minor complaint: when you turn off the power supply, there is still voltage at the output terminals for probably 15 seconds until the caps bleed off. I'd like to see the output line switched so that when you turn the PS off, the output voltage drops to 0 V immediately.

The serious complaint is this: the regulators, mounted on rear panel heatsink, are totally exposed. Yes, they are recessed into the heatsink fins, but they are exposed none-the-less. There was a time when I was making some adjustment underneath my desk (where the PS lives), and one of my grounding braids shorted against one of the regulators, making a big spark. A plus for the Astron is that no harm was done, but that's beside the point. I've since covered the regulators w/ electrical tape. I've seen power supplies from other companies where the regulators are covered with plastic caps. I think Astron should adopt this approach.

Otherwise, it's a great supply!

Has anyone performed any experiments of base loaded hf moble antennas
vs. center loaded type.
All that I have read states center loaded antennas are better because of
the current distrution along the whip being higher than with a baseloaded type.

Ken

Actually there isn't. Ten Tec actually sold the 2510 Mode B satellite
station, which transmitted on 435 and converted 2 meters to 10 meters.
See the October 1985 issue of QST for a product review.

I'm not sure how sensible the requirement is on the millimetric bands,
like 241 GHz. I'd consider it perfectly acceptable for someone to get
their transmitter going first, perhaps aligning it with some sort of
waveguide filter/detector, and then working on a usable receiver after
he has some known signal source (the transmitter). In some areas,
it might even make sense to set up a beacon and see who can hear it
first.

It looks like the Great Wait is just about gone.

I passed my Extra on 9/29 . The VE Team sent the paperwork to the VEC on 10/3. VEC sent the paperwork to Gettysburg on 10/13. License effective date is 10/25, mailed from Gettysburg on 10/31, and arrived here on 11/2.

So the FCC had the 610 a grand total of 10 business days.

If you give the VE team a week, and the VEC a week, you should see your license about 4 weeks from the test date. Odd that it took Gettysburg a week to mail license after it was printed though.

Would a DXpedition to Navassa Island be worthwhile? As I understand it there aren't any really rare places in the Caribbean, but Navassa is at least doable from Florida.

Are there any other somewhat rare places in the Caribbean that would be worth a DXpedition?

Topic: Fox hunting

There are many aspects of amateur radio that many hams don't understand very well. In this edition we will cover fox hunting. If you do not know what fox hunting is, it is considered an exercise of locating a hidden transmitter by usage of triangulation. In simpler terms Fox hunting doesn't involve a real fox. Fox hunting is about hiding a transmitter and then have a group of other hams to look for the transmitter. Usually the group who looks for the transmitter generally are called the hunter(s). These groups of one or two in a team (maybe more or less in some areas), may use very complex directional finding equipment or even very simple equipment.
You may be wondering why hams go on fox hunts. Fox hunting is an exercise like Field day. The main purpose of it is to train ham operators or how to locate a transmitter of any type efficiently. Sometimes, hams help the local authorities search for downed aircraft, lost boats, or even lost campers. Fox hunters also search for possible sources of interference on a repeater, beacon, or on frequency. Fox hunters are an important aspect to amateur radio.
There are many ways to track down a transmitter. Equipment can be just a simple HT and a beam antenna or a doppler directional system (It is an automatic pointer, which shows the hunter the general direction of the fox). The hunters usually begin at a starting point a few miles away from the actual transmitter. The fox then transmits for one minute and then turns the transmitter off for 5 to 10 minutes and transmits again for one minute. Rules vary to from group to group. Some fox hunting groups requires the fox to transmit for 2 minutes every 30 minutes, but they have the option to have anyone to ask the fox to retransmit (with a penalty of a point deduction, whenever a group asks). Again rules vary from group to group.
Now that I explained the basics of fox hunting, I'm going to

focus on the fox. A few months ago, I had the pleasure of being the fox with another fellow ham, Mike WA9FTS. It was their monthly 146.45 hunt. Being the fox may be fun. You get to hide almost anywhere. You can make the transmitter small or large. To hide a transmitter in a small location, one can use a dual band HT which can automatically retransmit a signal heard on another frequency. On this hunt, Mike and I used a mobile Kenwood radio, with a motorcycle battery, and a J-pole, hid in a field with weeds all around us, a creek that was near, and a fence which almost incased us. To top it off, we hid ourselves underneath some military camouflage, which helped us blend into the environment. Our setup was so good, that one of the fox hunters just passed by only 10 feet away. This hunt lasted for an hour and a half. It was a great location, and I think almost everyone had a wet shoe or two when they went over the creek.

There are a few important considerations to be a fox. One, accessibility; it is not a good idea to hide on private property, or to hide in a place which is impossible to get to. Two, dangerous surroundings; it is not a good idea to hide in or near a place which may bring danger to you, the hunters, or the people who are nearby. Three, when you transmit, always address one of the hunters by calling their callsign. Failure to do so would be considered broadcasting. Four, notification. Notify the local authorities on what you and your group are going to do. This will tell them what is going on, if in case someone calls them up, saying that someone weird is walking up and down their street with a funny antenna (believe me, it happens). Five, if this going to be a driving fox hunt, make sure that there is a place for the hunters to park their cars legally. Fox hunting may be fun if it is done right, and safely.

Now that you know some of the basic rules and guidelines of the hunt, I'll tell you what it is like being the hunter. Last Saturday night, Mike and I went out to a fox hunt here in the Chicagoland area, and we ended up second. We used what Mike called a "L-PER" (It was like a beam antenna that is specialized in a way that it would point the hunter in the right direction). Aside from a good tracking system, you may need a few more things. Here are a few things that I would recommend to bring on a hunt. Flashlights, over here, the hunts starts after sundown and it gets very dark. Maps, preferably a laminated covered one that you can use a marker on and use over and over again. A ruler to plot a line from your location. Insect repellant lotion (self explanatory). Long clothing, in case the fox hides in a weeded field. A first aid kit, in case you or someone else cuts themselves in the weeded field. And the most important factor, luck, fox hunts are not always perfect. For instance, there was another group who arrived 30 seconds before us, and lucky for us, their door was stuck shut, giving us a few minutes to grab second place.

Everyone has their own methods in looking for the fox. Some

hunters stop the car, and look for the position; while others search, triangulate, navigate and drive at the same time. One more thing, when you are on a hunt, time flies very quickly, and hours pass without notice.
It is hard to describe the feeling you get on a hunt. My suggestion is to find a local group and ride along with them. Over here in Chicago, the group I am with has a fox hunt almost every Saturday. So ask around and tell us at Youthnet NEWS about your fox hunting experience.
For more information on fox hunting, go to your local library and read Transmitter Hunting: Radio Directional Finding Simplified, by Joseph D. Moell, K0OV, and Thomas N. Curlee, or Homing in by 73 Amateur Radio Today written also by Joseph D. Moell.
Special thanks go to Mike, WA9FTS, Art, WB9JIT, Mike, KB9ISW, and Nila, KB9ITR.

The first thing to remember is that a 12 dB front-to-back ratio (FBR) is only two S-units. Therefore you are NOT going to "SEE" any major changes in signal strength on today's equipment. This is especially true if you also have the AGC on and the RF gain up full. The tricks are to first drop the receiver RF gain down as low as possible while still hearing the desired signal, then rotate the beam to put a NULL on the interference. Also remember 1) ANY multi-band rotating antenna in that frequency range is going to be expensive because of material cost. 2) Extra forward gain requires more elements, therefore more material cost. 3) More FBR doesn't usually cost extra because it's part of the field tuning process. 4) Maximum forward gain, lowest VSWR, and highest FBR will always be found at different element length settings. You (or in this case, your friend) decide which is most important and tune the antenna accordingly.

Have fun this weekend in ARRL SS!

Perhaps different outside the US, but the 6-meter band
has parts reserved for Radio Control, up to 1-watt
transmitters.

Most other RC radios are in the 70MHz range, so if you
are a ham you get to use the 6-meter band if you want.

Oh, it works quite well, actually!

The receiver may reject a message presented during forwarding
for any reason whatsoever.

This is how the system has worked for the past half-dozen years.

(Jeff, WA7MBL first implemented it in about 1986, and all the
current BBS codes now use his method)

Steve, have you ever actually OPERATED packet and watched
what the systems are doing? Might be a good idea to spend
a few hours on air to see how it all works.

Can I be a pro-code extra who doesn't look down on techs? You seem to make
the two conditions mutually exclusive. The technician license has proved a
great entry point into amateur radio, and I have no problem with those
who feel it satisfies all their needs. Lots of tech are excellent
operators. Many of them--a majority in my experience--also upgrade.

If, in fact, you have a learning disability--and there are people who
do--you should consider the medical-certificate route. I have to admit
that I lift an eyebrow when people present them at the VE sessions,
primarily because it's an easily abused thing, but we accept them.

> extras there!). As a tradition, it is decades passed. Spark transmitters
> are a tradition, why not use them today?

Spark was a terribly _inefficient_ mode; it could take up nearly a whole
band. CW is about 5 to 10 times _more_ efficient than SSB for bandwidth
usage, and significantly more efficient in "miles per watt" than SSB. Bad
analogy.

What the Morse requirement does is force the average ham to learn it, which
is no big deal (again, that's for the _average_ ham), and does prepare him

to use it if he wants. There are a _lot_ of people who discovered CW was _fun_ once they learned Morse. They probably wouldn't have ever realized it if they hadn't _had_ to learn it. Because of its efficiency, it is _not_ a mode that ought to be ignored.

Granted that not everybody will find CW his favorite, any more than he'll find, say, satellite operation enjoyable. But that's no excuse for eliminating questions on satellite operation from the written exams, right?

> I am sick to death of being called a "whiner" or "complainer" when I ask

> because I cannot get my (receiving) code speed up to par???

Hey, if you have a legitimate problem here, and are not using this just as an excuse because you haven't seriously tried, then I don't think you're a whiner. There are alternatives: the medical certificate I mentioned earlier, and the sending test you mention below. Go for it!!

Good luck, and if you do have difficulty finding a VE team that'll accept the sending exam, check with ARRL. They may have some information on which of their VEs will accept it.

Steve:

I have had the AL-811H for about two years and has worked well for me. I abuse it quite a bit being an avid contester and not always careful about band switching and tuning it up. Any problems I have had relate to the operator, not the amp.

Tubes are easy to replace and relatively cheap when compared to the mega buck single tube 1500 watt babies. The price and gain seem to be in line and I can work 'em if I can hear 'em on 40 cw.

73,

>bands, we should view CW as a way of preserving some of the historic
>aspects of the hobby.

It's even a question on the exams, none of the purposes of amateur
radio are preservation of the past. That's not to say historical
preservation isn't a worthy *voluntary* goal, but it's not a basis
for licensing requirements.

Beyond history, however, Morse is a sometimes useful tool to have
in the toolbox of communications skills an amateur may wish to
possess. It's not very useful for a lot of things, IE fax is a
lot better for conveying a schematic over the radio, voice is
a lot quicker and clearer in intent, some digital modes are
better under weak signal conditions, etc. Still, Morse is not
useless, so some amateurs may want to learn it for utility as
well as historical reasons. However, it does not deserve the
special place it holds in *testing*.

Morse is just a tool, like any other tool we use in radio, and a
fairly blunt tool at that. Affixing emotional baggage to it's
retention as a test element is not useful.

Gary

1915. GB2RS News 6th November 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-04 19:52:17 UTC
From: dave@llondel.demon.co.uk
Message-ID: <784003937snx@llondel.demon.co.uk>
Source record: 257335
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 6th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

The RA has announced an increase in the number of licensees,

We have some updates to the GB2CW schedule and

Unusual solar activity has produced some fine HF conditions.

The RSGB represented amateur radio at last Tuesday's launch of the Radiocommunications Agency Annual Report. During the press conference, senior RA officials spoke of the huge increase in demand for radio services. The Society was assured that the Government believed in a balance of types of radio service so this was not a direct threat to the amateur bands, but note would need to be taken of the parts of the spectrum which are under-used.

The RA Annual Report shows a six per cent increase in the number of amateur radio licences in force, the total at the end of March being 63,033.

The new QSL Sub-Manager for the G4 SAA to SZZ call sign series is Mr D Lavis, G0DMT, whose address is: 48 Gilda Crescent, Polegate, East Sussex BN26 6AW. He has taken over from Mr J Payne, G7NCJ.

Next some additions to the RSGB's GB2CW Morse Practice Service:

From Wales, GB2CW transmissions take place on Mondays, Tuesdays and Fridays at 1830 UTC on 145.250MHz. It is operated by Janice, GW0KPD, at Port Talbot, West Glamorgan.

For South West England, GB2CW transmissions take place on Mondays, Tuesdays, Wednesdays and Thursdays at 1945 UTC on 145.225MHz. It is operated by Audrey, G4ULH, from Fishponds, Bristol.

The RSGB Morse Practice Co-ordinator is seeking someone to provide GB2CW transmissions for Novice Licensees on 50MHz or 432MHz in Somerset. Anyone interested is asked to contact David Pratt, G4DMP.

Full details of all GB2CW Morse Practice transmissions are given in the 1995 RSGB Call Book. An up-to-date copy of the schedule is available by sending a Self-Addressed Stamped Envelope to David Pratt, G4DMP, whose address is correct in the RSGB Call Book. His telephone is 0113 286 0439.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From the United Arab Emirates, WB2DND, will sign A61AD from next Friday, until Wednesday the 16th. Activity will centre on 160 and 80 metres at around 0200 UTC.

From Saudi Arabia, K3UOC is now active as 7Z5OO mostly on CW.

And from Martinique, F6AOI, F6BFH and F9IE will sign FM/own-call from next Friday the 11th until Sunday the 27th of November. Operation will be on all bands on CW and SSB.

Now the rallies we know for today, Sunday the 6th of November:

Today is the final day of the North Wales Radio Rally at the Aberconwy Centre, Llandudno. Doors open at 11am, or 10.30am for disabled visitors. The event features trade stands covering radio, electronics and computer interests, an RSGB Book and Information Stand, a bring and buy stall. Refreshments are available and talk-in is on two metres, channel S22.

The North Devon Rally is being held at the Holsworthy Memorial Hall, Holsworthy, Devon. Doors open at 11am, or from 10.30am for disabled visitors. The event features trade stands, a bring and buy stall. Refreshments are available and talk-in is on two metres, channel S22.

The Tyne and Wear Repeater Group Auction is being held at the Fencehouses and District Community Centre, Fencehouses, near Chester-le-Street, County Durham. Doors open at 10.30am for booking goods in. The auction starts at 12 noon.

Next the three events we know for next weekend, Saturday the 12th and Sunday the 13th of November:

Next Saturday, the 12th, the All Micro Show Radio Rally and Electronics Fair is to be held at the Bingly Hall, Staffordshire Showground, Weston Road, Stafford. This is off the A518, Stafford to Uttoxeter road and is signposted from junction 14 of the M6 motorway. Doors open at 10am. The event features trade stands supporting many computer formats, plus radio, satellites, and a bring and buy stall. Refreshments will be available. For further details telephone 01473 272002.

And now the two rallies for next Sunday the 13th:

The Barnsley & District Amateur Radio Club Amateur Radio Rally is to be held at the Metrodome Complex which is in Barnsley Town Centre, next to the bus and railway interchange. Follow the Metrodome and rally signs from junction 37 of the M1. The event features amateur radio and computer trade stands, clubs and groups, plus a bring and buy stall. There are ample parking facilities and a separate car park for disabled visitors. Further details from Ernie, G4LUE, who is available on 01226 716339 from 6 to 7pm daily.

The Donegal / Tir Conaill Radio Club Annual Mobile Rally is to be held in Jacksons Hotel, Ballybofey, County Donegal. Doors open at 12 noon.

The event features the usual junk sale. Refreshments will be available all day. Further details from Raymond, EI9DM on 010 353 73 37152.

The Midland Amateur Radio Society (MARS)- Stockland Radio Computer Rally is to be held at the Stockland Green Leisure Centre, Slade Road, Erdington, Birmingham. Doors open at 10am. The rally features the usual traders, local clubs and a bring and sell tables. Refreshment will be available. Further details from Norman, G8BHE on 0121 422 9787.

Now news of a Rally cancellation and change of contact details:

The Leeds and District Amateur Radio Society announces that, due to circumstances beyond its control, the Christmas Rally, scheduled for the 4th of December has had to be cancelled. Details from G0IBU who is QTHR.

The Bishop Auckland Amateur Radio Club Radio Rally is to be held on Sunday the 20th of November. The contact person is Mike Shield, G0PRQ, tel 01388 766264.

Now for the HF contest news:

The RSGB Club Call Contest will take place next Saturday, the 12th of November, from 2000 to 2300 UTC. See the October edition of RadCom, page 81, for details on frequency, exchange data and category of entry.

Also next weekend, the WAE RTTY Contest takes place from 0001 UTC on Saturday the 12th, until 2359 UTC on Sunday the 13th of November. See the November RadCom, page 19 for further details.

Next some VHF contest news:

The 144MHz CW Marconi/RSGB 24 Hour Contest takes place this weekend, finishing today, Sunday, at 1400 UTC. The RSGB 144MHz CW 6- Hour Contest also finishes at 1400 UTC today. For further details of either of these events see September RadCom, page 82.

The next RSGB 432MHz Cumulative Contest is next Friday, the 11th of November, from 2030 to 2300 UTC. See the July edition of RadCom, page 82 for further details.

And now the solar factual data:

During the period from the 24th to the 30th of October all solar parameters maintained their small recovery, two small flares were reported and the geomagnetic field ranged from quiet to sub-storm levels. The 28MHz band has given surprise openings to South Africa, South America, and much of Europe. This was in evidence during the CQ Worldwide SSB Contest.

The Sunspot index increased throughout the period, reaching 93 by the 30th, with the mean being 62. The solar flux levels also increased every day from 82 units on the 24th up to 98 units by the 30th. The period averaged 93 units. Only two flares were reported, the largest being a C4.7/SF at 1009 hours on the 25th. Several radio noise bursts were also

reported. A pre auroral enhancement occurred on the 28th and 29th with the 28MHz band being wide open. Beacons, LU4XF and VK5WI, were heard very well. The electron fluence remained at a high level throughout the period. The 90 day solar flux average on the 30th was 81 units.

The geomagnetic field started the period at sub-storm level, with an Ap index of 30 units, before declining to quiet levels. With the pre-auroral enhancement the index fell to only 6 units on the 28th but returned to sub- storm levels on the 29th and 30th, when Ap indices were 49 and 41 units respectively. Auroras were reported on both days. The disturbance was due to a shock wave from a coronal mass ejection on the 27th. The geomagnetic Ap average for the period was 22 units. The state has been mag alert most of the time. x-ray flux levels have increased slightly over the period to average B1.2 units.

The aa indices, as reported by the British Geological Survey for the period from the 18th to the 24th of October, saw mostly quiet levels with the 21st being down to 6.3 nanoTeslas. Late on the 22nd levels increased considerably and continued through most of the 23rd with levels up to 102 nanoTeslas lasting 12 hours continuously, about K5. The period averaged 29.9 nanoTeslas, about K3.

I'll repeat the figures. Spots - 62; Flux - 93; Ap index - 22; X-ray flux - B1.2.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 24th to the 30th of October, averaged 8.7MHz. On the 29th, with the pre auroral enhancement, levels reached 11.1MHz. The darkness hour lows averaged 2.6MHz, with little variation. The highs are mainly around 12.00 hours, while the darkness hour lows are around 05.00 to 06.00 hours.

I'll repeat the figures: Highs - 8.7MHz, Lows - 2.6MHz.

And lastly the solar forecast:

This week the more active side of the sun should be coming into view. Solar flux levels are expected to be around the mid 80s, with the geomagnetic field being unsettled today, then declining to quiet levels during the week. Ionospheric MUFs during daylight hours in the south are expected to reach 28MHz on north/south paths and for the north 25MHz. Darkness hour MUFs should be up to about 10MHz. With the seasonal changes now in effect east/west paths should be easier on the lower bands.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Juliet and G7 Tango Victor series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta November series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

It was my experience in the mid-late 60's that this (. ... .) was not only in bad taste, but was illegal. You had to log every CQ and identify every transmission. I was warned often about this practice when I was a novice and therefore never used it myself (fingers crossed). But, it did become the defacto CQ in the novice bands. It saved bandwidth and was a heck of lot easier to send than those gawd-awfull 2x3 callsigns we were assigned. But, soon thereafter we upgraded, moved to SSB and forgot CW, all together.

See y'all in SS this weekend.

>Wayne, W5XD

I asked the same question a couple years ago, to a fellow who said he knew.
He told me that he had called the factory, and the engineer there had said he
could run 600W (twice the rating) into the antenna without problems. No more
though! You'd probably do well to make the same phone call yourself, just to
be safe; definitely don't do it because I said you could -- I haven't tried
it on mine yet!

Over here (in the U.K.) the repeater keeper(s) would have the
Radio Police (tm) down on them like a shot!

We have clearly defined specifications (which must be strictly adhered to)
for such devices. Not unreasonably, one of the parameters specified is the
audio passband, with a lower cutoff frequency of 300Hz. And I'm sure you'll
appreciate that all of the CTCSS tones fall outside that range ... The
repeaters do, however, regenerate the CTCSS tone used to access them.

> Then one day, while engaged in a conversation of no great importance,

And this, of course, is a prime reason for not doing it. But you knew that
anyhow :-)

Hi All,
We have a KRP 5000, 440 Repeater and an ACC-96 Repeater Controller for sale. They are about 18 months old and work great. The reason that we are selling them is that they won't work with our present HF and Allmode VHF remote bases.
Selling price on the KRP 5000 is $1500.00
Selling price on the ACC-96 is $700.00

Please respond to me:

Message-Id: <tkelso.783989783@eel>

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, *(205) 409-9280*, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Re: High altitude balloon launch.

The SSOK (Sky Science Over Kansas) group is planning a high altitude balloon launch the weekend of November 12th with a backup date of November 13th.

This is a continuing series of helium balloon flights carrying a GPS receiver with the goal of reaching over 125,000 feet. With the use of GPS data an altitude can be verified within several hundred feet and used as a benchmark for future flights by amateur balloonists.

With an altitude of 125k feet, radio range should be near 500 miles for stations using beam antennas. We encourage all stations to send reports either by the 40 meter net or by the return address given below. Indicate when you FIRST hear the signal. Please give UTC time and your location in latitude and longitude or by grid square to 6 places. Please note the type of receiving system you are using at this time, i.e. narrow band (cw/ssb) or FM. Also send in the first complete packet line received, this will have the UTC time with it. With this information we will compare the calculated difference between the optical and radio range and study the signal propagation at different receiving points.

Flight information:

Launch date: November 12, 1994 Backup on the 13th
Time: 1500 UTC, (9am cst)
Place: Salina, Ks 97,46,43W 38,49,33N

Package information:

Downlink frequency: 144.340 Will transmit every 10 seconds
Mode: Packet GPS data, (GGA line)
Beacon#1: 147.310 <5mw
Beacon#2: 28.322 5mw

Net control:

Low band 40 meters: 7.155 Will have latest status starting at 1400 UTC

Call WB0DRL
Send reports to:

WB0DRL, callbook address
e-mail to <djs19@ksu.ksu.edu>

SB PROP @ ARL $ARLP045
ARLP045 Propagation de KT7H

ZCZC AP59
QST de W1AW
Propagation Forecast Bulletin 45 ARLP045
From Tad Cook, KT7H
Seattle, WA November 4, 1994
To all radio amateurs

SB PROP ARL ARLP045
ARLP045 Propagation de KT7H

Solar activity was up last week, with the flux almost hitting 100. Last weekend a coronal hole and the effects of a flare combined to give us several days of high A indices in the thirties. Conditions have calmed a bit, although there is still the possibility of more coronal hole caused disturbances this month. The worst period will probably be around November 19 and 20. Look for the solar flux to peak again near 100 around November 24 through 26.

For the CW Sweepstakes Contest this weekend we will probably have decent conditions, with solar flux at 90 or slightly lower.

Sunspot Numbers for October 27 through November 2 were 87, 90, 92, 93, 89, 81 and 67, with a mean of 73. 10.7 cm flux was 93.1, 97.4, 98, 98, 96.6, 92.3 and 91.4, with a mean of 95.3.

This week we have a special pair of domestic path projections for the Sweepstakes Contest.

For the path from California to New England, look for 80 meters to open from 0000z to 1230z, and 40 meters from 2200z to 0230z 0630z to 0900z, and from 1200z to 1430z. 20 meters looks good from 1500z to 2100z. There is a slight chance of 15 meters opening over this path around 1700z to 2000z.

The path from Texas to Ohio should be good for 80 meters from 2130z to 1430z, and 40 meters around the clock, peaking around 2300z to 1200z. 20 meters should be open from 1500z to 2130z. 15 meters might be open from 1730z to 2030z.

Aha... that explains the hook in my mouth. I thought international fishing had to keep 12 miles offshore. Yeah, I know, some fish jump right into the boat...

Anyway, on the topic of Maws Coad, what kind of key should a beginning ham get? I've got a code practice oscillator, and I could use that as a straight key. What is the difference between the iambic keys and the "bug" keys? I'm getting the impression that the bug isn't used much these days, is that right?

It's very possible that it may just be a bad desense problem. Check the notches in the duplexer to make sure that they are properly aligned. If you don't know how to align the duplexer, be sure to find someone who does. You can get yourself into serious trouble and even cause equipment damage if you don't know what you're doing.

Another problem might be that you need a ferrite isolator for your transmitter/amplifier. The signals from outside your system may be coming down the antenna and mixing in your own equipment to create the problem.

Just two ideas.....

1932. Help needed for mini VHF or UHF beacon transmitter!

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-05 05:53:01 UTC
From: jdc2@acpub.duke.edu
Message-ID: <39f6jt$kg0@news.duke.edu>
Source record: 257364
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,triangle.radio

Fellow Hams,
I have several hobbies, and I'm really trying to bring some of them together. Here's the general concept: I'm going to build a very small and light beacon transmitter on the 440 (or 144) band, and then launch it in a rocket in the Appalachain mountains. Here's what I have done:

1. Mountains: yep, they were still there last time I checked. :)

2. Rocket: Done. Really neat, too. Lots of fun to test!

3. Input signal that will go to the transmitter: Done. I have a voice chip being triggered by an oscillator ckt, and the product is a system that "says" my call sign every few seconds.

Here's where I need help: I need plans/schematics for a cheap, light, and small transmitter circuit. If anyone has any leads on where to find one, or if anyone could mail me a schematic I would GREATLY appreciate it. This is my first ham-homebrew project, so I don't have that many references to draw from. Thanks in advance for any help!

-Josh Carter N5SKQ
jcarter@cs.duke.edu

Also, if you want to check out pictures and details of the rockets built and tested so far, mosiac over to "http://www.ee.duke.edu/~jcarter" and go to the "Nob Croo" page. :)

Is there a internet connection to find out if a license has
been granted by the FCC? -- I seriously doubt that they've got that
far along with the speed-up process. Anyhow if not that easy, then
maybe a dialup for modem, or just plain voice phone #?
Just ready to start talking and the famous "waiting period"
has got me itching real bad to get going on this. Given the past
info from other recent license obtainees, next week it should be issued.

>All that I have read states center loaded antennas are better because of
>the current distrution along the whip being higher than with a baseloaded type.
>

Ken,

Theoreticaly this is correct, now in real world things look
quite different. Those slim center loading coils often found
in commercial design make tuning simple, since they effectively
absorb transmitted power.
For good signals you want to get a whip as long as your car can
support or the laws permit and use a really beefy loading coil,
with a diam. of 3" or more. for obvious mechanical reasons this
will have to go to the bottom.

Good luck, Moritz DL5UH

: On an related note, has anyone ever studied the effect that the Public
: Domain Q&A pools has had on the hobby? We've had, what? 10 years of
: experience with them? Seems to me it cheapens the whole hobby.

While they may have been derived from a different process, the availability of sample test questions has been around since at least the early 1950's when I was first studying to be a novice. I bought the AMECO study guide which contained hundreds of actual FCC questions from tests.

I surmise that AMECO and other study guide prooducers generated their question lists from people that had taken the exam and at least remembered several test questions. Get several hundred test questions that way and you probably had most, if not all, of the existing question pool being used at that time...even if the actual question pool wasn't publicly available.

I've said this before: As a teenager I memorized a good portion of the test questions. No, I didn't memorize that the answer to a specific question would be "C", rather I memorized that the answer to a particular question was a certain answer. In fact, today's theory tests still involve a great deal of pure rote meorization. What "theory" or logic is there to knowing what the novice subband frequencies are? ...None, the only way to know that is by pure memorization. The same is true for much of the FCC regulations (although some of the stuff is pretty much common sense too).

It would probably be better to ship via the United Kingdom. There might be
delays shipping via Argentina, and I don't know if there is a regular mail
service directly between the two countries since the hostilities. There are
frequent flights to/from the U.K.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 NOVEMBER AND FORECAST FOR 06 NOVEMBER - 08 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 83/24

GOES satellite data for 04 Nov
Daily Proton Fluence >1 MeV: 9.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.5E+08 (moderate)
X-ray background: A5.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Nov 07 Nov 08 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Nov: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 04 Nov
Learmonth 11 3223 2332
Fredericksburg 10 15
Planetary 13 18

Observed Kp for 04 Nov: 3533 3433
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Nov 8 Quiet to unsettled
07 Nov 14 Unsettled
08 Nov 10 Quiet to unsettled
COMMENT: Mild increase in geomagnetic activity possible on 07
November, due to small coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Nov normal fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Nov normal normal normal
07 Nov normal normal-fair fair-poor
08 Nov normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
05 Nov -10 15-20% depressed until local night, then recovering
to near predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
06 Nov 15 Near predicted monthly values
07 Nov 15 Near predicted monthly values
08 Nov 10 Depressed 10 to 15%/near predicted monthly values
COMMENT: Unexpected ionospheric depression/degradation was observed
yesterday. The cause of the depression is not known. MUFs at
Townsville were 10-15% depressed yesterday. Much improved conditions
expected for today.

Since the FCC is getting ready to activate Electronic Filing of FCC Form 610 Applications, the time that it is going to take (in early 1995) between testing and license receipt will be just a matter of a few days .. maybe even "hours."

The software is being tested right now by several VEC's including our operation, the W5YI-VEC.

>frequency.

I run nothing but Motorola equpment, base, mobile and portable. I will have nothing else. As for frequencylexability, all you have to do is lay out your band plan up front. Do it three or four times and ask yourself what channels you REALLY need and USE. Build your scan lists also with this in mind. I used to run MT1000 portables, have upgraded to MT2000 and my mobiles are all SyntorX9000. I rarely reprogram. I have moved a couple of times and after I am familiar with the new area, I lay out a new plan and set up the radio the way I want it.

I went Motorola because I go tired of the crap the manufactures pull with the consumers. They cannot get all the features right. They make one thing work in one model and break it in the next one, etc, etc, etc. The front ends also suck. I have yet to find a ham mobile that does not cave in under high intermod conditions.

I am not trying to start a flame war here Motorola vs Ham equipment. I jsut solved the roblem in the best way I had availe to me at the time.

Try posting this to sci.geo.satellite-nav where the experts hang out and
where you will get loads of help. Even garmin@tyrell.net chip in from time
to time. Or email them at that address.

Oh, I think there will be a little amateur radio activity! Approximately 400+ volunteer amateur radio operators provide emergency communications for the marathon. I think there are 16 nets (logistics, medical, runner-drop out, etc) operating on several 2m and 440 frequencies, but I don't have the exact frequencies.

>first.

Let me echo Zack here. There's no rule specifically against the
practice, aside from the catchall of "good amateur practice". I
think that there are cases where, as Zack indicates, having the
ability to radiate before having the ability to monitor, can be
considered good amateur practice. I don't think that's the case
any longer on 2 meters or 70 cm, and probably not at 1.2 GHz or
2.3 GHz either for analog operations.

As an aside, the issue of terrestrial repeaters is somewhat special in
that monitoring the repeater output can usually substitute for monitoring
the input frequency because they are generally functionally equivalent.
That isn't typically the case with satellite operations because local
signals may not be repeated sufficiently well by the satellite to be heard
successfully. Thus I consider it good amateur practice to monitor the
uplink before starting a communication when using the amateur satellites.
(I would agree that terrestrial operations in the footprint are a violation
of the bandplan, so the terrestrial operators have to share culpability
in this regard. But I think practices should be used by both parties to
minimize interference where practical.)

Beacons also fall into a special category in that they are permitted
one way transmissions. Operating satellite is not a one way activity.
Through analog transponders, it can be considered a form of split frequency
operation. How the FCC feels about the practice may differ.

The digital sats are another matter that falls into a grey area. I'm
not at all sure how to deal with that issue. On the one hand, I'd

like to say that automatic uplink channel monitoring for carriers
should be used, but I'm not sure that's entirely practical for amateurs
at this time. It is channelized operation, and so perhaps the onus
should fall more strongly on terrestrial users to follow the bandplan
in that case, IE the satellite operator has no other choice of frequency
in the digital case, contrary to the case of analog transponder operations
where moving a few kHz is practical.

Gary

1956. Cooling HeatSink on TS50

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-06 14:21:07 UTC
From: david@stat.com
Message-ID: <wPHDVc1w165w@stat.com>
Source record: 257311
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I use a TS-50 almost exclusively on pactor ... this puts a heavy duty cycle on the radio, with the heat sink usually getting quite warm.

The internal fan seems to have problems keeping up with this, so I'm thinking about using an external fan to help keep up the load.

Would it be better for the fan to blow air across the heat sink to cool it, or rather for the fan to draw air across the heat sink, or does it not make any difference?

1958. AM Broadcast Tower Question

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-06 19:11:58 UTC
From: mikej@wv.mentorg.com
Message-ID: <39j9pu$lqk@hpbab.wv>
Source record: 257249

A commercial station is moving an AM radio tower 1.5 miles from my bother's house. The station is broadcasting with 50,000 watts. A public hearing is being held next week on the application.

My brother is wondering if he should believe the station. IE. He will have absolutely no trouble with the tower. Or if he should believe the people living close to the present location. IE. They hear the station at all bands of the radio, on the toaster, if they have gold filings, lightbulbs burn out more quickly etc.

I do not read your newsgroup. If you have information that my brother could bring to the hearing, pro or con, please email me at the below address. So that this does not go on forever the hearing is Nov. 14, 1994. Thank you.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 NOVEMBER AND FORECAST FOR 07 NOVEMBER - 09 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 81/22

GOES satellite data for 05 Nov
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 1.8E+05
Daily Electron Fluence >2 MeV: 1.1E+08 (moderate)
X-ray background: A5.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Nov 08 Nov 09 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Nov: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Mostly unsettled with active levels
from 09-12 UT.

Estimated Indices : A K Observed A Index 05 Nov
Learmonth 15 3334 3332
Fredericksburg 25 12
Planetary 38 15

Observed Kp for 05 Nov: 4323 3334
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Nov 12 Quiet to unsettled
08 Nov 10 Quiet to unsettled
09 Nov 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
06 Nov fair-normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Nov normal normal fair
08 Nov normal normal fair
09 Nov normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
06 Nov 71 20-50% above predicted monthly values from 01-11 UT,
depressed 20-40% from 16-19 UT and near predicted
November values at other times. Sporadic E was present
from 19-23 UT, and obscured the F region at 2000 UT.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
07 Nov 25 Near predicted monthly values
08 Nov 20 Near predicted monthly values
09 Nov 20 Near predicted monthly values
COMMENT: Townsville frequencies were near predicted with 20-40%
enhancements 03-06 UT and 12-13 UT, 30% depressions 16-19 UT.
Sporadic E was observed 04-06, 20-22 UT.

>better because of the current distrution along the whip being higher than
>with a baseloaded type.

Hi Ken, Below 30m the coil resistance is higher than the radiation resistance which means if you put the coil at the highest current point (the base) you will encounter higher losses than if you put it at a lesser current point (the center). The average current is higher in a center loaded antenna because the transmitted signal doesn't suffer appreciable i2r losses until it hits the coil. Center loading is best and there's no good reason why you can't make the coil 6 inches in diameter (High Q=Low Loss) and support it properly.

One of the guys around here has a 6"x6" center loading coil on the front bumper of his pickup. He has a piece of PVC pipe supporting it clamped to the luggage rack on top of the cab. He has a capacitive hat two feet up from the coil and puts out a heck of a mobile signal. Mr. Mobile Worked-All-States (alias Jack Hill) uses a center loaded coil.

<with the FCC. VE's are exactly that..volunteers......if it weren't for
<this type of system amatuer radio would definitely die out. My fee was
<exactly $4.75......for access to an interest that will last a
<lifetime..not to mention 10 yrs.....$0.475 a year is one helluva deal.

<KE4RWQ

I totally agree. I just took and passed my Tech exams and I very much appreciate the time the VE's take to perform this important function. There's a fair amount of paperwork involved as well and my VE's were polite and helpful the whole time. I think we should all tip our hats to the VE's, the small fee they charge is one of the best bargains you'll ever find.

Tom (waiting for his callsign!)

Funny, how someone who considers themselves such a free thinker has to resort to belittling others to make a comment that they may think is funny. Let me tell you, being insulting is not funny. If you don't like people who have trouble spelling, that's just fine. If you don't like people in the NRA, that's just fine too. If you don't like people who have a problem with those who braodcast a sexual prefrence like it was some bright red badge to be worn, that's just fine too. But since you don't like these people because they are outspoken about how they feal and what the believe, and don't hold back for some bullshit high-minded notion, you give them hell.

Let me tell you something, at least these people have the GUTS to admit how they feal, and don't bow down to some crap that they have to be nice to everyone who comes along. The bottom line is everyone is different and we will always have differences, and at least some people will stand up for what they believe.

I'll tell you straight out; My spelling aint so hot, I'm a member of the NRA, and I (in all honesty)am not to fond of gay people. In other words, you insulted me, I don't appreciate it, and for all I care, you and your liberal bullshit can rot in hell .

Oh, by the way, get off your high horse, anyone who thinks they are "very intelligent" usually is an idiot (as proved by your post).

And at least I've got the BALLS to say it (which is a lot less I can say for most folks)

: it might even make sense to set up a beacon and see who can hear it
: first.

Thanks, Zack, Gary. I've seen the review of the Ten-tec unit.

You're right about millimetric bands being special cases. The old principle of building a receiver first to see who's active in your area is fine on the lower bands, but in such virgin territory you have to build both before there can be any working link. In getting a transmitter going (and keeping it going is fun with temperamental devices) something far less sensitive than a useful receiver will do, but then, during the bench test phase, you won't want to radiate your full erp. You'll likely not have the high gain antenna on, or will be squirting the thing at an absorber. (crushed ferrite material in silicone rubber junk-sculpture?).

Over here bandplans are purely voluntary. Certain modes are allowed/disallowed on certain bands but the EME CW Data SSB FM segment stuff is not mandatory. Only peer pressure tries to keep people in the right segment. The mention of "receiver" is wide open to interpretation as no performance specification other than freq and mode coverage is mentioned. If a case ever came to court, I'd guess that something good enough to check that your freq was not already in use would be expected, and we all know the case of being in range of the listener but not of the transmitter..

Still, it's good practice to listen.

Cheers

Its better to draw air across the TS50S. However, make sure that air is drawn THROUGH the TS50S's heatsink. Open it and study the installation.

Remember to use the TS50S at 50W in PACTOR.

: getting the impression that the bug isn't used much these days, is that right?
: -Dave

Very very much a matter of personal taste. If it feels good and
sounds good, use it.

Most of the people I advise on Morse matters are heading for the
British morse test. Unlike in the US, sending is mandatory - 12 wpm on a
straight key, so I advise them to practice on a "handpump" and not to
even think of bugs and paddles until they've passed. Even without such a
requirement, I'd still suggest that straight key practice is useful as a
foundation for the unavoidably necessary ear-hand coordination.

A few people still use mechanical bug keys, they like the
characteristic sound with regular dots and free-form dash length. They
can give your sending quite a bit of personality. Many people who don't
use them buy them for collections so prices are in the silly fool
antique shop bracket. A specialist affliction, but can be fun.

In straight keys, I use a variety and change often to enjoy the
contrasting styles. Mostly I use an RAF type "D" - These were ex-bomber
command ground station keys (it's not too tactful to mention this in some
QSOs :-)) The feel is delicate and fairly fast. I have a recently
made heavy brass job on a welsh slate base that as an action like a lift
bridge. Looks a gem of a mantelpiece ornament but has an action as heavy
as a lift-bridge, crude but slows me down a lot. I have a copy of a Brit
naval key that is light, very fast indeed and I tend to runaway with the
speed. I've just recieved a real original of this design - it actually
arrived on my desk while typing this! looking forward to trying it out
tonight.

Something included in a practice oscillator could be a bit cheap and
nasty for serious enjoyment and prolonged use. The R.A. Kent keys seem
to be popular around the world, and their kit makes an ornamental but
effective brass job at a good price. Don't rely on anyone elses choice,
though, this is a very personal matter.

The Iambic part of a system is really in the electronic keyer. The American CMOS Superkeyer II is the one to compare all others to. Paddle choice is again, personal. The US bencher paddle is very popular, but I don't get on with them (light but neat construction - falls apart when I get excited... exciting contact has gone by he time I've collected all the springs and bushes from the shack floor) I use the Kent paddles which are built like a battleship, and suit my tastes. The "Jones" paddles look very good, unfortunately the only one I've met had poor bearing alignment and a lot of friction. I wonder if it had been damaged.

A bug key has a mass-spring resonator to make a string of dots when you shove the paddle one way (it stops when you release the paddle) and a plain contact that operates when the paddle is shoved the other way to let you make your own dots.

Electronic single paddles (El-bugs) make strings of dots nd strings of dashes electronically, controlled with a single paddle. The strings are started by you moving the paddle so you don't start part way through.

Iambic paddles are similar, but with the paddle split in two. one for dots, one for dashes. The addition is that if you operate both paddles at once you get an alternating string .-.-.-.-.-. or -.-.-.-.- etc depending on which paddle contact closed first. You can also embed a dot in a string of dashes (and vice-versa) by pulsing the dot paddle while the dash is held (and vice versa to embed a dash) It takes some practice, but allows fast morse with minimum finger movements.

Both typing fingers now sore,

Cheers

1978. Subject: Ham stores in London ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-07 13:38:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2EBE2E5A@smtp>
Source record: 257233

I wouldnt buy anything in London!
Their prices are exorbitant.
Lets do a comparison:
Street price of a TS50S
in the UK is in the US is
UKP 995 or $1658 $969
minus VAT (17.5%) = $1411 none
minus import tax (at 6.5% = $1324 N/A
Price is then $1324 $969

A typical margin on the TS50S in the UK is 32.5%

less margin= $994 dealer buys from Kenwood UK (Kenwood UK in certainly in it for the money!)

There are SOME lessons here:

1/ UK AMATEUR RADIO STORES MUST REALIZE THAT IF THEY ARE IN IT FOR THE MONEY THEY SHOULD CHANGE PRODUCTS

2/ UK IS THE MOST EXPENSIVE MARKET FOR RADIOS IN EUROPE (ALTHOUGH GERMANY COMES PRETTY CLOSE TO THE MOST EXPENSIVE CATEGORY AS WELL).

3/ IF YOU WANT CHEAP PRODUCTS, BUY FROM IRELAND (THE TS50S SELLS FOR $1340 retail) OR YOU CAN BUY FROM THE U.S. and get a ticket to the US free in the deal.!

What is cheap in the UK is second hand stuff. The UK economy is such that people need money and sell their equipment at real low prices.

This is one man's opinion.

Entire *books* were published in the 1950s and later covering all
the elements of the Commercial exams; in fact, I studied *thousands*
of questions before sitting for the First Class Radiotelephone exam in
1973 (which consisted of about 40 questions covering Elements 1 & 2
{Basic Rules & Regulations and Basic Operating Procedure}, 100
questions on Element 3 {Basic Radiotelephone Theory} and 50 questions
on Element 4 {Advanced Radiotelephone & Broadcast Theory}).

The ARRL License Manual I studied in 1956 had lots of questions
and answers for all grades of license then available (Novice,
General/Technician, Extra).

>I've said this before: As a teenager I memorized a good portion
>of the test questions. No, I didn't memorize that the answer

>to know that is by pure memorization. The same is true for
>much of the FCC regulations (although some of the stuff is
>pretty much common sense too).

Precisely how I did it, too. Of course, by the time I studied
for the First 'Phone I had been an Electronics Tech for over 10
years, so if a certain correct answer in the study guide didn't
make sense I went back to a theory book to find out why. But,
at that time it was my *profession*, not just a hobby, so the
motivation was different than just getting a ham ticket; I *needed*
to know the "why."

1980. Ham Cottage in Ireland for rent

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-07 14:06:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2EBE34A4@smtp>
Source record: 257235

I have a rather remote cottage in the extreme south west of Ireland. It is situated about 5 miles east of Cape Mizen Head, and about 2 miles west of the village of Goleen, County Cork, Ireland.

I have a rhombic installed that is oriented North-west/south east. The rhombic is 10 wavelengths on 20m, 5 wevelengths on 40m, 2.5 wavelengths on 80 and 20 wavelengths on 10m. It is switchable NW/SE and is headed exactly for the center of the US. Gain on 10 is about 28db, on 20m it's about 19db (not tested but from manuals).
The cottage has electric shower, electric oven, microwave, satellite TV (includes CNN, TNT/Cartoon network), and two bedrooms upstairs with 2 double beds and two bunk beds. It also includes storage heating. There is a phone and the neighbors take care of the house (they live about 1.5 miles away).

The house has 240V electricity, however in the shack area of the kitchen there is a 1600W 110V transformer. There is also a 20m dipole for comparative measurements.

For XYLs there are many sites to see, dolmens, copper mines (iron age), castles, walks, fresh fish and nice shops in the nearby villages (Goleen, Crookhaven and Schull). In Schull there is also the only planetarium in Ireland.

For OMs, there is excellent facilities, plus Marconi house (in Crookhaven) and nearby Mount Gabriel which has the last European radar station for transatlantic flights (it is controlled from Holland). It also retrasmits VHF air comms for Shannon, London, Brest, Scotland etc and has absolutely marvelous views (it's about 1500 feet up). About 3 hours by car you can go to Valentia Island (with a narrow bridge) where there is the Search and Rescue station covering the atlantic as well as the place where the first submarine cable between St Johns, NF and Europe was laid.

This can be the base for a wonderful holiday. Eat fresh fish. Local lamb. Even pluck a chicken. Or hunt a rabbit (millions of them; hunting rabbits and foxes allowed year-round). Or taste the beer from one of the 6 bars (pubs) in the nearby village (has about 100 residents - mind you, one of the pubs sells shoes, the other is also the local gas station, the third is the butcher and the fourth is the general store/post office).

The cottage rents for $300/week. You need to bring radio and antenna tuner as well as P.S. (if it's not main powered). And clothes. And I suppose some money. You can fly into Shannon and drive (about 4 hours - drive on the left) or into Cork (2 hours drive).

It is available from the spring of next year(95). Most flights from the US permit stopovers in Shannon, so make a stop and have some ham fun this part

of the pond.

HI there.. Just read a packet message that Radio Shack in the USA are possibly selling an RF Amplifier for handhelds. .Has anyone heard anything about this or seen the catalog??. Would appreciate some reply since I could use such a little green monster for my handheld here!!!

Disclaimer: I work part-time for Radio Shack but don't expect to gain from this message. I post this for general information and offer my opinion.

On page 39 of the catalog I read:
Five Watts in gives 30 Watts out
Receive pre-amplifier
Helical receive filter
$120

This item is not yet available. As of last month the store computer didn't even have a current listing for that catalog number (19-1122).

(Opinion)
If the quality of the other amateur gear is any indicator of the quality of this amplifier then I think it will be a pretty good product. The price is good for the amount of output power, and the output power is just right. (I have a variable output power mobile radio and I usually run 5 to 30 Watts. I can run 50 but haven't ever needed it.)

: antenna that it is. E.G. While rotating the beam and listening to a
: distant station, it seemed that the DX station signal remained the same,
: regardless of where the beam was pointing.
: Dan Swift, N5UPG

I have the PRO-96, the PRO-67Bs big brother. The F/B on the PRO-96 is
only about 10 db on 20 meters, its better on other bands. I'm told that
the newer Mosley antennas were designed for max forward gain not F/B
ratio. So if you have some F/B I wouldn't be too worried. However you
stated that the antenna acted like a rotating vertical!? If you don't
have many db of front to side rejection something is very wrong.

: Aside from regulations *I* would nou take the risk.
: I allways thought there were special bands for RC??

Sorry to hear that things are so bad in Germany.

I've not heard of any problems in the USA. The
primary disadvantage is one of cost--manufacturers
only provide an amateur band option (6 meters) on
their most expensive models.

There has been a push by the AMA, Academy of Model
Aeronautics for better receivers, allowing multiple
planes to fly at the same field with minimal
interference. I think there were plans to phase out
the old receivers, but this hasn't happenend.

The band plan has space for both the older and
newer gear.

Source record: 257241

Simon Kwan wrote:
>... range improvement from a 10 db Yagi

All other things being equal, an extra 10 dB of gain would give you about 1.5 S-units greater received signal at the other end. However, your 5/8 was already giving you about 3 dBi gain, so you are only getting a net 7 dB increase at best; this is about one S-unit. So if you were, say, S4 with the 5/8 antenna, with the beam, you would be at about S5. Actual range for terrestrial VHF applications is determined principally by terrain, not gain and power considerations.

Here's the actual math: Pr = Pt + Gt + Gr -Lp, where Pr= received power (dBm), Pt = transmitted power (dBm), Gt = transmitter antenna gain (dB), Gr = receiver antenna gain (dB), and Lp = path loss (dB). Lp is in turn made up of "free space" path loss plus terrain path loss. Free space path loss (dB) = 20 Log F + 20 Log D - 36 (approximately), where F is frequency in megahertz and d is distance in miles (I'm doing this from memory, but I think it's right. Someone correct me if I got it wrong). Terrain loss is highly site specific, and depends on the dielectric properties of the earth on your area, and the height and shape of the terrain between the transmitter and receiver.

Good luck.

1992. Omni VI->PK232 hook up

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-07 17:29:01 UTC
From: jmg@tntech.edu
Message-ID: <1994Nov7.112901.4824@atlas.tntech.edu>
Source record: 257243
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Help would be appreciated.

I would like to hook up my PK232 to my Omni VI using the FSK mode. If anyone has successfully done this, I would greatly appreciate the details. In my 232 manual it says something about needing a resistor for this mode.. but may be outdated or not apply to the Omni VI.. but want to make sure.

I believe that the FSK mode is best for PACTOR, RTTY.. it was on my Kenwood 850 because you then could use the filters. I have purchased the digital filter for the VI and want to make sure I can use it.

thanks in advance for any help

I think it's easy to see why they did - who'd want to deal with a bunch of cheap bastards who are convinced they know more about radio than the people selling them stuff they can't make themselves? Add to that the totally unrealistic expectations of low prices, high quality, value retention, and dependability, and you have a market that NO ONE would want to enter.

What puzzles me is why the various overseas manufacturers are in that business, and how they actually manage to make a profit from hams.

And yes, I used to work for a ham store. I'm speaking from experience.

How high is it installed? A Yagi antenna installed less than a half
wavelength above the ground loses a lot of directionality.

for those of you keeping up with the time for license arrival (or like me this past month- wondering when yours will come) mine made it today in 5 weeks even.

i took the test in marietta, ga. on oct 3 and the license arrived today nov 7. 5 weeks to the day. the license was effective on oct. 28 and was postmarked in gettysburg on nov 3. it is a no-code tech license (i know!, i know!- i started studying code while waiting and i'm up to the 5-7 wpm range now, [according to morse academy software] and will test some more when i can do 20 wpm).

thanks to those of you before me who posted your times. it help my anticipation anxieties!

How about that 2m/440 Dual band mag-mount mobile antenna that Radio Shack sells?

I believe it is 1/4 wave on 2m and 5/8 on 440, and I have heard that any 5/8 wave antenna needs to be tuned. Well, RS fails to sell a VHF/UHF SWR meter, and there are no local "Ham" shops.

So, my question is, does this particular antenna need to be tuned or not? (The salesman didn't know anything about it)

If you mean actually kick down the door and arrest someone, I doubt that the FCC has the authority to do that. If you're jamming military or air control traffic, the FCC will probably be who tracks you down, but the appropriate law enforcement folks will probably make the actual arrest. I have heard stories of cops arresting jammers in the act, often after some hams have helped DF the guy. The FCC can fine and revoke licenses but the actual physical enforcement is not their job.

>--
>73, Cecil, KG7BK, OOTC (All my own personal fuzzy logic, not Intel's)

I was a novice in 1961. While shave-and-a-haircut was used as described
above, what did happen occasionally was after two stations signed with the
". ... ." ". ." sequence, a third might jump in with the same to try to
contact one of the previous qsoing stations. This is occasionally heard today
with a third station echoing the ". ." of the signing stations.

Back in the early 60's though, "QRL?" was hardely ever heard and certainly I
never heard in on the novice bands. Instead, a novice might use ". ... ." to
mean the same thing as "QRL?". With the poor selectivity of the receivers we
were using, a ". ... ." transmission really stood out and probably got as much
attention as a CQ (I could monitor a 25 Khz chunck of the 40 M novice band
without retuning with my old SX-17). I know that a significant percentage of
my novice QSOs were started that way.

The operating practices on the novice bands in 1961 are certainly different from those used today. They were adapted to the crystal controlled transmitter, broad as a barn door receiver selectivity, and 5 to 7 WPM operating speeds of that day. It worked just fine then. I wouldn't try to use those procedures today.

I currently use a 20-amp Astron power supply for my HF rig and a
car battery for my 2m/440 mobile. Is there any reason why you
should or should not use a "switching power supply" from a PC
for powering a radio? What are the differences between the P/S's
that I use and the ones in PC's?

Source record: 257255

Is there a file that lists the criteria that were used to select each
non-sovereign DXCC "country"?

For example, how did St. Paul Island get DXCC status?
Why is Sardinia a "country", but not Sicily?
It doesn't seem to deserve DXCC status any more than Catalina Island
(California), Nantucket Island (Massachusetts), Gotland Island (Sweden).

I couldn't find anything like this on the index of info@arrl.org.

Inquiring minds want to know...

Earlier this year I passed the five written and one of the code tests,
as well as taking the other two code tests which I didn't pass, all in
one session and the total time was two and a half hours. That's
including the time for the VE's to grade my exams, along with all the
exams of the other candidates, as well as waiting for all the forms to
be filled out and signed.

Four months later, I passed 1c to get my Extra. :-)

I have a TA-32jr 2 element beam that I used to run a Heathkit SB-200
into. This put out about 500-600 watts on the higher bands. I fed it
with about 50 feet of RG-58 also. No problems.
Check the traps for spider nests, connector corrosion, etc. and use
Pentrox, available from Mosely, on all sleeves and joints. An
excellent antenna, IMHO.

>
i went from "morse what?" to passing the general in < 30 days. getting to 5 wpm
wasnt much of a problem, listened to the gordon west tapes, took about 5 days
studied for about 20 minutes a day, but i also translated every sign i saw into
morse (as per my teachers instructions) while, driving i'd stop at the
"ditditdit dah dahdahdah ditdahdahdit" sign, etc. all day long, exit signs,
macdonalds signs, etc. took the test five days later, passed by the skin of my
teeth -- 7 questions out of ten on the multiple guess. took the general 3 weeks
later after listening to the gordon west general tapes -- getting to 13 was a
LOT harder, studied 30 mins a day, tried for every day but didn't make it.
listend to some computer generated code, learned to get lazy and put down a ","
whenever i heard punctuation. on my 13 wpm test i got about every other letter,
it was enough to allow me to pass (8 out of 10) and while i was taking my
theory test, they were doing the novice code test in the same room. i was able
to copy down the 5 wpm code while taking my general theory with no strain at
all, just for yucks, didn't even slow me down. i suppose this means that if i
study for 20 wpm i'll be able to do the same thing for the general cw?

the code isn't difficult to learn by any means, it is just sometimes tedious.

Hello all

Recently while cleaning my Alinco DJ-560, I happened to see what I always see. When the battery plate on the bottom is removed, a small orange wire gets exposed. I traced this wire deep into the circuits of the radio, and therefore I think it a modification wire. But here's my problem, what does this wire do when cut? I haven't cut it yet because of this unknowing. Any help at all will be greatly appreciated. Resonces can be posted or emailed to me. Thanx

ARLB089 Action on digital HF

ZCZC AG54
QST de W1AW
ARRL Bulletin 89 ARLB089
From ARRL Headquarters
Newington CT November 8, 1994
To all radio amateurs

SB QST ARL ARLB089
ARLB089 Action on digital HF

Actions on digital plan

The ARRL has filed reply comments on FCC PR Docket 94-59, that proposes to allow automatic control of digital stations on the HF bands under certain specific conditions.

The League said that it shared concerns filed by some amateurs, about the possibility of interference to amateurs using other modes, and urged the FCC to adopt its original proposal for specific subbands and other restrictions.

The ARRL made essentially the same recommendation in its comments on the FCC proposal in early October. By that time, the FCC had received comments from 15 parties, eight opposed to automatic HF control, five supporting the League's proposal for specific subbands, and two supporting the ARRL plan but with additional provisions for avoiding interference.

The League said in its reply comments on November 1 that since some parties suggest no restrictions, while others advocate no changes at all at this time, that it, the ARRL, favored a middle course, as it originally had proposed (and was the basis of the Notice of Proposed Rule Making).

More information was in August, 1994 QST, page 71.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 NOVEMBER AND FORECAST FOR 08 NOVEMBER - 10 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 082/023

GOES satellite data for 06 Nov
Daily Proton Fluence >1 MeV: 2.0E+06
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 2.4E+07 (normal)
X-ray background: A6.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Nov 09 Nov 10 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Nov: 080/020

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 06 Nov
Learmonth 5 2112 1222
Fredericksburg 12 27
Planetary 12 37

Observed Kp for 06 Nov: 4466 4432
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Nov 12 Quiet to unsettled
09 Nov 10 Quiet to unsettled
10 Nov 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

07 Nov normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Nov normal normal normal
09 Nov normal normal normal
10 Nov normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
07 Nov 27 20-30% above predicted monthly values at 00 UT and
05-08 UT and depressed 20-40% from 16-18 UT. Sporadic
E obscured the F region from 01-04 UT and at 12UT. At
other times frequencies were near November predicted
values.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
08 Nov 20 Near predicted monthly values
09 Nov 20 Near predicted monthly values
10 Nov 20 Near predicted monthly values
COMMENT: Townsville frequencies were near predicted monthly values
with 30-50% enhancements from 10-14 UT.

Hell if they don't then let's all have a protest day and operate out of our bands. Then we'll see what kind of response as we bleed all over everyone!

Take a look at the Brown Bros. Machine iambic key. I think it's much nicer than the Bencher. It's what I used when I did a lot of Morse. I sold mine a couple of years ago. All I've got left now is an old Navy key with huge enclosed coined silver contacts. Looks like it was made to key a lot of current. It's a little heavy compared to a Speedex, but plenty good enough for me. I don't go that fast anyway.

>should or should not use a "switching power supply" from a PC
>for powering a radio? What are the differences between the P/S's
>that I use and the ones in PC's?

Well, a PC supply only puts out a couple of amps of 12 volts, and
it *needs* a load on the 5 volt output or it'll go out of regulation.
So it's not really a practical option for most uses. Switching
supplies *in general* are efficient and light, but they are more
subject to generating RFI and more subject to being disturbed by
RF. That's why I prefer the old brute force designs like the
Astron.

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin VK2PFQ...

You will recall last week that I told you that I would not be in a position to prepare a Report for you this week as I would not have sufficient time as I was spending the entire week in Western Australia....Well, nothing has changed save for the fact that there a several very important matters that Members must be made aware of prior to the next meeting of Council which will be held this coming Friday evening at 7.30PM...Members only of course.

As some of you may be aware Margaret Morris our office Secretary has resigned as from last Thursday. There is a message circulating..... you guessed it!....on Packet Radio by someone who claims to have all the facts as to the "Whys and Wherefores" of this matter.....It is a great shame that some people will stoop to any depths to score what they see to be..... "points"!!!! Sysops should be careful when allowing such messages to appear on their systems. The one in question is obviously slanderous....Action may be taken.

As President (in inverted commas) for the purists, may I say that I found Mrs. Morris to be most supportive of the Council in the short time in which I worked with her. She will be missed by many of us not he least of which are the "old timers" group which meets every month a Amateur Radio House. Peter Kloppenberg has offered to look after this side of things but....It just won't be the same.... Margaret will be missed. I am sure everyone would join with me in wishing her all the best in her new position.

Margaret has asked me to say goodbye to all the members on her behalf and wishes to thank the many friends she has made over the past five years. She wishes to particularly thank them for their "help and friendship.". Understandably, leaving the Institute's employ after some five years she feels like she is losing "part of her family." Margaret wishes all her friends... "all the happiness in the future." She feels very sad but says and I quote: "It's time to move on to a new phase in life."...unquote.

Another matter which will be discussed at Friday's meeting will be the refusal of Roger Harrison to tender his resignation from the Federal Executive????? I am at a loss to know how he can justify remaining in this position when he does not represent either this Division, the Council, or the members....But, more of this on Friday

Now on to more pleasant things. Part 3 of an account of that IARU Region 3 Conference from David 9VIRH/VK3QV...and I quote.

Working Group B covered, besides Packet Radio, a host of other technical subjects. For instance, beacons....it recommended that a Region 3 Beacon Coordinator was urgently needed and that Region 3 establishes time share beacons on the 14, 18, 21, 24 and 28 MHz bands.

Six beacons are ready to be installed in Japan, New Zealand, Dural in New South Wales, Perth in West Australia, Taiwan and Sri Lanka. It further encourages member societies to establish beacons on 10, 6 and 2 metres. Beacons below 14 MHz are desirable but will need careful planning and international cooperation. It recommended that IARU considers the setting up of a beacon monitoring service for propagation analysis.

Band plans came under scrutiny, specially on VHF and it is recommended that the EME segment be extended from 144.025 to 144.035 MHz to align with Region 1.

As the satellite service, in common with other amateur services, is experimental and self educating, the conference noted the need to preserve common allocations worldwide, specially those above 1 GHz. Member societies are requested to regularly bring to the notice of their administration footnotes 664 and 808 to the ITU International Frequency Table concerning the amateur satellite service.

With respect to IARUMS or, commonly known as the Intruder Watch, all member societies are encouraged to be active in IARUMS and, where possible, enlist the services as well from SWL's. Member Societies are also encouraged to provide specialised equipment, such as is done in New Zealand, to their national coordinator for monitoring check-ups. The conference authorises the IARU Monitoring Service Region 3 to publicise both those Countries which breach the Radio regulations as well as those countries which take positive steps to cease such breaches.

Standards attracted a number of papers. First and foremost, the Conference supported IARU recommendations that type approval of amateur equipment and mandatory inspections of amateur stations should not be enforced because of the nature of the service as per ITU definition. On the EMC Standard's front, member societies are requested to advice the Region 3 secretariat of the name of the relevant national standards body along with a brief description of the relationship between the national amateur society and their national standards body.

The satellite service took up quite some time and it was noted that many amateurs are not aware of the specific amateur satellite band allocations. The most common frequencies being 29.3 to 29.510, 145.8 to 146 and 435 to 438 MHz, plus a range in the SHF spectrum and higher, up to 24.050 GHz. From discussions, it appears that

interference from amateurs in those specified frequencies is, at times pretty high. So now we could have an intruder watch to shoo away fellow amateurs who couldn't care a thing about specialised band plans but are the first to complain if their QSO is being interfered with.

Wind profilers were discussed and from Region 1 came word that the French authorities have been very successful in developing acoustic profilers operating at 200 Hz around their major airports. These units appear to be more accurate than their electronic counterparts. So, there is still hope for us.

Working Group A discussed policy matters and this week I will start with an important policy, namely that Region 3 seeks admission to, and is represented at, meetings of external organisations, when it is considered necessary by the Directors. These external organisations are the ABU, the Asian Broadcasting Union, APEC, the Asia Pacific Economic Council and a new organisation, APT, the Asia Pacific Telecommunity which appears to be similar in concept as the Region 1 CEPT and Region 2 CITEL, an organisation of regional communication administrations.

APT has had a meeting in July last and a quick look through the document did not show any Australian representation. Maybe they were there somewhere, but definitely not noticeable on first sight. The good thing is that APT is very sympathetic to the Amateur Radio Service, as is Region 2 CITEL, also a fairly new organisation.

From conversations I had during off-peak sessions with a few of the delegates I learned that they frown upon any sort of privatisation of the issue of licences and call signs. They like to their own examinations and so forth but there the buck stops. Their administration should still be charged with the issue of licences and call signs as per ITU treaties. They fear that, if they also privatised the issue of licences, their amateurs may loose reciprocity with other countries. Something to think about, specially since in the most privatised country in the western world, the FCC is still the sole body to issue licences and call signs..... That ends part3 of David's informative letters.

Today, as indicated in the preamble to the broadcast sees the return of the technical tapes which used to be a prominent part of these Broadcasts. The series entitled "Australian Radio History" compiled by Winston Muscio was never finished. You will recall that these segments were supplied by Tim Mills VK2ZTM. Tim has been good enough to supply us with those tapes which were never played before. There were 22 Tapes in all. Today sees the series taking up where it left off at tape number 17. There is a short leader from Tim... I have listened to this and consider that he is perhaps entitled to a least one "shot" at his detractors.

To use Tim's words... " This will no doubt cause those with Packet time on their hands to fly into print." Welcome back Tim.

See you all next week.

Federal news
Progress in Radio sport

Amateur radio a sport? Well, if you combine radio direction finding and cross-country jogging, amateur radio becomes a sport! Rather like a foxhunt and footrace, if you like.

It's a rapidly growing aspect of amateur radio in Asia and Europe, and it's taking off in North America (see WIA News, in October Amateur Radio). The object is to locate a series of transmitters spread around a course which meanders through the countryside. The transmitters are turned on and off at sequenced intervals, just to make things a bit more challenging.

Australia's leading exponent of amateur radio direction finding (ARDF) is the redoubtable Wally Watkins VK4CO. Wally's no "spring chicken", so you can see it's a sport for all ages.

Wally refereed at the 7th World ARDF Championships in Sweden, after attending the Region 3 IARU Conference in Singapore. Frank Sleep VK4CAU is competing at the championships in Sweden.

If you want to see what ARDF's all about, Wally has prepared a short video tape, copies of which he has circulated to each Division. Radio clubs may get copies direct from VK4DD for $10 (to cover post and packing). The tape covers highlights from the 1993 Region 3 ARDF games held in China. ARDF games are serious stuff, says Wally. In the tape, emphasis is placed on the importance of the games as can be seen by the many high ranking government officials present.

Wally says, "We were told that if China had won the Olympic Games in the year 2000, ARDF would have been a demonstration sport as it was in the Asian Games a few years ago."

Wally will return from Europe on 6 December. Write to him at PO Box 432, Proserpine Qld 4800.

Meanwhile, ARDF is catching on in Queensland. Several groups are reportedly building receivers based on a design by VK3MZ. The Redcliffe Amateur Radio Club is coordinating activities. It is anticipated that Australia's first radio sport competition will be held in Brisbane early in December.

In the far North, Ron VK4BRG has developed a kit for a 2m antenna based on the successful HB9CV design. In NSW's West, a group at Bathurst is working on an 80m transmitter. Timers for sequencing the transmitter on and off are a bit of a problem, according to Wally. The ZLs are working on an EPROM version while awaiting information to come from Europe which Wally has promised to follow

up while in Sweden.

The South East Radio Group (SERG) in Mount Gambier, SA, will host Wally to give a lecture and demonstration at their annual convention in June next year. Wally is prepared to give a lecture and demonstration to other interested groups while travelling from Proserpine to Mount Gambier, on the basis of being billeted in each area.

The next Region 3 ARDF Championships will be held in Townsville, probably in 1996, a decision made at the September IARU Region 3 Conference in Singapore.

WICEN News

Around twenty people turned up at the Annual Co-ordinators Conference at Bathurst last weekend, and a good time was had by all. A report will appear in a later Broadcast.

This is supposed to be a quiet time for WICEN, but in the past we have had fire, flood, tempest, and earthquake around this time of the year; about all that is left is famine (unfortunately, we may already have this in the form of the drought) and plague (hopefully WICEN will not be involved in that one!), so do not be complacent; keep your equipment ready at all times for a sudden activation.

Events this month include the Central Coast meeting this Friday, the Executive Committee meeting on Saturday, the Hunter meeting on the 21st November, and the closing date for the Newsletter on 30th November.

For next month, WICEN has been requested to assist with the NSW Water Ski Association Ski Racing Division "Lion Island Classic", on Sunday 11th December 1994. Long distance communications are required from Croppy Point to Laughtondale, and this will probably involve 80m. Three stations are needed, from 0900 to 1430, and those interested are invited to contact David Ramsay VK2KLX.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

The Australian National University has unveiled a new thin-film silicon solar cell with a 17 per cent efficiency using a liquid phased epitaxial process to deposit this layer of high quality silicon on a cheaper silicon substrate. According to the ANU this process will lead to solar cells costing as little as 3-4 dollars per watt in a few years' time, compared with between 10-20 dollars per watt today.

Listeners with an interest in practical applications of solar energy will be pleased to know that the Secret of the Sun Solar Energy Conference and exhibition will be held in Sydney at the end of this month. We'll have more details about this in next weekend's bulletin.

****

With our bands coming under increasing pressure, users of spectrum hungry modes of communications such as ATV may be interested in making do with less. A number of Japanese companies are looking to exploit the MPEG 2 video compression standard, for example Toshiba and KDD Corporation have developed a video-on-demand system which allows the user to control the material that appears on their TV screen. Meanwhile KDD Corporation also uses MPEG 2 to cut in half the cost of transmitting news stories over satellite links.

****

The Washington Times revealed this week that in 1991, the United States National Security Agency used pigeons as part of their intelligence gathering operation at the old Soviet Embassy in Washington. It appears that the NSA implanted tiny radio microphones in the chests of the pigeons, and attached wire antennas to their wings.

The pigeons would roost on the windowsills of the Soviet Embassy, and they proved very effective, especially on hot summer days when the windows were left open ...

The report went on to say that the Chinese ambassador to the United States was also bugged, using radio microphones disguised as fallen branches in the Chinese embassy compound, where the ambassador often had outdoor conversations.

****

Listeners with an interest in practical applications of solar energy will be pleased to know that the "Secrets of the Sun" Solar Energy Conference and Exhibition will be held in Sydney at the end of this month. We'll have more details about this event in next week's bulletin.

****

"News Briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Sydney Morning

Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office.

--Richard Murnane VK2SKY

Astronomy Open Night

The Sutherland Astronomical Society presents an astronomy open night for the public.

Come along to the Green Point Observatory Saturday November 12th, 1994.

See : * craters and mountains on the Moon
* double stars and variable stars
* Saturn with its spectacular rings
* The planets Venus and Jupiter
* Spectacular nebulae, open and globular star clusters
* sunspots on the Sun

See different types of telescopes and how they work.
Learn to recognise constellations, planets stars.
Star maps, photographs, slides, videos, magazines, T-shirts, books, refreshments, etc. ... on sale.

Where to go...
Location : corner Green Point Road & Caravan Head Road, Oyster Bay (map ref. 461 A6 - Gregory's, or 313 A6 - UBD).

Admission : ADULTS ... $5 FAMILY $12
CHILDREN ... $2 CONCESSIONS..... $2

iMPORTANT ...
Doors open 1.00pm Saturday (passouts issued)
Wear warm clothing. No need to book, just come along.
Will not be cancelled or postponed due to weather

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club News

Waverley Amateur Radio Society

The next monthly meeting of the Waverley Amateur Radio Society
will be held on Wednesday, 16th November beginning at 7.00 pm at
the club's new premises at

Rose Bay Scout Hall
Vickery Avenue
Rose Bay

The main purpose of the meeting will be to help construct and test
the Society's packet modem kits, so bring along your kit together
with all components and a soldering iron. Experienced advice and
testing gear will be available which should enable your modem to
be up and running by the end of the evening. There are still a few
kits available at a very reasonable price.

Don't forget that the meeting will be at our new premises at :
Rose Bay Scout Hall, Vickery Avenue.

Simon Buxton - VK2EII - Publicity Officer

Blue Mountains Amateur Radio Club Inc. Computer and Communications Show

10 am-4 pm Saturday 26 November 1994, Springwood High School Grose Road Faulconbridge.

* Trade/Retailer stalls & exhibits
* Flea Market
* Colour TV raffle
* Refreshments (Sausage sizzle) and cool drinks
* contact Alex on (047) 573256 to reserve space in Flea Market (under cover).

See you at Springwood!

Alex VK2KAS Publicity Officer

A.A.T.C.

The next meeting of the Australian Amateur Television Club Inc. is on the 2nd Sunday of the month (13th November) at 1.00 pm at Black Muscat Park - Chipping Norton - more details to follow - regarding dress standards of the day.

The technical lecture on the day will be a representative from the SCC a Mr. S. Parks on how to get 11 Kv connected in a domestic situation so as you can run a decent 50 to 80 kW linear - also a short talk from a local council planning committee alderman on getting approval for a 200 foot tower in your back yard. TVI & shadow rules to be discussed.

Thanks go to the members of the AATC for attending the Printed Circuit Board Workshop free Make a Board Day - numerous PCB's were made and a better understanding as to commercial production was appreciated. The AATC will hold the annual All Amateurs Day, early next year - contact the AATC for more info - or see us at 1995 Wyong for starters. A CAD - PCB drawing assistance information day will be conducted prior to the next PCB open day next year to assist beginners in design.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater anytime. Also you can ring the Publicity Officer on (02) 587-3491 bus. hours.

AATC Inc. Publicity Officer Bob Barnes VJ2R

Parramatta

The next meeting of PARC (the Parramatta Amateur Radio Club) will be held on the 17th November starting at 19.30 hours at 109 Wigram Street Parramatta.

A report from Singapore will be given by Roger Harrison VK2ZRH, entitled "What's happening on the international scene". So if you want to hear the latest, do come along as guests are always welcome and, as usual, supper will be provided.

from Jim Walker VK2XJW Club President

Radio Amateurs Old Timers Club

Members and friends of the Radio Amateurs Old Timers Club are reminded that the next series of broadcasts and call backs will take place on Monday November 7th.

Times and frequencies will be as follows:

10 AM. MELBOURNE TIME (2300 ZULU)
145.700 MegaHertz FM
AND
7.060 Megahertz LSB
3650 MegaHertz LSB

11 AM. MELBOURNE TIME (0001 HOURS ZULU)
14.150 MegaHertz USB beaming NORTH
from Melbourne

12 NOON MELBOURNE TIME (0100 HOURS ZULU)
14.150 MegaHertz USB beaming WEST
from Melbourne

8.30 PM MELBOURNE TIME (0930 HOURS ZULU)
3650 MegaHertz For the benefit of members
of friends who, for whatever
reason are unable to hear any
of the morning transmissions.

Callbacks will follow all six transmissions.
News for inclusion in the club broadcasts will be welcomed by Club Secretary Arthur Evans VK3VQ or Allan Doble VK3AMD both of whom are OK in any call book.

Great Lakes Radio Club

Mrembers are reminded that our last meeting for 1994 will be on 25th November, and that at this meeting we will be farewelling Stephen Linden, VK2IBD, who will shortly be returning to the U.K. after twelve months exchange teaching, during which time he has made many friends amongst club-members.

This item from Stan Ellis VK2DDL

Illawarra

The Illawarra Amateur Radio Society will be having their annual auction on the 8th November (Tuesday) at the SES Head Quarters Montague St. North Wollongong.

All items to be booked in by 7.15 pm for a 7.30 pm start. We hope to see you there.

Submitted by Ken VK2KWG Club President

Liverpool

The next meeting of the Liverpool and Districts Amateur Radio Club Inc. is to be held on Tuesday night 8th November at 7.30 pm at the Scout Camp Cambridge Road Glenfield.

The guest lecturer will be Richard VK2ARS who will be giving a talk on essential equipment for the ham shack. This will be a valuable talk for all beginners and doyens alike and even might get you home brewing some test gear.

Don't forget the 2 metre mobile foxhunt and Christmas barbecue will be held on Sunday morning 27th November. Dust off your old direction finding antennas and sniffers and be at the starting point in the carpark of the Liverpool Swimming Centre at 10am. Mark it in your calendar now -- Sunday 27th.

See you at this Tuesday night's meeting for another great talk from Richard VK2ARS.

from Brad VK2QQ Publicity Officer

From the VHF to SHF DX Interest Group

Special Note. The Group's net has a new starting time of 11:00 Australian Eastern Daylight Saving Time (AEDST) i.e. after the end of the morning broadcast. The net is held on 146.5 MHz FM.

The SSB activity night on 2 metres is still being held every Tuesday evening 20:00 to 21:00 AEDST. It is well patronised but certainly we would like to see some new stations so let's see you there and join in the fun.

The SSB activity night on 70cms is still being held every Thursday evening 20:00 to 21:00 AEDST. It is well patronised but we would certainly like to see some new stations so let's see you there and join in the fun.

The group's talk night on 22nd November 1994 will be to discuss and begin to put together what is required to build a two metre low noise preamplifier. (What device to use, techniques, selection of ccts, etc.)

Richard Soulie VK2ARS Publicity Co-ordinator

From: jerry@bashful.isi.com
Message-ID: <39mj1p$8mq@bashful.isi.com>
Source record: 257273

In article <RFM.94Nov4105048@urth.eng.sun.com> rfm@urth.eng.sun.com (Richard McAllister) writes:

>Why is the ARRL Sweepstakes exchange so very long? And what was the
>original reason for the QSO counter? Surely it predates fancy keyers,
>so it can't be just a plot by keyer manufacturers to increase sales.

The serial number is probably to allow the ARRL to cross-check the logs
to make sure people don't just look up a bunch of calls in the callbook
and write them in their logs.

JS> I have an yaseu FT-11R and want to unlock it to operate on CAP/MARS
JS> freqs. A local dealer will do it for 75 bucks. That sound high to me.
JS> My FT23R only took me about 5 min and removing a solder jumper.
JS> Does anyone know where I can get the proceedures???

You should be able to get the mod from the dealer you got the radio from.
Also 75 does sound steep Communication Headquarters, Inc. Will do it for 58
dollars.

>code practice
If you want to practice, why not practice what you're likely to hear in the real world?
> I've tried a couple of computer programs playing through both the computer speaker and a
>Soundblaster, but neither method is of acceptable quality when recorded on tape.
What's 'acceptable' quality? If you want real world, a fifth-generation cassette copy
might be 'better' than something hi-fi.

Nothing intrinsically wrong with Q&A pools if the pool is large enough
that it is impossible to memorize ALL of it.

Check with the Maryland Radio Center in Laurel, they test every third
Saturday last I heard.

The Bryantown-Zekiah Swamp VE (ARRL) group in Charles County MD is
holding a test session on 20 Nov.

I know neither are Baltimore county/city, but not that far away.

>
> I am going to be in that area and I wanted to take the test this weekend.
>
>

Hi Michael, we have a different exam site each weekend here in San Diego.
You can call 619-465-exam for a recording on where the site is located.
However, they usually like 10 days advance notice. It can get crowded,
and some sites do not take walkins. The SANDARC VE prg gives there exams
on Sat mornings, and the SANDARC group does not charge!! That is where
the proceeds go from our convention that is held here about every 4
years. If I can be of any further help, please let me know.

>> leaving $5.25 of the original $12.00 from the examinees.

> Are you saying that some of the exam fee went to paying for refreshments?

When I went to take my exam a few months ago from the local SANDARC group here in San Diego CA, I kept waiting to pay somebody, but it turns out that they never charge. Just their policy I guess.

They provided the test materials, postage, and manpower all for free without even mentioning any costs they might have. Fine folks. They seemed entirely motivated by the passing grades they got to sign off. :-)

Anyway, if I ever go back to take another test, I think it would be cool to bring bagels or doughnuts or something to say thanks. There weren't any refreshments there last time, and I was there for a few hours.

Revision: 1.7 10/23/94 20:52:50

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@oes.amdahl.com (Santa Clara, CA, USA)

Paul Schleck KD3FU pschleck@gonix.com (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Please Send Questions to the Newsgroups, Not the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

2039. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-08 07:21:30 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html
file://rtfm.mit.edu/pub/usenet/radio/ham-radio
all radio FAQs & info:
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html
wais://rtfm.mit.edu/usenet/radio

University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 486 PC at home with
over 70 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at "ham-server@grafex.sbay.org". This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server contains many plain-text
articles along with programs for MS-DOS & Windows, Unix, Mac, and
OS/2.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

Submissions for inclusion in the HAM-server may be mailed in UUENCODED
format to "incoming@grafex.sbay.org".

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)

has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here

is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes not running Unix, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 198.137.220.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it. (The FAQ does not print IP addresses any more because they change so often.) Your system may not recognize the "fully-qualified domain name" (like callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP number if their network is reachable from yours.
* If you get "network unreachable" check with some more knowledgeable users if your site is actually connected to the Internet. If it is, a link in the network may be temporarily disconnected for maintenance (or by accident.)
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet to the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent. Also, at many education sites, it is common practice to block telnet connections above TCP socket 1000 or so in a somewhat misguided attempt to block usage of "recreational" TCP socket applications such as Multiple User Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases, a polite word to the system administrators, pointing out the worthwhile services available on sockets 2000 and 3000 will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ. Some common command syntaxes are: (angle brackets are for

readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for
CAP radio information, these rec.radio.amateur.* groups are available.
CAP-related files are also stored on the FTP site
sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter
band. It was first conceived when propagation was poor on 10 meters,
as a method to get more hams to use 10 meters. The past few years
have been great for 10 meters worldwide. However, "the bands are
closing down" again, and 10 meters will once again be limited more
for local communications, except for sporadic band openings, until
the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call
sign, operator's name and location. Send the list to your numeric
call sign or DX area manager (as shown below), with $5.00 U.S. new
membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently-
-created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

2040. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-08 07:22:26 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)

KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

: differences, and at least some people will stand up for what
: they believe.

Derek certainly had the guts to state his feelings. He certainly has
not bowed down to any expectation that he has to be nice to everyone.

Have you considered the possibility that he was not insulting in order
to create humour, but used humour as a tool in winding some people up?

I'm glad that people are different, it makes the world a more
interesting place. As long as people can tolerate the existance of
different people, those differences can be great strengths. People like
Derek who stir people up are important as sometimes they stir people
into examining themselves from a new perspective.

Derek's quite a decent bloke, but he does tease people. You can tease
him back and make him think about himself. Humour is probably the most
powerful weapon possible. Hitler was not much angered by successful
allied commanders compared to how Chaplin in his parody "The Great
Dictator" got to him, according to a historian friend. I don't think
that anything not tipped with humour will get past Derek's defences,
he's a pretty hardened cookie :-)

Cheers

> others who have this repeater.

We've got an ICOM 2 meter repeater on our company club machine. I have not been particularly happy with its performance, it doesn't have the world's greatest front end. I'm use to Motorola machines or GE radios. The ICOM is fair at best. If you're in a low RF noise environment, it probably will be OK.

As for interfacing to another controller, ours is interfaced to an ACC RC850. Not too difficult, just a few wires and then tweaking some audio levels.

There are alot of other options for 440 repeaters. Perhaps one of the best is to get a GE mobile radio or Motorola Micor for UHF and convert it to a repeater. If you don't have someone technically inclined in your group enough to do that, then take a look at Hamtronics, a company out of NY. I know several groups that are pleased with their repeaters and they cost A LOT less than the ICOM machines, and they have better customer support. They're listed each month in QST.

From: hysell@itc.Kodak.COM
Message-ID: <9411081146.AA13328@runner.itc.Kodak.COM>
Source record: 257141

Hi all;
Does anyone have any information on the Dentron digital display board that
Dan's Small Parts and Kits sells? Dan includes a parts placement and a
schematic diagram, but no backgound info, usage info or troubleshooting ideas.
Any pointers to a magazine article, etc would be very helpful.
-thanks and 73

> Thanks.
>

Your gonna need to drill.

I've cut thru the siding and the box joist with a hole saw and inserted a length of PVC pipe. Then glued on a 45 degree elbow pointing down at the outside, and another short length of PVC, so the water stays out. RTV around the PVC to the siding and the inside of the box joist. Run your cables. I then installed pipe caps, with slots cut to clear the cables, on both ends (not glued). This keeps out the rodents and the big bugs. You can also stuff a little fiberglas insulation into the inside pipe end to keep out the drafts.

I have used 1" PVC, and it works ok for a few cables. You can use 1-1/2 for more/bigger. You can also install a dryer vent pipe and vent cap. Run your cables thru, and stuff it with fiberglass to make it weathertight.

I also thought about mounting an outdoor box, and making up a plate that I could drill for bulkhead type N connectors. If you move, you could always change the cover plate and make it into an outdoor pewer receptacle.

Some hams replace a window pane with a plexiglass sheet that they then drill feedthrus in. Some also make a false window sill, that is split and drilled for the cables.

Cross-posted to: aus.radio,rec.radio.amateur.misc,rec.radio.info

My apologies if you are seeing this twice; I had a hiccup in
my local news server, and it was impossible to tell whether
it got out - all I saw was some strange error message! DH.

[ANARTS - Australian National Amateur Radio Teletype Society]

A.N.A.R.T.S. News Bulletin 834 6th November 1994

NEWS FROM THE WEST

THE CONTROL OF THE RELAY OF THE VK2 RTTY BROADCAST IN W.A. HAS
PASSED TO THE W.A. RADIO OLD TIMERS CLUB, WHICH HAS TAKEN UP
THE CALLSIGN OF VK6TTY AFTER IT WAS RELINQUISHED BY THE
WESTERN AUSTRALIAN AMATEUR DIGITAL COMMUNICATIONS ASSOCIATION.

UNFORTUNATELY THIS HAS ALSO MEANT THAT THE BROADCAST OFFICER
FOR THAT ASSOCIATION HAS RESIGNED FROM THE POST, BUT THE RTTY
BROADCAST NEWS FROM VK2 WILL CONTINUE TO BE RELAYED IN W.A. BY
CLEM VK6CW USING VK6TTY WHICH HE NOW HOLDS FOR THE
W.A.R.O.T.C..

THE 2 METRE RTTY MAILBOX IS ALSO LIKELY TO BE RELOCATED ON A
HF FREQUENCY IF USAGE REMAINS AT THE PRESENT LOW LEVEL, EVEN
THOUGH RTTY BROADCASTS HAVE NOT AVAILABLE TO AMATEURS FOR THE
PAST FEW WEEKS DUE TO LACK OF A CALLSIGN, AND BECAUSE OF THAT,
MEMBERS MAY HAVE NOT BEEN MADE AWARE OF THE AVAILABILITY OF
THE RTTY BULLETIN BOARD.

THANKS TO CLEM VK6CW FOR THAT INFORMATION

A LITTLE WHIMSY FROM VK6TN (Ernie), originator was VK6UE (Bill).

GETTING OLD

JUST A LINE TO SAY I'M LIVING,
THAT I'M NOT AMONG THE DEAD
THOUGH I'M GETTING MORE FORGETFUL
AND MIXED UP IN MY HEAD.

I'VE GOT USED TO MY ARTHRITIS
TO MY DENTURES I'M RESIGNED
I CAN MANAGE MY BI-FOCALS
BUT OH GOD I MISS MY MIND.

SOMETIMES I CAN'T REMEMBER
WHEN I'M STANDING BY THE STAIRS
IF I SHOULD BE GOING UP FOR SOMETHING
OR IF I'VE JUST COME DOWN FROM THERE.

AND BEFORE THE FRIDGE SO OFTEN
MY MIND IS FILLED WITH DOUBT
NOW DID I PUT SOME FOOD AWAY
OR COME TO TAKE SOME OUT.

SOMETIMES WHEN IT IS NIGHT TIME
WITH MY NIGHTCAP ON MY HEAD
I DON'T KNOW IF I'M RETIRING
OR JUST GETTING OUT OF BED.

IF IT'S NOT MY TURN TO WRITE DEAR
I HOPE YOU WON'T GET SORE
I THINK I MAY HAVE WRITTEN
AND DON'T WANT TO BE A BORE.

SO REMEMBER I DO LOVE YOU
AND WISHED THAT YOU LIVED NEAR
BUT NOW IT'S TIME TO MAIL THIS
AND SAY GOODBYE MY DEAR

AT LAST I STOOD BESIDE THE MAILBOX
MY FACE IT SURE GOT RED
INSTEAD OF MAILING THIS TO YOU
I'VE OPENED IT INSTEAD.

COURTESY OF BILL VK6UE

IPS WEEKLY REPORT
---

28 OCTOBER - 3 NOVEMBER

ISSUE No 44

DATE OF ISSUE: 4 NOVEMBER 1994

INDICES:

DATE 28 29 30 31 01 02 03

10CM 97 98 98 97 92 91 87
A 2 34 32 32 14 19 (12 ESTIMATED)
T 41 43 -13 11 10 20 22

SOLAR ACTIVITY WAS LOW 29TH OCTOBER, AND VERY LOW FOR THE
REMAINDER OFTHE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET TO UN-
SETTLED 28TH OCTOBER, UNSETTLED TO ACTIVE ON 29TH WITH MINOR

STROM LEVELS 0900-1200 UT AND MAJOR STORM LEVELS 1200-1800 UT.
THE FIELD ON 30TH WAS MOSTLY ACTIVE WITH A SHORT MINOR STORM
PERIOD, AND AGAIN ON 31ST THERE WAS A SHORT PERIOD OF
MINOR STORM LEVELS WITH THE FIELD MOSTLY UNSETTLED OTHERWISE.
ON 1ST-2ND NOVEMBER THE FIELD WAS UNSETTLED TO ACTIVE,
REDUCING TO QUIET TO UNSETTLED ON 3RD.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED
MONTHLY VALUES ON 28TH OCTOBER WITH 15-30 PER CENT ENHANCE-
MENTS FROM 0500-1700 UT. ON 29TH FREQUENCIES WERE ENHANCED 20-
40 PER CENT 0300-1300 UT, DEPRESSED BY 25 PER CENT 2200-2300
UT, AND NEAR NORMAL OTHERWISE. THERE WERE SHORT DEPRESSED
PERIODS OF UP TO 40 PER CENT OVER 30TH OCTOBER-1ST NOVEMBER,
OTHERWISE NEAR PREDICTED VALUES. FREQUENCIES WERE NEAR PRE-
DICTED MONTHLY VALUES ON 2ND-3RD.

FORECAST (4TH-10 NOVEMBER)

SOLAR: VERY LOW TO LOW.

GEOMAGNETIC: QUIET TO UNSETTLED.

IONOSPHERIC: NEAR PREDICTED NOVEMBER VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

VK2SG RTTY DX NOTES 28 OCT 94

VK2SG RTTY DX NOTES FOR WEEKENDING 28 OCT 94 (BID RTDX1028)

A POINT TO PONDER. I'M RECEIVING FROM THE PACKET NETWORK OLD
BULLETINS (E.G. ARLD, ARLP, ARLB, OPDX, RTDX AND OTHERS) BUT
WITH DIFFERENT BULLETIN IDENTIFICATION NUMBER (BID) FROM THE
ORIGINAL ONE. THE REMOVAL OF THE BID REPLACED WITH A LOCAL BID
NUMBER HAS CAUSED CONFUSION AND SOME BBS SUFFER THE MULTIPLE
DELIVERY OF THE DX NOTES AND BULLETINS WITH DIFFERENT BID NR.
CHANGING THE ORIGINAL IDENTIFICATION ONLY LEADS TO THE SAME
BULLETIN ARRIVING AT A BBS FROM VARIOUS SOURCES MANY TIMES,
THIS CAUSES THE BBS TO BE FILLED WITH REDUNDANT AND REPETITIVE
INFORMATION THIS ALSO CAUSES THE SYSOPS MANY HOURS OF NON
PRODUCTIVE WORK. THINK ABOUT IT.

OUR THANKS THIS WEEK GO TO ZS5S, W2JGR, WB2V, W5KSI, W6PQS,
WA6PJR, PA0HVF, DL8AAM, I5IGQ, I5ICY AND IK5PWJ PACKETCLUSTER,
THE INTERNATIONAL RTTY DX ASSOCIATION AND THE NJ0M NODE OF THE
MINNESOTA DX PACKET CLUSTER NETWORK.

NOTES OF INTEREST:

SOUTH SHETLAND, HF0. THE INTERNATIONAL RTTY DX ASSOCIATION HAS DONATED A HAL TELEREADER RTTY TERMINAL FOR USE AT HF0POL, THE POLISH ANTARCTIC EXPEDITION BASE ON KING GEORGE ISLAND IN THE SOUTH SHETLAND GROUP. THE OPERATOR, ANDY, SP2GOW, HAS BEEN TRAINED ON THE KEYS BY WALD, SP4KM. SINCE IT MAY BE SEVERAL MONTHS BEFORE ANDY GETS TO THE BASE AND APPEARS ON RTTY, KEEP AN EYE ON THE VK2SG DX NOTES FOR UPDATES.

UNITED ARAB EMIRATES, A6. DON, WB2DND WILL BE IN DUBAI FROM 11 TO 16 NOV. AND WILL OPERATE A61AD AS TIME PERMITS. HE SUGGESTS WEST COAST U.S.A. LOOK FOR HIM ON EITHER 14025 KHZ CW OR 14090 RTTY AT 1300Z (AROUND HIS SUNSET). HE WILL CONCENTRATE ON 80/160 NEAR 0200Z (AROUND HIS SUNRISE), BUT DID NOT SPECIFY MODE.

UGANDA, 5X. EUGEN, 5X4B (FORMERLY DL8AAI, 5Z4FU) AND HIS XYL SANDRA, 5X4A, ARE ACTIVE FOR AT LEAST ONE YEAR FROM KITGUM IN

NORTHERN UGANDA. THEY ARE THE VERY FIRST AND ONLY HAMS IN THE THAT AREA. QSL VIA DL8AAM THOMAS M. ROESNER NARZISSENWEG 11, D-37081 GOETTINGEN. BE PATIENT IT WILL NEED SOME TIME TO GET LOGS AND PRINT THE QSLS.

SEND BANDPASS AND NOTES FOR NEXT WEEK BULLETIN TO JULES, W2JGR AT W2TKU.#SRQFL.FL.USA.NA OR AT W5KSI.#NOLA.LA.USA.NA.

GL DE (DX2) LUCIANO, I5FLN AT ZS5S.ZAF.AF

LATE INFORMATION

NOV. 2 NOV. 3
0805-14.006 G0SPO 0800-14.087 PA3AET

ARLD064 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Bob, KA1XN, Chod, VP2ML, The DX Bulletin, Adam, N7VEW, Mathieu, F5SHQ, Tedd, KB8NW, the OPDX Bulletin, the Uankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SOUTHERN SUDAN. John, PA3CXC, is on signing PA3CXC/ST0. Check 18075 kHz between 1800 and 2200z, 7005 kHz around 0315z and 21020 kHz after 2200z. QSL via his CBA.

TOGO and CAMEROON. Adam, N7VEW, QSL manager for missionaries 5V7MD and TJ1JR, has announced the following skeds. Wednesdays at 2230z on 14165 kHz with TJ1JR and Thursdays at 2200z on 14165 kHz with 5V7MD. After the skeds 5V7MD or TJ1JR will usually hang around or move up the band to work some stations. QSL TJ1JR and 5V7MD to N7VEW at his 1994 CBA with an SASE. Please, no bureau cards.

MACAO. G3SXW and G3TXF are active as XX9SXW and XX9TXF. `They operate mostly CW.

80 METERS. A group of Asian operators including EX0V, EY8MM, UN7VV and AP2SD, are on a daily lookout trying to work west coast stations. Try 3795 kHz between 1200 and 1400z.

U.A.E. Don, WB2DND, will be visiting Dubui from November 11 to 16. Listen on 20 meters at 1300z on either 14025 kHz CW or 14090 RTTY, 14240 SSB at 2100z and 80/160 meters each morning at 0200z.

CUBA. A group of Cuban and Portugese hams will activate CO9OTA in the archipelago Jardines de la Reina between November 7 to 9.

Arnie, CO2KK, is now active on 160 meters. QSL via Arnaldo Coro, PO Box 6060, Habana Cuba 10600.

TAIWAN. WB4IUX plans to be in Taiwan either November 7, 8 and 9 or 16, 17 and 18. He is working feverishly on getting permission to operate. If he can secure this permission, plans are to operate almost exclusively 80 and 40 meters to give low band operators a chance for BV. Look for him in the 7008 to 7012 and 3508 to 3512 windows.

BELAU/YAPP. Lim, WV5S, and Coy, N5OK, of the Oklahoma DX Association will be returning to Yapp. Listen for V63SH and V63OH between November 2 and 9. Some RTTY.

MADAGSCAR. JA1OEM will be on from Madagascar as 5R8HP from November 1 to 20.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

Hi.

I'm sorry I missed the start of this. Anyway, W (sorry I don't know your name), having read your posting I have now formed an opinion on your strong beliefs and also your spelling. However, what is your attitude to Morse Code?

This is a wild stab looking for help in locating someone. I don't have radio but thought ham tradition might come to the fore.

Someone I have not seen in ten or twelve years now works in Singapore for an organization called Asia Emergency Assistance. Her name is Dr. Sandra Johnson. I have exhausted all the WHOIS servers I can find but have been unable to identify a possible domain and her e-mail address. Any help would be greatly appreciated, via e-mail, please!

I have one. I've converted it to 10 mW output for driving transverters,
which I build myself. I've almost bought the Chipswitch uProc, but I'm
using my IC-726 as a 50 MHz XVTR Driver, so the Uniden gathers dust.

Anybody have the Chipswitch uProc in yours? How do you like it?

If you're certain they're selling one, can you post a catalog number?
My latest catalog doesn't show a VHF/UHF meter, and several local hams
and an RS salesman have told me they stopped selling them about a year
ago.

Ben, I've reformatted your post to <80 characters per line.

If by your first question you are implying that I should listen to
on-the-air CW for practice, I do. At home, with my rig. However,
I also have about four hours per day of bus commute that I'd like
to use to improve my speed from 5wpm to 13wpm. Making tapes
and listening to them with a personal stereo and headphones
seems like a reasonable way to accomplish that. Unfortunately,
with the wide frequency response of today's stereo headphones,
listening to a square wave signal, complete with key clicks
and a DC bias, is only slightly less painful than CW via
fingernails on a chalkboard.

Why would I like a clean, pleasant Morse audio source? So I
can concentrate on copying the code, instead of gritting my
teeth in response to the screeching in the headphones.

So if you, or anyone else, has seen any code practice oscillator
circuits that generate sine wave audio without keyclicks and
other annoyances, I'd be grateful for the information.

Well, egg on MY face. You're right, it's been discontinued. You might call around to other RS stores, though - I saw one of these on the shelf of a local Rat Shack a couple of months ago. There might be a few still stocked here and there.

: Astron.

You can of course get switching supplies for just "12" volts, but there remain the RFI and IRF problems, and one other: switching supplies often don't like loads that vary a lot, like keyed or SSB-modulated HF rigs would be. A _properly_ designed and constructed supply should be fine, but don't expect to find that in a cheap supply.

2062. DXbase Interface Problem Survey

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-08 18:25:19 UTC
From: mikewood@mercury.interpath.net
Message-ID: <39ofqf$rq3@mercury.interpath.net>
Source record: 257157

I am posting this for K5ESW who has not arranged Internet access since retiring from IBM. I have the same problem with DXBase and have tried four different serial cards to try to accommodate the flaky serial port routines provided with DXBase 3.0 for HF radio control. I have purchased a buffered 16550 type serial card in desparation , hoping it will be the "workaround" needed. This problem exists in at least DXBase versions 2, 3 and 4. I have NO other programs that have any serial port problems with my hardware configuration (which is standard). My Hardware: 486dx2 (33 MHz), COM1 / COM2 / LPT1 used with standard addresses and IRQ, 200 MB IDE Hard Drive and VGA video card; HF Radio Kenwood TS950SD with IF232 interface box.

IF YOU CHOOSE TO RESPOND TO THIS SURVEY, PLEASE DESCRIBE YOUR HARDWARE (INCLUDING HF RIG INTERFACE) EVEN IF YOU DON'T HAVE THIS PROBLEM.

K5ESW's DXBase SURVEY / Problem Description follows.

****

From: K5ESW Date: 6-Nov 1453Z Subj: DXbase & HF Rig Problem Survey

I use DXbase 3.0 and have been happy with it except for one problem. When I first start DXbase I often get a message "Unable to link to radio".

After this message the only way to get DXbase to talk to the HF rig interface is to go to the QSO LOG menu, choose USER SETUP, choose USER PROGRAM OPTIONS, and then hit Escape. This causes DXbase to reinitialize communications with the HF rig. I usually have to repeat the entire sequence several times before the rig interface is successfully established. If I do not notice the "Unable to Link to radio" message I sometimes log a QSO on the wrong band because DXbase will use the last band logged if the HF radio link is down.

I called Dean, W8ZF, and asked him about the problem. He said this was uncommon and suggested it might be due to an interrupt conflict. I have looked my system over and cannot find an interrupt problem. My hope was Dean would tell me they had improved the error recovery in DXbase 4.0, but he said there have been no changes in this area. I would like DXbase to retry initialization with the HF rig after an error. This would save me from going thru the awkward manual method mentioned above.

You can reproduce the above failure my simply leaving the radio off at the time you start DXbase. The user's manual says that my situation

is expected but rare. Page 104 says,"4. Timing was out of sync at the instant initialization was attempted. This situation is classified as normal, but it should rarely happen." My failure is certainly not rare.

Are any other users experiencing this failure? Send me your comments and I will post a summary message.

Also how many of you are using DXbase but DO NOT use HF rig control at all ? Maybe the DXbase developers think the problem is rare because most of the users don't use the HF radio control features and therefore never experience the problem.

I checked with the developer of Logic4 to see how they handle the radio interface. He said they do not try to remain in sync with the HF rig. They initialize the interface every time Logic4 needs to communicate with the HF rig. I ordered a demo disk to try it out.

My particular setup here is an ICOM 765 with the rig interface on COM3 using IRQ 5 (normally reserved for LPT2). My TNC is a PK-232 connected to COM2 using IRQ 3. I have a data/fax modem on COM1 using IRQ 4. I run Windows 3.1 and use DXbase in a DOS window.

Boston area Hams,

I know two repeaters in Boston area: 145.23MHz(-600kHz) and 146.64MHz(-600kHz).
Does any of the two repeaters offer Phone Autopatch service?
If yes, how to access?, or where to get the info?

Are there other 2-meter repeaters in Boston area (with or without autopatch)?

Thanks

> between each hot leg 230/240 vac?
>
William,

Australia uses a three phase power distribution system, each phase
120 degrees to each other and having a nominal voltage of 240V to the
neutral (nominally at earth potential). Not every building will
all three phases and neutral (415V supply - the voltage between
phases) - most domestic installations and power points etc use one
phase to neutral (i.e. 240V). The frequency of supply here is 50Hz
but that should not be a real problem with most gear.

For US gear 240-115 Volt autotransformers are fairly readily
available, and most hotels etc have wall fittings that will supply
115v in US style sockets - but only enough juice for shavers etc.

Most European gear is no problem (being 220v) although I have been
aware of some transformer supplies running hot because the extra 20v
was pushing the transformer into saturation.

Finally most switchmode supplies (and for that matter a LOT of
transformer supplies) can be readily changed from 115v to 240v
usually by changing a jumper or a switch - as I said, normally the
frequency change does not cause too many hassles.

>If you've been successful with this combo, I'd appreciate hearing from you.

>Thanks.

I have done test with the IC481H, the 430 MHz version. I found it to
be totally unacceptable for 9600bd :
- tx-rx turnaround times are more than 100ms
- tx is a VCO modulated PLL transmitter. There is a big peak in the
modulation response around 41 Hz.
However, receiving was ok. So i guess our tests are'nt compatible..

I own a Hamtronics 440mhz repeater. Its an absolute piece of shit. I replaced
the final amplifier stage twice. Their customer support is next to useless
"well, it worked when it left here. sorry, no refunds."

I've subsequently purchased an ICOM. Its wouldn't be my first choice if I
wanted all sorts of CB bells and whoops. But, I don't. And, it works fine,
given what it offers. I know a few others that have ICOM repeaters w/
external controller add-ons. Seems to work okay, if you want the glitz.

It seems to depend more on the whims of the DXAC that anything I've
ever seen in writing. The very idea of a group of hams erecting
scaffolding on a rock barely visable at low tide in order to put a new
"country" on the air is a complete, pathetic, farce.

Was I the only one who noticed that people weren't ID'ing on the nets?
I listened to a few 440 nets, and everyone was either using tactical calls
or the suffix of their callsign. Here in Boston, we allways (most of the
time :-) give our callsign as part of handing it back to net control after
the last transmission in an exchange...

For apartment or other installations where you can't/don't want to drill
through walls or windows, you can make a simple feedthrough using two
pieces of lumber, which you then close the window on, keeping
drafts out. Sandwidth the two pieces of lumber together with C
clamps, and then drill holes of the appropriate diameters for the
cables you need to pass through, with the holes centered at the junction
of the two pieces of wood. Sample:

```
| |
| SLIDING WINDOW |
|_____________________|
|_______/\_____/\_____| <- top piece of wood
|_______\/_____\/_____| <- bottom piece of wood
```

(The diamond-shape holes are supposed to be circles, but as we all know,
programmer's shouldn't attempt to do art.)

Drill more holes than you need initially to save labor later, and plug
the unused holes with pieces of rag or dowels or corks from wine
bottles. As you need to add/remove cables, you lift up the window,
take off the top piece of wood, and lay down the new cable, and
reassemble. Doing it this way instead of drilling holes in
a single piece of wood allows you to get cables in/out while
the connectors are attached.

If you pick two pieces of wood that are narrow enough, the window will
still shut enough so that you probably won't have to do anything special
to keep drafts from coming in where the top half and the bottom half
of the window meet (where the latch is).

For drilling, the dimensions of the common sizes of cables are listed below:

RG-58 size - .195" (use 13/64" or 7/32" bit)
RG-8X/RG-59 - .242" (use 1/4" or 9/32" bit)
RG8 - .405" (use 13/32" or 7/16" bit)

(The smaller of the two bit sizes listed above should make a tight fit to keep
the cables from pulling in/out).

Is it tougher to learn Morse code when you're ...um.... more mature?
:<) In other words, do younger folks have an edge when trying to learn
CW -- especially at the faster speeds? Or do you think that, given equal
desire, someone 60 could learn 13 wpm or 20 wpm just as fast an an 18
year old?

2074. Motorola Amateur Group????

>73 de N9WYS

there's effectively no amateur market when you look at the size of other markets --- look at the number of cell radiophones sold in your town this month vs the number of new hams nationwide this year and i'll bet the cell radiophones come out on top.

plus it seems you can't bring in an amateur product w/o lots and lots of customer support -- it's almost a surprise that packet goes as well as it does given that there's no standard interface between the radio and the TNC that would let you usually use a one-size-fits-all cable...
